Biosilence.

Open up to a more targeted approach to gene knockdown.
Biorevolution.
Welcome to RNAi technology that’s changing the face of science.

Our rich portfolio of RNAi technologies are designed to empower you to discover, explore and surpass your research needs. We are ready to revolutionize your biology. With core competencies spanning gene knockdown (siRNA, shRNA, esiRNA and miRNA), we offer unrivalled support and expertise – from discovery through validation and analysis. To accelerate your research, we offer a diversity of RNAi products, from screening to single target validation. MISSION® RNAi technologies are changing the face of science.

wherebiobegins.com/biosilencing
Visualization in all its forms has the power to illuminate and educate. It explains and makes clear all aspects of the world around us. It feeds insight and provokes curiosity.

The National Science Foundation (NSF) and the journal Science, published by the American Association for the Advancement of Science, invite you to participate in this year’s Challenge. The competition recognizes scientists, engineers, visualization specialists, and artists who produce innovative work in visual communication.

Winning entries will be published in Science and Science Online, and will be displayed on the NSF web site.

Award Categories

- Photographs/Pictures
- Illustrations/Drawings
- Informational Posters and Graphics
- Interactive Games
- Non-Interactive Media

Complete Entry Information:
Drop. Measure. Done.

NanoVue™ Plus: intelligent performance across all spectrophotometer applications

It’s all the convenience you want in a spectrophotometer, packaged in a portable, ergonomic device. NanoVue Plus features a new hydrophobic, gold-colored sample plate coating that delivers outstanding results for sub-microliter amounts of proteins and nucleic acids. It operates without a PC and does not require time-consuming third-party path length recalibration.

NanoVue Plus enables easy protocol selection using advanced software that includes intuitive drop-down lists for the full range of CyDye™ fluorescent dyes, as well as lists for common fluors. Results can be exported using a USB cable or Bluetooth™ connections for print via computer (PVC) or stored using the new SD card option. An integrated printer is also available.

• Swift, accurate analysis of 0.5 µl samples of nucleic acids and proteins
• Practical drop and measure mechanism
• Outstanding sample recovery
• Reliable and reproducible measurements
• Automatic self-calibration on start up
• Path length recalibration kit available as accessory

Experience the NanoVue Plus first hand.
Register for a trial at:
www.gelifesciences.com/tryNanoVuePlus
Enjoy first-time success

Gene expression and function analysis
sample and assay technologies by QIAGEN

Rely on QIAGEN’s manual and automated workflow solutions for:

- Sample collection and disruption, and RNA purification
- Real-time PCR and RT-PCR, and gene expression assays
- RNAi and gene silencing
- miRNA purification and assays
- Methylation analysis in epigenetics research
- Protein sample preparation and assays

Making improvements in life possible — www.qiagen.com
You’ve built your life around helping others.

It’s time someone returned the favor.

We’ll give you the guidance that can help bring your total financial picture into focus.

As someone who helps others for a living, your own financial well-being is often the last thing on your mind. That’s why Fidelity is here to help you develop a real, relevant plan for your investments. And we can do it on your terms.

How Fidelity can help you:

• A complimentary consultation to review both your personal and workplace investments

• Experience to help you build a comprehensive financial plan

• Guidance to help you with your needs, from charitable giving to estate planning

Schedule a complimentary one-on-one consultation with a Fidelity Representative today.

Reagents for Sample Preparation from New England Biolabs

Introducing NEBNext™, a series of highly pure reagents that facilitate sample preparation for downstream applications such as next generation sequencing and expression library construction. Available in sets, master mixes and modules, these robust reagents undergo stringent quality controls and functional validation, ensuring maximum yield, convenience and value.

Sequencing coverage map of the *E. coli* genome after using NEBNext™ DNA Sample Prep Reagent Set 1 for Sample Preparation

E. coli strain MG1655 gDNA was prepared with NEBNext DNA Sample Prep Reagent Set I and sequenced on an Illumina Genome Analyzer II.

For more information about NEBNext, including customized solutions, please contact NEBNext@neb.com.

