COVER

Crystal structure of a molybdenum oxide nanowheel, 2.6 nanometers in diameter, around a smaller molybdenum oxide cluster. Miras et al. (page 72; related Perspective page 38) used a controlled-flow reactor to show that the central core serves as a transient template for the self-assembly of the nanowheel and is ultimately ejected to yield a hollow finished product.

RESEARCH ARTICLE
52 Dendritic Mechanisms Underlying
Rapid Synaptic Activation of Fast-Spiking
Hippocampal Interneurons
H. Hu et al.
Potassium channel enrichment in the
dendrites of hippocampal basket cells defines
a mechanism of neural network function.

REPORTS
58 An Unusually Fast-Evolving Supernova
D. Poznanski et al.
The distinctive properties of this supernova
suggest that it is of a kind predicted by theory
but not previously observed.

60 Polarity-Induced Hole Doping in
Wide-Band-Gap Uniaxial Semiconductor
Heterostructures
J. Simon et al.
A compositional gradient of two semiconductors
creates an electronic polarization that ionizes
and activates dopant atoms.

64 Translocation of Single-Stranded DNA
Through Single-Walled Carbon Nanotubes
H. Liu et al.
Transfer of DNA by electrophoresis through
some carbon nanotubes is accompanied by
giant current pulses.

68 Solid Nanoparticles That Catalyze
Biofuel Upgrade Reactions at the
Water/Oil Interface
S. Crossley et al.
Oxide nanoparticles bearing carbon
nanotubes and functionalized with palladium
act as both emulsifiers and catalysts.
>> Perspective p. 41

72 Unveiling the Transient Template
in the Self-Assembly of a Molecular
Oxide Nanowheel
H. N. Miras et al.
Use of a flow reactor reveals a key
intermediate in the formation of a
molybdenum oxide nanostructure.
>> Perspective p. 38

75 Synchronous Deglacial Overturning and
Water Mass Source Changes
N. L. Roberts et al.
Large-scale ocean circulation changed in
different ways during a millennial-scale
climate event.

78 Human Genome Sequencing Using
Unchained Base Reads on Self-Assembling
DNA Nanoarrays
R. Drmanac et al.
A low-cost sequencing technique advances
us closer to the goal of the $1000 human
genome.

81 Structure and Mechanisms of a
Protein-Based Organelle in
Escherichia coli
S. Tanaka et al.
Structures of the shell proteins from a
bacterial organelle help to explain how it functions in metabolizing ethanolamine.
>> Perspective p. 42

84 The Tasmanian Devil Transcriptome
Reveals Schwann Cell Origins of a
Clonally Transmissible Cancer
E. P. Murchison et al.
Sequencing the Tasmanian devil facial tumor
disease provides a potential diagnostic marker.
>> Science Podcast

88 O-Mannosyl Phosphorylation of
Alpha-Dystroglycan Is Required
for Laminin Binding
T. Yoshida-Moriguchi et al.
A posttranslational sugar modification
required to prevent certain dystrophies
is identified and characterized.

91 The Rate and Molecular Spectrum
of Spontaneous Mutations in
Arabidopsis thaliana
S. Ossowski et al.
Rapid sequencing technologies allow
a more accurate calculation of the
mutation rate for plants.

94 Targeted 3′ Processing of Antisense
Transcripts Triggers Arabidopsis FLC
Chromatin Silencing
F. Liu et al.
A backward transcript of the FLOWERING
LOCUS C gene of Arabidopsis is involved in
regulation of the sense-strand transcription.

97 Reproducibility Distinguishes Conscious
from Nonconscious Neural Representations
A. Schurger et al.
Analysis of functional magnetic resonance
imaging data reveals that neural activation
patterns are more reproducible for seen
versus unseen objects.
>> Perspective p. 43
Controls Activation of Mammalian

A chromatin-modifying enzyme functions within the genome. E. D. Parvanov et al. 10.1126/science.1182363

Protein PRDM9 Is a Major Determinant of Meiotic Recombination Hotspots in Humans and Mice F. Baudat et al. 10.1126/science.1183439

Drive Against Hotspot Motifs in Primates Implicates the PRDM9 Gene in Meiotic Recombination S. Myers et al. 10.1126/science.1182363

Prdm9 Controls Activation of Mammalian Recombination Hotspots E. D. Parvanov et al. 10.1126/science.1182363

Variable abundances of meteorite isotopes may require correcting the lead-based age of the solar system by 5 million years. G. A. Brennecka et al. 10.1126/science.1180871

Darwinian Evolution of Prions in Cell Culture J. Li et al. 10.1126/science.1182363

When propagated in vitro, prion strains demonstrate adaptability and selection. G. A. Brennecka et al. 10.1126/science.1180871

Pulsar wind nebulae could account for some of the yet unidentified Galactic gamma-ray sources. 10.1126/science.1183444

Variable abundances of meteorite isotopes may require correcting the lead-based age of the solar system by 5 million years. G. A. Brennecka et al. 10.1126/science.1180871

When propagated in vitro, prion strains demonstrate adaptability and selection. G. A. Brennecka et al. 10.1126/science.1180871

Prion Strains in Mice and Their Transmission to Human Cells J. Li et al. 10.1126/science.1183439

Variable abundances of meteorite isotopes may require correcting the lead-based age of the solar system by 5 million years. G. A. Brennecka et al. 10.1126/science.1180871

When propagated in vitro, prion strains demonstrate adaptability and selection. G. A. Brennecka et al. 10.1126/science.1180871

Prion Strains in Mice and Their Transmission to Human Cells J. Li et al. 10.1126/science.1183439

Variable abundances of meteorite isotopes may require correcting the lead-based age of the solar system by 5 million years. G. A. Brennecka et al. 10.1126/science.1180871

Rapid sequencing of immune receptor loci can provide direct detection and tracking of immune diversity.

REPORT: Seasonal Influenza Vaccine Provides Priming for A/H1N1 Influenza Immunization G. Del Giudice et al. 10.1126/science.1183439

A vaccine currently used to protect against H1N1 is more effective when co-injected with an adjuvant and seasonal flu vaccine.
