Next-gen GWAS. NOW.

It’s a content revolution.

Up to 50% more coverage of common and rare variants than all other arrays. Maximum power for any population.

The Omni family of microarrays can propel your studies into true next-gen GWAS. With a clearly defined product path to the future. Immediate utility. Future flexibility.

Get on the path to next-gen GWAS.

Now is the time. Get started at www.illumina.com/GWAS
ARE YOU ON TRACK?

Investment guidance for higher education professionals

Unsure of how to get and keep your retirement on track? We’re ready to help. Together, we can:

- **Analyze your portfolio.** We’ll help you bring your total financial picture—both workplace and personal savings—into focus.

- **Review your plan.** We can help you prepare for up and down markets.

- **Choose investments.** We’ll help you choose low-cost investments, from bonds and annuities to no-load mutual funds.

**SET UP YOUR COMPLIMENTARY ONE-ON-ONE CONSULTATION TODAY.**

Professor Tanke, why is curiosity a building block of life?

Hans Tanke, a researcher and pioneer of digital fluorescence microscopy, is driven by passionate curiosity. He is Head of the Department of Molecular Cell Biology at Leiden University Medical Center, Netherlands, where he gives young scientists creative freedom: this enables them to develop the ethically responsible dedication with which he himself keeps tracking down the building blocks of life.

Living up to Life
Free up your time

Automated sample and assay technologies by QIAGEN

Automated solutions from sample to result:

- The widest choice of sample processing protocols
- Low-, medium-, and high-throughput automation
- Leading solutions for molecular diagnostics
- Plug-and-play automated sample preparation
- Quantitative, real-time PCR detection
- Automated analysis of DNA fragments and RNA
- High-resolution sequence-based DNA detection and quantification
- HPV testing

Making improvements in life possible — www.qiagen.com
New PathScan® RTK Signaling Antibody Array Kits are slide-based antibody arrays founded on the sandwich immunoassay principle.

- Arrays are produced and optimized in-house, incorporating the highest quality antibodies and ensuring results you can trust.
- Arrays allow the analysis of phosphorylation levels of 39 proteins per assay, saving valuable time and reagents.
- Arrays are designed to detect receptor tyrosine kinases (RTKs) and key downstream signaling molecules, allowing the most comprehensive readout of signaling events.
- Technical support is provided by the same scientists who developed and produce the product, which translates into a thorough, fast and accurate response.
- Chemiluminescent detection kit offers convenient and easy detection without specialized instrumentation.
- Fluorescent detection kit offers a broad linear range for the most accurate quantification.

Unparalleled product quality, validation and technical support.

Bring the power of 454 pyrosequencing to your amplicon projects. Now available, the new small-footprint **GS Junior System** generates 70,000 reads per run, and delivers the performance and long reads (up to 500 base pairs) of the GS FLX Titanium chemistry to your benchtop.

- **Detect SNPs, insertions, and deletions.**
- **Discover rare somatic mutations in complex samples based on ultra-deep sequencing of amplicons.**
- **Sequence and analyze collections of human exons for identifications of rare alleles.**
- **Find viral quasispecies present within infected populations.**
- **Identify rare alleles associated with diseases.**

For complete information on the GS Junior System and all of the Roche sequencing solutions, visit [www.454.com](http://www.454.com) or contact your local Roche representative today.
Bioperspective.

Exposing new perspectives on the role of epigenetics in biology.

With more than 15,000 epigenetic target-specific products, including antibodies, shRNA, siRNA and small molecules, Sigma® Life Science is committed to providing you with one of the most comprehensive suites of products and innovative technologies on the market for the study of DNA methylation, chromatin modification and RNA regulation.

wherebiobegins.com/bioregulation
Premier Scientific Partner

BGI (previously known as Beijing Genomics Institute) was founded in Beijing in 1999 for the Human Genome Project. Our headquarters was relocated to Shenzhen, China in 2007. BGI has become the largest genomic organization in the world with a focus in research and application in personalized healthcare, agriculture, conservation and bio-energy fields. We ascribe to the highest standards in genomics solutions for sample preparation, sequencing experimental design and customized bioinformatics analysis for our research collaborators and project partners.

