BREVIA
916 Land-Level Changes Produced by the Mw 8.8 2010 Chilean Earthquake
M. Farias et al.
The 2010 Mw 8.8 Chilean earthquake ruptured ~500 kilometers and vertically displaced over 3 meters.

CONTENTS continued >>

COVER
Immuno-electron micrograph of a plastid-dividing ring (diameter ~500 nm), a structure required for chloroplast division, isolated from the unicellular alga Cyanidioschyzon merolae. Immunogold particles (black dots) indicate localization of the glycosyltransferase protein PDR1 (protein dividing ring 1), which forms a ring with carbohydrates that constricts to physically divide the chloroplast. See page 949.

RESEARCH ARTICLE
917 PTIP Promotes Chromatin Changes Critical for Immunoglobulin Class Switch Recombination
J. A. Daniel et al.
A factor that regulates chromatin accessibility and recombination during immunoglobulin rearrangements is identified.
>> Perspective p. 914

REPORTS
924 Cosmological Constraints from Strong Gravitational Lensing in Clusters of Galaxies
E. Jullo et al.
Light from distant sources bends around massive intervening objects and helps to reveal the properties of dark energy.

927 Dual Jets from Binary Black Holes
C. Palenzuela et al.
Simulations show that merging black holes may produce a detectable electromagnetic signature.
>> Perspective p. 908

930 Unidirectional Emission of a Quantum Dot Coupled to a Nanoantenna
A. G. Curto et al.
An antenna designed for optical wavelengths is used to control the direction of the light emitted from a quantum dot.
>> Perspective p. 910

933 Ceria Maintains Smaller Metal Catalyst Particles by Strong Metal-Support Bonding
J. A. Farmer and C. T. Campbell
The stability of cerium oxide surfaces allows deposited silver nanoparticles to maintain a small size distribution.

936 Evidence of Recent Thrust Faulting on the Moon Revealed by the Lunar Reconnaissance Orbiter Camera
T. R. Watters et al.
The relatively young age of the faults and their distribution suggest global, late-stage contraction of the Moon.

940 Drought-Induced Reduction in Global Terrestrial Net Primary Production from 2000 Through 2009
M. Zhao and S. W. Running
Terrestrial biomass declined during the hot past decade, reversing the trend of the previous 20 years.

943 Loss of DNA Replication Control Is a Potent Inducer of Gene Amplification
B. M. Green et al.
Re-replication of DNA and homologous recombination between repetitive elements can cause genome instability.
>> Perspective p. 911

946 The Legionella Effector Protein DrrA AMPylates the Membrane Traffic Regulator Rab1b
M. P. Müller et al.
An intracellular bacterial pathogen interferes with host cell membrane trafficking.

949 Chloroplasts Divide by Contraction of a Bundle of Nanofilaments Consisting of Polyglucan
Y. Yoshida et al.
Enzymatic transfer of simple sugars is essential for the formation of the chloroplast-division machinery.

953 Conserved Fungal LysM Effector Ecp6 Prevents Chitin-Triggered Immunity in Plants
R. de Jonge et al.
A fungal protein binds to a host cell wall component to allow the fungus to escape immune responses.

956 Linear Arrays of Nuclear Envelope Proteins Harness Retrograde Actin Flow for Nuclear Movement
G. W. G. Luxton et al.
An actin-dependent mechanism is involved in moving nuclei so that they are properly positioned for cell migration.
>> Perspective p. 909

959 mTOR-Dependent Synapse Formation Underlies the Rapid Antidepressant Effects of NMDSAntagonists
N. Li et al.
Ketamine, an anaesthetic and recreational drug, rapidly increases synaptic signaling and antidepressant behavioral responses.
>> Perspective p. 913; Science Podcast

964 Females Use Multiple Mating and Genetically Loaded Sperm Competition to Target Compatible Genes
S. R. Pryke et al.
Female birds that have multiple mates favor fertilization by the most genetically compatible father.

967 Cell Lineage Reconstruction of Early Zebrafish Embryos Using Label-Free Nonlinear Microscopy
N. Olivier et al.
Time-lapse recording characterizes the rhythm and cleavage pattern of the embryo during early stages of development.
New research questions the link between ‘Killer’ Volcanoes Not Guilty

Pulses of light allow researchers to change what happens when a stone skips across the water.

Researchers develop a model that reveals what could improve aircraft safety.
