Topographic map of the Moon based on measurements from the Lunar Orbiter Laser Altimeter, showing the boundary between Oceanus Procellarum, a smooth, relatively young mare region on the western nearside (upper right), and the older, more heavily cratered highlands (center and lower left). Colors indicate increasing elevation from blue to red. The crescent-shaped Lorentz crater (center) is ~312 kilometers in diameter. See the Reports on pages 1504, 1507, and 1510.

1487 Island Biogeography Reveals the Deep History of SIV
M. Worobey et al.
Separation of the island of Bioko from West Africa about 10,000 years ago dates the origins of simian immunodeficiency virus.

RESEARCH ARTICLES
1488 Hemispheric Aerosol Vertical Profiles: Anthropogenic Impacts on Optical Depth and Cloud Nuclei
A. Clarke and V. Kapustin
Vertical profiles of atmospheric aerosols from throughout the Pacific region show the influence of anthropogenic combustion.
>> Perspective p. 1474; Report p. 1513

1492 Evidence for an Alternative Glycolytic Pathway in Rapidly Proliferating Cells
M. G. Vander Heiden et al.
Characterization of cancer cell metabolism provides evidence for a previously uncharacterized metabolic pathway.

REPORTS
1500 Quantum Walks of Correlated Photons
A. Peruzzo et al.
Pairs of correlated photons retain their quantum-mechanical correlations as they propagate through a waveguide maze.
>> Perspective p. 1477

1504 Global Distribution of Large Lunar Craters: Implications for Resurfacing and Impactor Populations
J. W. Head III et al.
An analysis of high-resolution global topography data advances our understanding of the impact history of the Moon.

1507 Global Silicate Mineralogy of the Moon from the Diviner Lunar Radiometer
B. T. Greenhagen et al.

1510 Highly Silicic Compositions on the Moon
T. D. Glotch et al.
Remote thermal emission spectroscopy reveals the existence of complex igneous processes on the Moon.

1513 Rainforest Aerosols as Biogenic Nuclei of Clouds and Precipitation in the Amazon
U. Pöschl et al.
The majority of cloud condensation nuclei in the Amazon during the wet season are derived from biogenic precursors.
>> Perspective p. 1474; Research Article p. 1488

1516 Melting of Peridotite to 140 Gigapascals
G. Fiquet et al.
High-temperature and high-pressure experiments reveal details about how and where the mantle melts.

1518 A Test of the Snowball Theory for the Rate of Evolution of Hybrid Incompatibilities
D. R. Matute et al.

1521 Hybrid Incompatibility “Snowballs” Between Solanum Species
L. C. Mayle and T. Nakazato
Two studies support the theory that the number of genes involved in hybrid incompatibility increases faster than linearly.

1523 The Ecological Significance of Tool Use in New Caledonian Crows
C. Rutz et al.
Stable isotope analysis reveals the nutritional benefits of tool use in wild New Caledonian crows.

1526 Structural Basis for Activation of Class Ib Ribonucleotide Reductase
A. K. Boal et al.
A single protein activates two different metalloenzymes by distinct chemistries.
>> Perspective p. 1475

1530 Bifurcation of Toll-Like Receptor 9 Signaling by Adaptor Protein 3
M. Sasai et al.
Compartmentalization of signaling components allows induction of distinct pathways downstream of a pathogen receptor.

1534 Differential Arginylation of Actin Isoforms Is Regulated by Coding Sequence–Dependent Degradation
F. Zhang et al.
The translational speed of proteins influences whether they are cotranslationally degraded after arginylation.
>> Perspective p. 1473

1537 MiR-16 Targets the Serotonin Transporter: A New Facet for Adaptive Responses to Antidepressants
A. Baudry et al.
The uptake transporter for a key neurotransmitter is regulated by a microRNA, yielding new insight into how Prozac functions.