Scientific Milestones (2001 to Jun 2010)

- **167** Scientific publications
- **29** *Science & Nature* publication groups

Genomics Solutions

1. **de novo**
   - Human
   - Plant & Animal
   - Resequecing

2. RNA Sequencing
   - Transcriptome
   - RNA-Seq
   - small RNA

3. Disease studies
   (Monogenic & Complex)
   - Exome
   - Target region
   - Metagenomics
   - Whole genome

4. Others
   - Microbes
   - Plasmids
   - Epigenomics

Bioinformatics Centre

- Data analysis methods and computational tools development in a wide range of applications including *de novo* sequencing; RNA sequencing; exome sequencing; individual/large-scale re-sequencing; epigenomics; and metagenomics
- Eliminates data analysis bottlenecks and quickly translates sequencing data into powerful scientific discoveries
- **9** Publications on Bioinformatics tools: Short Oligonucleotide Alignment Program (SOAP, SOAP2, SOAPsnp, SOAPdenovo)
  >10,000 users

Sequencing & Computing Platforms

- The largest sequencing capacity in the world by 137 Illumina HiSeq 2000 and 27 Applied Biosystems SOLID 4 System
- Reliable, high quality sequencing results with the industry-leading turnaround time
- High-performance supercomputing centers with a total peak performance up to 102 T flops, 20 TB memory and 10 PB storage

How do we know this lead molecule is novel?

Need to assess the novelty of substances? SciFinder is the answer.

It includes CAS REGISTRY® the most comprehensive substance information available, integrated with relevant journal articles and patents.

Give your research team the highest quality and most timely scientific information resource.

Make SciFinder an essential part of your research process.

For more information about SciFinder, visit www.cas.org or e-mail help@cas.org.

SciFinder®—Part of the process.™

www.cas.org

CAS is a division of the American Chemical Society
Since 1848, AAAS has served as a prominent voice to advance science and as a valuable resource for scientists, educators, and policy makers. For the past 100 years, part of this mission has included publishing the journal Science, one of the world’s premier peer-reviewed research journals. Working together to disseminate the most compelling discoveries across all scientific disciplines, AAAS and Science continue to fulfill their mission of advancing science for the benefit of all.

In addition to supporting Science, individual memberships are a driving force behind critical AAAS programs and activities designed to strengthen the global scientific enterprise. By becoming a AAAS member, you not only make a significant impact by allowing AAAS to continue its mission of advancing science and serving society, but you also gain powerful resources to develop your own career.

As a member, you'll receive 51 issues of the journal Science delivered weekly as well as online access to: groundbreaking research before it's published; the Science online archives dating back to 1880; and the current table of contents. In addition to all the benefits provided by the journal Science, AAAS has partnered on behalf of its members to provide substantial discounts with numerous organizations, including: Apple, VISA, GEICO, Barnes & Noble, and more.

If you're interested in becoming a AAAS member and changing the face of science, please visit aaas.org. Join us. Together we can make a difference.
AAAS is here – bringing scientific expertise to policy making.

Good science policy is the result of politicians understanding science and scientists understanding policy. Toward this end, AAAS manages the Science & Technology Policy Fellowships program, which embeds scientists and engineers in the federal government for up to two years. From Congress to the State Department, each class of Fellows contributes to the policy-making process while getting hands-on experience at the intersection of science and policy. As a AAAS member your dues support these efforts. If you’re not yet a AAAS member, join us. Together we can make a difference.

To learn more, visit aaas.org/plusyou/fellows
AAAS is here – helping scientists achieve career success.

Every month, over 400,000 students and scientists visit ScienceCareers.org in search of the information, advice, and opportunities they need to take the next step in their careers.