Now available: NEBNext™ dsDNA Fragmentase™ an enzyme-based solution for the fragmentation of DNA
Call for Papers

Science Translational Medicine
Integrating Medicine and Science

Science Translational Medicine, from AAAS, the publisher of Science, focuses on the conversion of basic biomedical research into practical applications, thus bridging the research-to-application gap, linking basic scientists and researchers.

Submit your manuscripts for review in the following areas of translational medicine:

- Cardiovascular Disease
- Neuroscience/Neurology/Psychiatry
- Infectious Diseases
- Cancer
- Health Policy
- Bioengineering
- Chemical Genomics/Drug Discovery
- Applied Physical Sciences
- Drug Delivery
- Gene Therapy/Regenerative Medicine
- Cell Culture, Animal, and Human Studies
- Other Interdisciplinary Approaches to Medicine

Submit your research at www.submit2scitranslmed.org

Subscribing to Science Translational Medicine ensures that you and your lab have the latest translational medicine resources. For more information, visit ScienceTranslationalMedicine.org

For more information see ScienceTranslationalMedicine.org or contact scitranslmededitors@aaas.org
What is your taste?

BGI'S GENOMICS BAR

Would 128 Illumina HiSeq 2000 Sequencing Systems, 500 bioinformaticians and the use of cutting-edge software programs developed by BGI satisfy your taste?

One of the world's biggest genome centers is looking for collaborators!
It’s more than genetic analysis.
It’s the unstoppable drive to know more.
To find answers. To be the first.

The power of sequencing. The speed of arrays. Limitless applications harnessed with intensity and implemented with imagination.

The intangible force that fuels the dynamic Illumina Community.

That’s genetic energy™

www.illumina.com/geneticenergy
Finnzymes’ Direct PCR approach saves you time and cost by allowing amplification of DNA directly from the source material. No DNA purification is needed. Direct PCR is suitable for various kinds of sample materials such as plant and animal tissues, blood, and FFPE tissue samples.

Direct PCR is based on Finnzymes’ unique PCR enzymes, Phusion® High-Fidelity and Phire® Hot Start DNA Polymerases. These polymerases are exceptionally tolerant of many PCR inhibitors. To achieve the shortest possible protocols, combine the Direct PCR approach with Finnzymes’ Piko® Thermal Cyclers and UTW® reaction vessels.

NEW!

Optimized kits available:

- **Phire® Plant Direct PCR Kit**
  for plant material

- **Phire® Animal Tissue Direct PCR Kit**
  for various animal tissues

- **Phusion® Blood Direct PCR Kit**
  for blood

See the latest results, application notes and product updates at [www.finnzymes.com/directpcr](http://www.finnzymes.com/directpcr)
Congratulations to Dr. Richard Benton on winning the 2009 Eppendorf & Science Prize for his studies on odor detection in the fruit fly, *Drosophila*. His findings have revealed unexpected evolutionary parallels between insect chemosensation, immune recognition and synaptic transmission.

The annual international Eppendorf & Science Prize for Neurobiology honors young scientists for their outstanding contributions to neurobiology research based on methods of molecular and cell biology. The winner and finalists are selected by a committee of independent scientists, chaired by *Science’s* Senior Editor, Dr. Peter Stern.

To be eligible, you must be 35 years of age or younger. If you’re selected as this year’s winner, you will receive US$ 25,000, have your work published in the prestigious journal *Science* and be invited to visit Eppendorf in Hamburg, Germany.
CE.R.I.E.S. RESEARCH AWARD

The Epidermal and Sensory Research and Investigation Centre (Centre de Recherches et Investigations Épidermiques et Sensorielles) C.E.R.I.E.S. is the healthy skin research center of CHANEL, whose mission is to perform and encourage research of the physiology and biology of healthy skin. In addition to conducting its own independent research, the C.E.R.I.E.S. is funding an annual award.

The C.E.R.I.E.S. Research Award of 40,000 € is intended to honor a scientific researcher with a proven track record in fundamental or clinical research work, for a one year period, on the subject of:

PHYSIOLOGY OR BIOLOGY OF HEALTHY SKIN AND/OR ITS REACTIONS TO ENVIRONMENTAL FACTORS

The awardee will be selected by an international jury consisting of the members of the Scientific Advisory Board of the C.E.R.I.E.S.

