Biobreakthroughs begin with the smallest spark.
Biokinetic.

Knockout your gene of interest with the power of CompoZr® ZFN technology.

Generate knockouts faster than ever with the precision of award-winning CompoZr® ZFN technology from Sigma® Life Science. Choose from a selection of nearly 500 pre-validated CompoZr ZFN knockout reagents and help push your applications closer to breakthroughs and beyond.

Target your gene for exceptional results.

R&D Systems Quantikine® ELISAs

The Most Referenced Immunoassays

A direct measure of product quality is the frequency of citations in the scientific literature. R&D Systems has more than 20 years of experience designing, testing, and optimizing the most cited ELISA kits in the world. Find out why scientists trust R&D Systems ELISAs more than any other brand.

Approximately 42% of Referenced Immunoassays are Developed and Manufactured by R&D Systems. A survey of 860 manuscripts from 44 journals was conducted to compare the number of citations specifying the use of R&D Systems ELISAs to the number citing ELISAs from other commercial sources. A total of 433 ELISA citations referencing immunoassays from 66 different vendors were identified in the survey.

NEW Quantikine ELISA Kits
- α1-Acid Glycoprotein
- Angiopoietin-like 3
- Cathepsin V
- Clusterin
- Dkk-1
- EGF R/ErbB1
- EG-VEGF/PK1
- Fetuin A
- FGF-21
- Galectin-3
- Gas 6
- GDF-15
- IL-17A/F Heterodimer
- IL-19
- Lipocalin-2/NGAL
- MBL
- Proprotein Convertase 9/PCSK9
- Periostin/OSF-2
- Progranulin
- ST2/IL-1 R4
- Thrombomodulin/CD141
- Tie-1
- TIM-1/KIM-1

Thank you ECL™ Plus, you’ve been great.

For every success there’s a successor. It’s called progress. So while we knew we had something special in Amersham™ ECL Plus, our Western blotting team was quietly working on the next generation of detection reagent. The result: a new substrate that operates with superior levels of sensitivity, signal intensity and stability than even its famous predecessor, making it an excellent choice for CCD imagers. Welcome to ECL Prime.

Breakthrough in 5-hmC quantitation for epigenetics

Interested in simplifying the study of DNA methylation, particularly 5-hydroxymethylcytosine? Try the EpiMark™ 5-hmC and 5-mC Analysis Kit, a robust enzymatic method for the locus-specific detection of methylated (5-mC) and hydroxymethylated (5-hmC) cytosine. As the first commercially available PCR-based kit to reproducibly identify and quantitate the presence of 5-hmC, this simple 3-step protocol will expand your potential for epigenetics research and biomarker discovery.

Identify and quantitate methylation states with the EpiMark™ 5-hmC and 5-mC Analysis Kit

Advantages:
• Reproducible quantitation of 5-hmC and 5-mC
• Easy-to-use protocols
• Compatible with existing techniques (PCR)
• Amenable to high throughput

Visit neb.com/epigenetics to learn more, and explore the complete listing of EpiMark validated products from NEB.
Go Xtreme!
Roche New X-tremeGENE Transfection Reagents

Use our new powerful transfection reagents to:

- Efficiently transfect a broad spectrum of cells, including difficult-to-transfect cell lines.
- Generate physiologically relevant results using low cytotoxic transfection reagents.
- Avoid time-consuming optimization steps using a fast, reliable protocol.

For more information, visit www.x-tremegene.roche.com

---

X-tremeGENE 9 and HP DNA Transfection Reagents consistently outperform competitor reagents. HeLa cells were transfected with a luciferase expression plasmid using X-tremeGENE Transfection Reagents and six different competitor reagents (Comp L2K - Es).
INTRODUCING

AAAS MemberCentral

The exclusive new website for the AAAS member community.

AAAS MemberCentral is a new website focused on helping you — the scientists, engineers, educators, students, policymakers, and concerned citizens who make up the AAAS community — connect like never before.

On MemberCentral you can contribute to discussion groups or blogs, participate in a webinar, or share photos of your field research. You can exchange ideas, learn about your fellow members, and gain fresh insights into issues that matter to you the most. MemberCentral is also an easy access point for a wide variety of other AAAS membership benefits, like discounts on cars and books, travel opportunities, and more.

Experience MemberCentral for yourself. Visit MemberCentral.aaas.org today and log in using your Science online username and password.
2011 ASPIRE Hemophilia Research Awards

Pfizer is proud to announce the Advancing Science through Pfizer – Investigator Research Exchange (ASPIRE) 2011 Investigator Awards in Hemophilia Research, a competitive, peer-reviewed grants program sponsored by Pfizer for investigators in the United States.

Mission

• To support basic science, translational and clinical research through a competitive grants program that advances medical knowledge in the pathogenesis and treatment of hemophilia.
• To support academic research as well as the career development of promising young and established scientists.

Area of Research Focus

Pfizer will support competitive grant programs which address one of the following areas in Hemophilia A and/or Hemophilia B.

• Epidemiology / burden of disease / Outcomes Research
• Patient adherence to prescribed regimen
• Routine prophylaxis and preventative treatment
• Surgical prophylaxis, dosing
• On Demand dosing
• Treatment of inhibitors: Immune Tolerance Therapy, inhibitor bypass therapy
• Switching experience
• Management of adolescent Hemophilia patients & quality of life
• Management of the aging hemophilia population
• Basic science: Point of differentiation study
• Clinical monitoring of hemophilia treatment
• Recovery experience (hemophilia B patients)

Application & Selection Process

Application is open to US investigators. Selection of research proposals will be performed by an independent, external expert panel comprised of nationally known academic clinicians. Project duration should be 1-3 years and should be approximately $100,000/year, inclusive of overhead costs (capped at 28%).