A complete career resource, free to the public, Science Careers offers a suite of tools and services developed specifically for scientists. With hundreds of career development articles, a grants and scholarships database, webinars and downloadable booklets filled with practical advice, a community forum providing real-time answers to career questions, and thousands of job listings in academia, government, and industry, Science Careers has helped countless individuals prepare themselves for successful careers.

As a AAAS member, your dues help AAAS make this service freely available to the scientific community. If you’re not a member, join us. Together we can make a difference.

To learn more, visit aaas.org/plusyou/sciencecareers
AAAS is here – promoting universal science literacy.

In 1985, AAAS founded Project 2061 with the goal of helping all Americans become literate in science, mathematics, and technology. With its landmark publications Science for All Americans and Benchmarks for Science Literacy, Project 2061 set out recommendations for what all students should know and be able to do in science, mathematics, and technology by the time they graduate from high school. Today, many of the state standards in the United States have drawn their content from Project 2061.

Every day Project 2061 staff use their expertise as teachers, researchers, and scientists to evaluate textbooks and assessments, create conceptual strand maps for educators, produce groundbreaking research and innovative books, CD-ROMs, and professional development workshops for educators, all in the service of achieving our goal of universal science literacy.

As a AAAS member, your dues help support Project 2061 as it works to improve science education. If you are not yet a AAAS member, join us. Together we can make a difference.

To learn more, visit aaas.org/plusyou/project2061
AAAS is here – bringing educational infrastructure to the developing world.

AAAS is helping the Rwandan government rebuild its educational infrastructure as a way to help drive economic growth and development. By providing materials such as the Project 2061 *Atlas of Science Literacy*, lesson plans from Science NetLinks, and access to *Science* digital libraries, AAAS is helping the people of Rwanda work toward a future built around science and technology. As a AAAS member your dues support these efforts. If you’re not yet a AAAS member, join us. Together we can make a difference.

To learn more, visit [aaas.org/plusyou/rwanda](http://aaas.org/plusyou/rwanda)
AAAS is here – preparing minority students for careers in science.

Part of AAAS’s mission is to strengthen and diversify the scientific work force. To help achieve this goal AAAS partners with NSF to present the Historically Black Colleges and Universities Undergraduate Program, a conference where students from HBCUs get experience presenting their research, networking with peers, meeting with representatives from graduate schools, and learning about career opportunities. As a AAAS member your dues support these efforts. If you’re not yet a AAAS member, join us. Together we can make a difference.

To learn more, visit aaas.org/plusyou/hbcuup
AAAS is here – connecting government to the scientific community.

As a part of its efforts to introduce fully open government, the White House is reaching out to the scientific community for a conversation around America's national scientific and technological priorities.

To enable the White House's dialogue with scientists, AAAS launched Expert Labs, under the direction of blogger and tech guru Anil Dash. Expert Labs is building online tools that allow government agencies to ask questions of the scientific community and then sort and rank the answers they receive.

On April 12, 2010, AAAS asked scientists everywhere to submit their ideas to the Obama administration and at the same time launched the first of Expert Labs tools, Think Tank, to help policy makers collect the subsequent responses. The result was thousands of responses to the White House's request, many of which are already under consideration by the Office of Science and Technology Policy.

As a AAAS member, your dues support our efforts to help government base policy on direct feedback from the scientific community. If you are not already a member, join us. Together we can make a difference.

EXPLORING GENETIC DIVERSITY
Mapping the Genetic Landscape Through Next Generation Sequencing

Characterizing the genetic diversity in a population comes with many challenges, one of which is the sheer number of samples needed for analysis in order to provide a clear reading of underlying genetic variation. An effective way to solve this problem is through the use of multiplex polymerase chain reaction (PCR) run with barcoding, which offers the possibility of sequencing hundreds of unique samples per run using next generation sequencing technology. This process, known as amplicon resequencing, allows for each PCR amplicon to be sequenced individually, enabling both the identification of rare variants and the assignment of haplotypes.