Previous C.E.R.I.E.S. Research Award Winners:

2010 To be determined
2009 Sabine Werner, Ph.D., Zurich, Switzerland
2008 Paul A. Khavari, M.D., Ph.D., Stanford, USA
2007 Richard L. Gallo, M.D., Ph.D., San Diego, USA
2006 Irwin Mc Lean, Ph.D., DSc, FRSE, Dundee, Scotland, UK
2005 Masayuki Amagai, M.D, Ph.D, Tokyo, Japan
2004 Thomas Schwarz, M.D. Kiel, Germany
2003 Angela M. Christiano, Ph.D., New York, USA
2002 Dennis R. Roop, Ph.D., Houston, USA
2001 Fiona M. Watt, D. Phil., London, UK
2000 Michael Karin, Ph.D., San Diego, USA
1999 Jonathan Rees, M.D., Edinburgh, UK
1998 Jean Krutmann, M.D., Düsseldorf, Germany
1997 Jens-Michael Schröder, Ph.D., Kiel, Germany
1996 Akira Takashima, M.D., Ph.D., Texas, USA

Deadline for applications: June 4, 2010
Requests for application forms must be addressed to:
www.ceries.com
Science Signaling

Science Signaling, from the publisher of Science, AAAS, features top-notch, peer-reviewed, original research weekly. Submit your manuscripts in the following areas of cellular regulation:

- Biochemistry
- Bioinformatics
- Cell Biology
- Development
- Immunology
- Microbiology
- Molecular Biology
- Neuroscience
- Pharmacology
- Physiology and Medicine
- Systems Biology

Science Signaling is indexed in CrossRef and MEDLINE

Subscribing to Science Signaling ensures that you and your lab have the latest cell-signaling resources. For more information visit www.ScienceSignaling.org

Submit your research at: www.sciencesignaling.org/about/help/research.dtl
NEW PRODUCTS FOCUS: PCR/RT-PCR

TAQMAN PRI-miRNA ASSAYS

The TaqMan Pri-miRNA Assays are a set of real-time polymerase chain reaction (PCR) assays that enable researchers to measure the activity of specific microRNA (miRNA) genes by detecting and quantifying levels of expressed primary miRNA transcripts. Based on the latest Sanger miRBase content, this new line consists of more than 1,200 primary miRNA assays for human, mouse, and rat that have been designed using a stringent bioinformatic pipeline and the TaqMan Assay chemistry. Each assay delivers the specificity and sensitivity necessary to accurately measure primary miRNA transcript expression levels from a single genomic locus, without the requirement for a fully defined primary transcript sequence.

Applied Biosystems and Invitrogen
For info: 800-955-6288 | www.appliedbiosystems and www.invitrogen.com

QUANTITATIVE REAL-TIME ANALYSIS

The DyNAmo ColorFlash qPCR (quantitative polymerase chain reaction) Kits for fast, real-time analysis provide detection and quantification of DNA sequences from various sources. The kits are designed to ease qPCR setup and minimize errors by producing a simple way to track pipetting of reaction components. The two kits, DyNAmo ColorFlash SYBR Green qPCR Kit and DyNAmo ColorFlash Probe qPCR Kit, feature an innovative multicolor system. The Master Mix contains a blue dye, and a separate sample buffer contains a yellow dye. The qPCR reactions mix containing both components is green. With this patent-pending multicolor system, pipetting of both the master mix and the sample can be easily monitored, decreasing the risk of errors.

Finnzymes

MELTING ANALYSIS KITS

Epigenetics researchers can now detect changes in methylation status in real-time using high-resolution melting (HRM) analysis. The EpiTect HRM polymerase chain reaction (PCR) kit provides a master mix format for the detection of changes in the CpG (C-phosphate-G) methylation status of bisulfite-converted DNA. The kit is designed to run on all real-time PCR cyclers, including the Rotor-Gene Q, which provides a highly specific melting curve. HRM technology enables a rapid characterization of DNA samples based on their melting behavior following PCR amplification, and is suitable for screening large numbers of samples and for detecting changes in the methylation degree of specific DNA regions.

