COVER
Cranium of Australopithecus sediba (specimen UW88-50), a new species of australopith found at the Malapa site in South Africa. Two partial skeletons, dated to about 1.9 million years ago, share many derived features with Homo and may thus shed light on the evolution of that genus. See the related Research Articles on pages 195 and 205 and the related News story on page 154.

RESEARCH ARTICLES

195 Australopithecus sediba: A New Species of Homo-Like Australopith from South Africa
L. R. Berger et al.

205 Geological Setting and Age of Australopithecus sediba from Southern Africa
P. H. G. M. Dirks et al.
A new species of Australopithecus, about 1.9 million years old, shows many derived features with Homo, helping to reveal its evolution.

208 Why Copy Others? Insights from the Social Learning Strategies Tournament
L. Rendell et al.
Learning from what others do is more efficient than learning all on one’s own.

REPORTS

213 Two-Dimensional Phonon Transport in Supported Graphene
J. H. Seol et al.
The thermal conductivity of graphene supported on silicon dioxide remains high, despite phonon scattering by the substrate.

216 Iron-Clad Fibers: A Metal-Based Biological Strategy for Hard Flexible Coatings
M. J. Harrington et al.
Marine mussel byssal threads have an outer coating in which proteins are linked to metal ions.

220 Solvent-Mediated Electron Hopping: Long-Range Charge Transfer in IBr-(CO2) Photodissociation
L. Sheps et al.
The presence of an intervening carbon dioxide molecule dramatically changes the electron transfer probability between two halogen atoms.

224 Increased Silver Activity for Direct Propylene Epoxidation via Subnanometer Size Effects
Y. Lei et al.
Clusters of three silver atoms deposited on alumina are active for the low-temperature direct formation of propylene oxide.

228 Metabolic Syndrome and Altered Gut Microbiota in Mice Lacking Toll-Like Receptor 5
M. Vijay-Kumar et al.
The innate immune system may promote metabolic health through effects on gut microbes.

232 Variation in Transcription Factor Binding Among Humans
M. Kasowski et al.
Transcription factor binding sites vary among individuals and are correlated with differences in expression.

235 Heritable Individual-Specific and Allele-Specific Chromatin Signatures in Humans
R. McDaniel et al.
An appreciable amount of variation in chromatin status and transcription factor binding has a genetic basis.

240 Arsenic Trioxide Controls the Fate of the PML-RARα Oncoprotein by Directly Binding PML
X.-W. Zhang et al.
Arsenic, a drug used clinically for leukemia, binds directly to an oncogenic protein, thereby promoting its degradation.

243 Transnuclear Mice with Predefined T Cell Receptor Specificities Against Toxoplasma gondii Obtained via SCNT
O. Kirak et al.
Researchers describe a method to obtain transgenic mice for the study of T cell responses to infectious disease.