This webinar will provide an overview of amplicon resequencing–based approaches, from the point of view of investigating the complexity and diversity seen in immune system genes. Experts will discuss topics such as site-specific recombination reactions and cellular dysfunction, as well as how to utilize cutting-edge technology to discover pathways and specific patterns which impact such factors as the inability of the body to mount an immune response and somatic recombination in antibody production.

PARTICIPATING EXPERTS

Michael W. Smith, Ph.D.
SAIC-Frederick
Frederick, MD

Francois Vigneault, Ph.D.
Harvard Medical School
Boston, MA

Henry A. Erlich, Ph.D.
Children’s Hospital Oakland Research Institute
Oakland, CA

REGISTER NOW!
Sign Up At:
www.sciencemag.org/webinar

DURING THIS WEBINAR, PANELISTS WILL:
- talk about best practices for setting up amplicon resequencing projects
- discuss the application of resequencing technologies to study immunologic and other forms of genetic diversity
- share their recent data and expert advice
- answer questions from the live, online audience in the field
Why Does Academia Prefer Octet For Label-Free Protein Characterization?

“With the affordable, easy-to-use Octet System, protein-protein interactions can be measured right on the benchtop in my own lab at anytime, obviating the need for a large instrumentation grant and core lab, or arranging and scheduling access.”

Dr. Jay Groppe, Assoc. Professor
Department of Biomedical Sciences
Texas A&M Health Science Center

Out of the core lab, onto your benchtop
Measure concentration, kinetic and affinity constants and generate SPR-quality data right on your benchtop

Label-free kinetic characterization in a few minutes!
Get experiments completed in minutes rather than days using a Dip and Read™ assay—setup requires only pipeting reagents into a 96- or 384-well microplate

Direct quantitation assays for antibodies and other proteins
Replace HPLC and ELISA with Octet to measure antibody and other protein concentrations in crude samples accurately without secondary reagents

Visit www.fortebio.com or call 888.OCTET-QK today to learn more about the Octet platform.

“Fast. Accurate. EASY.”
**Big Gains for Journal of Physical Chemistry C**

The Journal of Physical Chemistry C saw an impressive 140% increase in its 2009 citations and a 24% increase in its 2009 Impact Factor compared to the previous year.

**NEW PRODUCTS FOCUS: SEQUENCING TECHNOLOGIES**

**BENCHTOP DNA SEQUENCER**

GS Junior Benchtop System provides an integrated sequencing and bioinformatics solution, all in a size that is no bigger than a typical desktop laser printer. This system sequences over 35 million bases of DNA in a single 10-hour instrument run, with average read lengths in the range of 400 base pairs. With the ability to deep sequence gene loci and the sensitivity to identify rare drug-resistant viral variants down to one percent frequency, the technology offers significant advantages over current standards in many areas of medical research. A suite of high-performance data analysis software is included with the system that provides tools for de novo genome and transcriptome assembly and mapping, as well as amplicon variant analysis for the identification of rare variants in targeted sequencing studies.

454 Life Sciences/Roche  
For info: 800-262-4911 | www.gsjunior.com

**DNA EXTRACTION**

The GET AGAROSE DNA kit supplies a method for fast and efficient isolation of DNA fragments from agarose gels. The kit is based on G-Biosciences’ GET Spin Columns which have a high binding affinity for DNA. The isolation step involves the release of nucleic acid fragments from gel pieces followed by the capture of the fragments on GET Spin Columns. Washing and elution of the clean nucleic acid fragments can then be performed with a suitable buffer. Features of the kit include rapid isolation of DNA that is ready for downstream applications, including ligation. The kit is suitable for 100 bp to 20,000 bp sized fragments and is compatible with TAE and TBE buffer gels. GET AGAROSE DNA kits are supplied in 50 or 100 prep packages.