Qiagen
For info: 240-686-7660 | www.qiagen.com/epigenetics

RT-PCR KITS

The Quantifast Multiplex RT-PCR and Rotor-Gene Multiplex RT-PCR kits are new reverse transcription–polymerase chain reaction (RT-PCR) tools. The Quantifast kits perform fast real-time RT-PCR without requiring optimization on both standard and fast real-time cyclers for one-step applications. The Rotor-Gene Kit allows detection of up to four targets per tube and includes optimized protocols for precise results on the Rotor-Gene Q real-time cycler.

Qiagen
For info: 800-362-7737 | www.qiagen.com

ADJUSTABLE SPACING PIPETTOR

The six-channel Voyager electronic pipettor features a mechanism that alters tip spacing at the press of a button. The Voyager incorporates a small motor that moves the center-to-center tip spacing quickly and smoothly at any point in the protocol, and requires only one hand to operate. Users can preset up to three distinct tip spacings in a way that accommodates most labware vessels. The spacing can be adjusted from 9.0 mm to 19.5 mm. Two models are available, in volume ranges of 10–300 µl and 50–1,250 µl. Both models work with 24-well plates, 48-well plates, and many other formats.

SAMPLE QUANTIFICATION SYSTEM

SlingShot is a DNA quantification system that allows researchers to sequence their libraries of rare samples and lower costs, improve data quality, and speed the time to results in DNA sequencing. It also allows the sequencing of rare samples. It can improve the productivity of next generation sequencing tools from Roche, Illumina, and Applied Biosystems by exploiting the unique microfluidic properties of integrated fluidic circuits (IFCs) to detect only amplifiable molecules within the sample mixture. IFCs use extremely small amounts of sample, so this technology opens up the ability to sequence rare libraries where suboptimal amounts of the tissue are available. The ability of IFCs to count individual molecules—using digital polymerase chain reaction—also eliminates the need for costly library titration to ready samples for sequencing.

SCIENCE VOL 327 12 MARCH 2010

1395
Use of RetroNectin®-based gene transduction protocols dramatically enhances the efficiency of retrovirus or lentivirus-mediated gene transfer into mammalian cells. RetroNectin® is a recombinant polypeptide consisting of three functional domains derived from the human fibronectin. RetroNectin®'s enhancement of gene transduction efficiency is hypothetically due to co-localization of retroviral particles and target cells on the RetroNectin® molecule. Recent experiments demonstrate RetroNectin®'s efficacy on stem cells.

- **Highly Efficient Retroviral or Lentiviral Gene Transfer into Stem Cells**
- **No Polybrene Required** for Transduction
- **Facilitates development of innovative protocols** for proliferation of cells carrying a transferred gene, maintaining the function of the cells, and increasing transplant efficiency

* carrying VLA-4 and/or VLA-5 cell surface receptors

RetroNectin® IS INTENDED FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES. For clinical grade CH-296, please contact TaKaRa Bio Inc.

All trademarks are the property of their respective owners. A method to increase the efficiency of retrovirus mediated gene transfer (covered by the claims of U.S. Patent No. 5,686,278, 6,033,907, 7,083,979, and 6,670,177 and their foreign counterpart patent claims ) is licensed to TAKARA BIO INC. exclusively and worldwide.
“The fastest separations and the gold standard method.
That’s electroforward thinking.”

Next-generation precast gels.
No special buffers required.

Introducing long shelf life Mini-PROTEAN™ TGX (Tris-Glycine eXtended) Gels from Bio-Rad.
The innovative TGX formulation delivers consistent, linear separation without the need for expensive, specialized buffers.

Get results faster with:
- Run times as short as 15 minutes
- Transfer in as little as 15 minutes
- New bottom-opening cassette design for faster setup and less handling for downstream applications

Gel with us at www.miniprotean.com.

Research. Together.
