COVER
Tens of thousands of books appear in this photograph of the interior of the sculpture Idiom, by Matej Krén. On page 176, Michel et al. describe an even larger collection: a 5.2-million-book corpus containing 4% of all books ever published. Statistical analysis of this corpus makes it possible to study cultural trends quantitatively.

REVIEW
171 In Situ Studies of Chemistry and Structure of Materials in Reactive Environments
F. (F.) Tao and M. Salmeron

BREVIA
175 Complex Diel Cycles of Gene Expression in Coral-Algal Symbiosis
O. Levy et al.
Rhythmically expressed genes in reef-building corals may be required to deal with oxidative stress and the coral-algal symbiosis.

RESEARCH ARTICLE
176 Quantitative Analysis of Culture Using Millions of Digitized Books
J.-B. Michel et al.
Linguistic and cultural changes are revealed through the analyses of words appearing in books.
>> News story p. 135; The Gonzo Scientist p. 121

REPORTS
183 A Biological Solution to a Fundamental Distributed Computing Problem
Y. Afek et al.
Modeling of development in the fruit fly yields an algorithm useful in designing wireless communication networks.
186 Observation of Half-Height Magnetization Steps in Sr₂RuO₄
J. Jang et al.
The magnetic response of an exotic superconductor suggests that vortices with half a quantum of flux are present.
189 Light-Induced Superconductivity in a Stripe-Ordered Cuprate
D. Fausti et al.
Laser pulses are used to enable coherent transport between the copper oxide planes of a cuprate superconductor.
192 Electron Vortex Beams with High Quanta of Orbital Angular Momentum
B. J. McMorran et al.
Diffraction holograms are used to create electron vortex beams that should enable higher-resolution imaging.
>> Perspective p. 155
195 Solvent-Free Oxidation of Primary Carbon-Hydrogen Bonds in Toluene Using Au-Pd Alloy Nanoparticles
L. Kesavan et al.
A gold- and palladium-based catalyst can be used to oxidize toluene and form a commercially useful ester.
199 Supracolloidal Reaction Kinetics of Janus Spheres
Q. Chen et al.
Colloidal particles that are charged on one side, and hydrophobic on the other, can form chiral helices in salt solutions.
202 The Deglacial Evolution of North Atlantic Deep Convection
D. J. R. Thornalley
Radiocarbon data reveal changes in the timing and strength of deep ocean convection during the last glacial termination.
>> Perspective p. 156
206 A Basal Dinosaur from the Dawn of the Dinosaur Era in Southwestern Pangaea
R. N. Martinez et al.
Two hundred thirty million years ago, in what is now Argentina, dinosaurs could be found as the dominant carnivores or as small herbivores.
>> News story p. 134
211 Writing About Testing Worries Boosts Exam Performance in the Classroom
G. Ramirez and S. L. Beilock
A brief classroom intervention helps remove anxiety from the testing situation.
>> Science Podcast
214 Genomic Signatures Predict Migration and Spawning Failure in Wild Canadian Salmon
K. M. Miller et al.
High mortality of sockeye salmon in the Fraser River is associated with signals of metabolic and immune stress.
217 The Structure of Human 5-Lipoxygenase
N. C. Gilbert
Substitution of a destabilizing sequence has allowed crystallization of a key enzyme of the inflammatory response.
220 Light-Driven Changes in Energy Metabolism Directly Entrain the Cyanobacterial Circadian Oscillator
M. J. Rust et al.
Cyanobacterial circadian clock components are directly coupled to the metabolic status of the cell through interactions with adenine nucleotides.
223 Suppression of Avian Influenza Transmission in Genetically Modified Chickens
J. Lyall et al.
Transgenic birds expressing a short hairpin RNA that blocks viral polymerase hinder influenza transmission.
>> News story p. 132; Science Podcast
226 Human Tears Contain a Chemosignal
S. Gelstein et al.
Merely sniffing women’s negative emotional tears reduces sexual arousal in men.
