An aggressive storm that battered the coastal town of Blackpool, United Kingdom, in January 2007. Among other important changes now occurring in the marine environment, rising sea levels will create the need for increased protection from such severe storms. See the special section on our changing oceans beginning on page 1497.

RESEARCH ARTICLES

Tropical Ocean Temperatures Over the Past 3.5 Million Years
T. D. Herbert et al.
Tropical sea surface temperatures were controlled more by atmospheric connections to glaciation cycles than by ocean circulation.
>> Perspective p. 1488; Report p. 1550

Target RNA–Directed Trimming and Tailing of Small Silencing RNAs
S. L. Ameres et al.
Animal microRNAs have reduced complementarity to their targets to avoid their own degradation.
>> Perspective p. 1494; Report p. 1563

REPORTS

Bose-Einstein Condensation in Microgravity
T. van Zoest et al.
Studies of atomic quantum states in free-fall conditions may provide ways to test predictions of general relativity.
>> Perspective p. 1491

Hot-Electron Transfer from Semiconductor Nanocrystals
W. A. Tisdale et al.
Extraction of highly excited electrons formed in a light-absorbing material may make solar cells more efficient.

Crossover from Single-Step Tunneling to Multistep Hopping for Molecular Triplet Energy Transfer
J. Vüro-Weißen et al.
Ultrafast absorption spectroscopy reveals a change in mechanism when sites for electron transfer become more distant.

Subpolar Link to the Emergence of the Modern Equatorial Pacific Cold Tongue
A. Martínez-García et al.
The eastern Pacific Ocean cold tongue appeared as Earth’s climate cooled and subpolar waters expanded in the Pleistocene.
>> Perspective p. 1488; Research Article p. 1530

Radiocarbon-Based Chronology for Dynastic Egypt
C. Bronk Ramsey et al.
Many radiocarbon dates from short-lived plant remains provide a long and accurate chronology for ancient Egypt.
>> Perspective p. 1489

Evolutionary Novelty Is Concentrated at the Edge of Coral Species Distributions
A. F. Budd and J. M. Pandolfi
Caribbean coral morphology documents that most coral evolution did not occur at the center of diversity of a species’ range.

Identification of Germline Stem Cells in the Ovary of the Teleost Medaka
S. Nakamura et al.
Ongoing follicle production is maintained by stem cells in an adult fish ovary.

MicroRNA-33 and the SREBP Host Genes Cooperate to Control Cholesterol Homeostasis
S. H. Najafi-Shoushtari et al.

MiR-33 Contributes to the Regulation of Cholesterol Homeostasis
K. J. Rayner et al.
A small noncoding RNA helps regulate cholesterol levels in mice.
>> Perspective p. 1495

Development of the Hippocampal Cognitive Map in Preweanling Rats
T. J. Wills et al.
Some aspects of spatial cognition develop very early and may be determined innately.

Development of the Spatial Representation System in the Rat
R. F. Langston et al.
Space and direction are already represented in specific neurons when rat pups navigate a location for the first time.