FTIR SPECTROSCOPY
The MicroLab (ML) Analyzer with DialPathTM Technology offers a completely new approach to transmission fourier transform infrared (FTIR) spectroscopy of liquids. DialPath Technology makes the analysis of liquid samples as easy and fast as attenuated total reflection (ATR), yet offers the longer pathlengths that only transmission measurements can provide. The high-performing FTIR spectrometer occupies just eight square inches on a lab bench. The DialPath technology offers the user their choice of three different pathlengths, which are specified when the system is ordered, affording a FTIR liquids analyzer with exceptional versatility, ease of use, and performance in multi-application environments. There is no reason to use traditional demountable liquid cells, which can leak, require spacers, may fringe, are difficult to fill and clean, and are particularly difficult to use with more viscous samples. The DialPath-equipped ML readily accommodates samples with a wide range of viscosities.

CHEMILUMINESCENT REAGENT
Amersham ECL Prime Western blotting reagent is a highly-sensitive reagent characterized by stable signal emission up to three hours after addition of the reagent, allowing for the possibility of repeated exposures and making it easier to process several blots in the same experimental run. High signal intensity means that proteins may be detected using more dilute primary and secondary antibodies, which reduces background noise and reagent consumption. Amersham ECL Prime is optimized for imaging with ImageQuant LAS 4000 (CCD-based imaging) and is compatible with Amersham Hyperfilm. The reagent is also compatible with Rainbow Molecular Weight Markers and Amersham ECL DualVue Western Blotting Markers. It is optimized for use with Amersham Hybond-P (PVDF) membranes and compatible with Amersham Hybond-ECL (nitrocellulose) membranes. The ECL-based detection method negates the need for handling hazardous radioisotopes, and enables faster, more sensitive, and more flexible protein analysis.

DNA METHYLATION ANALYSIS
A suite of new and validated products have been designed to simplify DNA methylation analysis for epigenetics researchers. These enzyme-based solutions address some of the challenges of the current methods, including the lack of a reproducible method for the analysis and quantitation of 5-hydroxymethylcytosine (5-hmC) in the epigenome. EpiMark validated products include a family of methylation-dependent restriction enzymes (MspI, FspEI, and LpnPI), which excise 32-base pair fragments from whole genomes. These fragments contain centrally located hydroxymethylated (5-hmC) or methylated (5-mC) residues, and can be subsequently extracted and sequenced. This method is less harsh than bisulfite conversion and is suitable for whole methylome analysis. The EpiMark 5-hmC and 5-mC Analysis Kit is a robust method for the identification and detection of 5-hmC and 5-mC within a specific locus. Additionally, it is compatible with existing analysis techniques and is amenable to high throughput.

GEL PERMEATION CHROMATOGRAPHY
The new SEC-3010 triple detector system sets a new standard for high-performance characterization of polymers and proteins using Gel Permeation Chromatography/Size Exclusion Chromatography (GPC/SEC). The SEC-3010 triple detector system is a complete GPC system comprising pump, autosampler, viscosity/refractive index detector, multi-angle light scattering detector, and ParSEC enhanced software. The patented design of the SEC-3010 Viscosity/Refractive Index Detector allows the simultaneous determination of the refractive index and the intrinsic viscosity of a polymer solution. With its sophisticated technology, it overcomes the disadvantages usually encountered when using coupled detectors. The SEC-3010 system offers a unique combination of comprehensive capabilities, simple, intuitive control, and leading edge sensitivity all in a remarkably small laboratory footprint.

HIGH THROUGHPUT EVAPORATION SYSTEM
The HT-4X centrifugal evaporation system provides the ideal solution for overcoming evaporation bottlenecks in high throughput and production laboratories. Built to the highest specifications, the HT-4X makes demanding applications routine. Corrosive vapors may be removed by the standard system, an inert purge option allows safe evaporation of flammable solvents, and an optional facility is provided for fast sample lyophilization. An innovative built-in dual chamber refrigerated condenser, which combines a powerful cryopump and solvent recovery system, together with extra powerful infrared lamps accelerates the speed of evaporation, even for high boiling point solvents. In addition, efficient chamber cooling between runs is particularly useful to protect thermally sensitive samples when run immediately after higher boiling point solvents. The system also offers an auto defrosting condenser option and novel functions, such as auto shutdown and auto solvent selection, making it easy to use.

Imagine if Otto Warburg had a Seahorse XF Extracellular Flux Analyzer...

Finally, a real-time, kinetic measurement of the Warburg Effect, glucose & glutamine addictions, and fatty acid oxidation of cancer cells in a microplate.

Seahorse’s award winning XF Extracellular Flux Analyzers provide an easy way to:

- Evaluate the role of oncogenes and tumor suppressor genes in energy metabolism and tumorigenesis
- Detect HIF-1 and drug mediated effects on mitochondrial respiration and glycolysis
- Determine which energy substrates are preferentially used by tumor cells
- Measure the dynamic contributions of OXPHOS & aerobic glycolysis
- Validate genes that target tumor metabolism

Measuring cancer metabolism is so easy now!
