COVER
Multiwavelength extreme ultraviolet image of the Sun taken by the Solar Dynamics Observatory’s Atmospheric Imaging Assembly. Colors represent different gas temperatures: ~800,000 kelvin (K) (blue), ~1.3 million K (green), and ~2 million K (red). New observations reveal a link between hot plasma and jets propelled upward from the region immediately above the Sun’s surface and help explain why the Sun’s outer atmosphere, or corona, is much hotter than its surface. See page 55.

50 Freshwater Methane Emissions Offset the Continental Carbon Sink
   D. Bastviken et al.
   Inland freshwaters, which include lakes, reservoirs, streams, and rivers, may emit far more methane than previously thought.

RESEARCH ARTICLE

51 Biscrolling Nanotube Sheets and Functional Guests into Yarns
   M. D. Lima et al.
   Carbon nanotube sheets can support very large fractions of a second material, such as a superconductor or a catalyst.

REPORTS

55 The Origins of Hot Plasma in the Solar Corona
   B. De Pontieu et al.
   The solar corona is heated by jets of plasma propelled upward from the region immediately above the Sun’s surface.

58 Universal Quantum Viscosity in a Unitary Fermi Gas
   C. Cao et al.
   Viscosity studies of an ultracold gas of $^6$Li atoms in two temperature regimes enable comparison with a string theory limit.

61 Time-Resolved Holography with Photoelectrons
   Y. Huismans et al.
   The interference pattern produced by photoelectrons provides holographic snapshots of the photoinization process.

64 Spin Crossover in Ferropericlase at High Pressure: A Seismologically Transparent Transition?
   D. Antonangeli et al.
   An iron spin transition has no effect on the seismologic properties of lower-mantle minerals.

67 Small Interannual Variability of Global Atmospheric Hydroxyl
   S. A. Montzka et al.
   The abundance of the highly reactive hydroxyl radical is well buffered against perturbations.

70 The Role of Ammonites in the Mesozoic Marine Food Web Revealed by Jaw Preservation
   I. Kruta et al.
   Analysis of x-ray microtomographic reconstructions of ammonite fossils reveal their feeding habits.
   >> Perspective p. 37

73 Developmental Plasticity in Sexual Roles of Butterfly Species Drives Mutual Sexual Ornamentation
   K. L. Prudic et al.
   A butterfly switches sexual signaling and mate preferences depending on environmental temperatures during development.
   >> Science Podcast

76 Vernalization-Mediated Epigenetic Silencing by a Long Intrinsic Noncoding RNA
   J. B. Heo and S. Sung
   Spring flowering enabled by a winter chill is regulated by interplay between protein-coding and noncoding RNA transcripts.
   >> Perspective p. 36

80 Rotational Movement of the Formin mDia1 Along the Double Helical Strand of an Actin Filament
   H. Mizuno et al.
   Visualization of formin protein rotating along an actin filament gives insight into how it promotes actin assembly.
   >> Perspective p. 39

83 Spontaneous Cortical Activity Reveals Hallmarks of an Optimal Internal Model of the Environment
   P. Berkes et al.
   Internal models of the environment optimize as the brain develops.

87 Electrical Synapses Control Hippocampal Contributions to Fear Learning and Memory
   S. Bissiere et al.
   Neuronal gap-junction channels containing connexin 36 proteins participate in consolidation of fear memories.

91 Structure of Precursor-Bound NifEN: A Nitrogenase FeMo Cofactor Maturase/Insertase
   J. T. Kaiser et al.
   A metalloprotein structure involved in nitrogen fixation offers insight into metal-cluster insertion in nitrogenase.
Discovery of Powerful Gamma-Ray Flares from the Crab Nebula
M. Tovani et al.
10.1126/science.1200083

Gamma-Ray Flares from the Crab Nebula
A. A. Abd et al.
Gamma-ray observations of the Crab Nebula by two different space telescopes challenge particle acceleration theory.

10.1126/science.1201365

Seismic Detection of the Lunar Core
R. C. Weber et al.
Reinterpreted Apollo-era seismic data from the Moon reveal a solid inner core and a fluid outer core.
10.1126/science.1199375

A Persistent Oxygen Anomaly Reveals the Fate of Spilled Methane in the Deep Gulf of Mexico
J. D. Kessler et al.
Methane released during the Deepwater Horizon blowout was degraded by methanotrophic bacteria.
10.1126/science.1199697

Human Tears Contain a Chemosignal
S. Gelstein et al.
Merely sniffing women’s negative emotional tears reduces sexual arousal in men.
10.1126/science.1198331

Global Tissue Revolutions in a Morphogenetic Movement Controlling Elongation
S. L. Haigo and D. Bilder
The ellipsoid shape of the Drosophila egg is controlled by global tissue revolutions that polarize the matrix.
10.1126/science.1199424
