COVER
Cranium of Australopithecus sediba (specimen UW88-50), a new species of australopithecus found at the Malapa site in South Africa. Two partial skeletons, dated to about 1.9 million years ago, share many derived features with Homo and may thus shed light on the evolution of that genus. See the related Research Articles on pages 195 and 205 and the related News story on page 154.

220 Solvent-Mediated Electron Hopping: Long-Range Charge Transfer in IBr−(CO2) Photodissociation
L. Sheps et al.
The presence of an intervening carbon dioxide molecule dramatically changes the electron transfer probability between two halogen atoms.

224 Increased Silver Activity for Direct Propylene Epoxidation via Subnanometer Size Effects
Y. Lei et al.
Clusters of three silver atoms deposited on alumina are active for the low-temperature direct formation of propylene oxide.

228 Metabolic Syndrome and Altered Gut Microbiota in Mice Lacking Toll-Like Receptor 5
M. Vijay-Kumar et al.
The innate immune system may promote metabolic health through effects on gut microbes.
>> Perspective p. 179

232 Variation in Transcription Factor Binding Among Humans
M. Kasowski et al.
Transcription factor binding sites vary among individuals and are correlated with differences in expression.

235 Heritable Individual-Specific and Allele-Specific Chromatin Signatures in Humans
R. McDaniell et al.
An appreciable amount of variation in chromatin status and transcription factor binding has a genetic basis.

240 Arsenic Tetroxide Controls the Fate of the PML-RARα Oncoprotein by Directly Binding PML
X.-W. Zhang et al.
Arsenic, a drug used clinically for leukemia, binds directly to an oncogenic protein, thereby promoting its degradation.
>> Perspective p. 184

243 Transnuclear Mice with Predefined T Cell Receptor Specificities Against Toxoplasma gondii Obtained via SCNT
O. Kirak et al.
Researchers describe a method to obtain transgenic mice for the study of T cell responses to infectious disease.