G-Biosciences/Genotech  
For info: 800-628-7730 | www.GBiosciences.com

**DNA ISOLATION AND PURIFICATION**

DNAAdvance SP is an extraction kit for the isolation and purification of DNA from saliva samples collected with DNA Genotek’s Oragene•DNA Self Collection Kits. The high throughput genomic DNA isolation reagent system enables the purification of high-quality DNA from saliva samples, making it ideal for genotyping applications (SNP, fragment analysis), sequencing, and quantitative polymerase chain reaction. Oragene•DNA is an all-in-one system for the collection, stabilization, transportation, and purification of DNA from saliva that enables easy, reliable, and cost-effective collection of samples from large numbers of individuals while providing high-quality DNA.

DNA Genotek/Beckman Coulter Genomics  
For info: 866-813-6354 | www.dnagenotek.com

**BIOFILM DNA/RNA ISOLATION**

PowerBiofilm DNA Isolation Kit and PowerBiofilm RNA Isolation Kit are designed to isolate high-quality DNA or RNA from virtually any type of biofilm sample, from dental plaque to microbial mats. Biofilms are a ubiquitous form of microbial life in natural, industrial, and hospital settings with far-reaching impacts from infectious disease to bioremediation. These are the first commercial kits designed to isolate nucleic acids from the wide range of biofilm samples. Each kit includes a brand new bead tube mix which combines both mechanical and chemical cell lysis for optimal penetration of polymeric substances commonly found in biofilms. The kits also contain the patented Inhibitor Removal Technology (IRT) for better sensitivity in polymerase chain reaction (PCR), RT-PCR, or sequencing, and it yields nucleic acids of high quality and purity. With IRT, even biofilms containing heavy amounts of contaminants can be processed to provide inhibitor-free DNA and RNA.

MO BIO Laboratories, Inc.  
For info: 800-606-6246 | www.mobio.com

**AMPLICON TAGGING**

A new protocol for the Access Array System enables sequencing of amplicon libraries using GS FLX Titanium Series reagents on the 454 GS FLX sequencing system. The Access Array integrated fluidic circuit (IFC) automatically generates emulsion polymerase chain reaction (emPCR)-ready libraries by simultaneously combining 48 samples and 48 primer sets to produce 48 uniquely barcoded samples per chip. Fluidigm’s Access Array IFC, when used with a 454 Titanium sequencer, can capture up to 24 kb of sequence data per sample, or 1.15 MB per IFC. The addition of the GS FLX Titanium Series reagents with longer reads expands the amount of sequence that can be captured using the Access Array System. By incorporating adaptor sequences into the primer design, the final PCR product is ready for emPCR as it already contains the necessary capture sequences. The 48.48 Access Array IFC is the first chip that features the ability to recover reaction products automatically.

Fluidigm   
For info: 866-358-4354 | www.fluidigm.com

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information. Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by Science or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.
Visualization in all its forms has the power to illuminate and educate. It explains and makes clear all aspects of the world around us. It feeds insight and provokes curiosity.

The National Science Foundation (NSF) and the journal Science, published by the American Association for the Advancement of Science, invite you to participate in this year’s Challenge. The competition recognizes scientists, engineers, visualization specialists, and artists who produce innovative work in visual communication.

Winning entries will be published in Science and Science Online, and will be displayed on the NSF website.

Complete Entry Information:
The biggest advance in qPCR since the q.

The new Viia™ 7 Real-Time PCR System puts high-productivity qPCR at your fingertips.

With a streamlined workflow, one-button protocol feature, and intuitive software, the new Viia™ 7 Real-Time PCR System is faster to set up, easier to run, and more convenient to automate than any other qPCR platform. And with the new OptiFlex™ optical system, you’ll have greater dye flexibility for multiplexing than ever before. The end result is high-accuracy data with minimal distraction, which means you can stay focused on what matters most—your research.

For more information, visit www.appliedbiosystems.com/viia7