1541 Relating Introspective Accuracy to Individual Differences in Brain Structure
S. M. Fleming et al.
Individual differences in the capacity for introspection are reflected in structural variation in the frontal lobe.
>> Perspective p. 1478

CONTENTS continued >>
Fast Vesicle Fusion in Living Cells Requires at Least Three SNARE Complexes
R. Mohrmann et al.
Membrane fusion proteins cooperate to promote rapid secretory vesicle exocytosis from neuroendocrine cells.
10.1126/science.11997080

A “light pipe” delivers tiny objects across infant experiences shape adult attributes.
Research supports the idea that early fast-growing boys have more sex as men.

How to Train Your Robot (to Lie)
K. Inoue
Chromosome Improves Mouse Somatic Cell Nuclear Transfer
10.1126/science.11994174

IDH2 Mutations in Patients with d-2-Hydroxyglutaric Aciduria
M. Kranendijk et al.
A mutation that changes the specificity of an enzyme in human cancer is also found in an inherited metabolic disorder.
10.1126/science.1192632

Propane Respiration Jump-Starts Microbial Response to a Deep Oil Spill
D. L. Valentine et al.
Hydrocarbon gases were the first compounds that bacteria degraded in deep underwater petroleum plumes.
10.1126/science.1196830

Impeding Xist Expression from the Active X Chromosome Improves Mouse Somatic Cell Nuclear Transfer
K. Inoue et al.
Efficiency of mouse nuclear transfer was improved by correcting aberrant gene expression on the active X chromosome.
10.1126/science.1193134

Research Article: Characterization of the Extrinsic Apoptotic Pathway in the Basal Chordate Amphioxus
S. Yuan et al.
Death domain–dependent signaling in the basal chordate amphioxus suggests that extrinsic apoptotic signaling is not restricted to vertebrates.

Perspective: Domain Recombination—A Workhorse for Evolutionary Innovation
C. Apic and R. B. Russell
Firm evidence for domain shuffling as a means of evolving new functions may lead us to the creation of combinations of practical benefit.

Perspective: Signals—Tinkering with Domains
E. Bornberg-Bauer
Binding domains in signaling proteins can tolerate sequence variation but still bind ligands and be structurally stable.

Review: ABL Tyrosine Kinases—Evolution of Function, Regulation, and Specificity
J. Colicelli
Insight into the regulation of ABL-family tyrosine kinases could facilitate development of therapies for malignancies driven by ABL fusion proteins.

REVIEW: ABL Tyrosine Kinases—Evolution
R. N. Kulkarni
The incretin hormone gastric inhibitory polypeptide may be a promising therapeutic target for type 2 diabetes.

Commentary: A Multi-Level Systems Perspective for the Science of Team Science
K. Börner et al.
Understanding how teams function is vital, because they are increasingly dominating the production of high-impact science.

Epigenetic signatures akin to genetic fingerprints may correlate with a common genetic trait.
Mutations of the X-linked gene PTCHD1 are associated with autism spectrum disorders and intellectual disability.

RESEARCH ARTICLE: Personalized Epigenomic Signatures That Are Stable Over Time and Covary with Body Mass Index
A. P. Feinberg et al.

Evolutionary Signatures Are Stable Over Time and Covary with Body Mass Index

RESEARCH ARTICLE: Personalized Epigenomic Signatures That Are Stable Over Time and Covary with Body Mass Index
A. P. Feinberg et al.

Epigenetic signatures akin to genetic fingerprints may correlate with a common genetic trait.

RESEARCH ARTICLE: Disruption at the PTCHD1 Locus on Xp22.11 in Autism Spectrum Disorder and Intellectual Disability
A. Noor et al.
Mutations of the X-linked gene PTCHD1 are associated with autism spectrum disorders and intellectual disability.

Integrating Medicine and Science
Evolution III–Domains for Change
G. Apic and R. B. Russell
Firm evidence for domain shuffling as a means of evolving new functions may lead us to the creation of combinations of practical benefit.

Perspective: Domain Recombination—A Workhorse for Evolutionary Innovation
C. Apic and R. B. Russell
