False-colored atomic force micrograph of two types of molecules forming a mixed self-assembled monolayer on a gold surface. The two molecules differ in height by 0.2 nanometers, giving the appearance of ripples. This image was awarded first place in the photography category in the 2010 Science/NSF International Science & Engineering Visualization Challenge. The winning entries are featured in a special section starting on page 847 and at www.sciencemag.org/special/vis2010/.

Image: Seth B. Darling, Argonne National Laboratory; and Steven J. Sibener, University of Chicago
ESSAYS
872 Genome-Sequencing Anniversary:
A Celebration of the Genome, Part III
S. Jasanoff
What Does a “Normal” Human Genome Look Like?
M. V. Olson
Of Mice and Humans
S. Yamanaka
Human Genome Sequencing: Celebrating 10 Years
L. Al-Gazali
Gene Patents: The Shadow of Uncertainty
R. Cook-Deegan
The Genomic Foundation Is Shifting
J. S. Mattick
Famine in the Presence of the Genomic Data Feast
E. Hoal
>> News & Analysis p. 838; Policy Forum p. 861

BREVIA
876 Synthetic Clonal Reproduction Through Seeds
M. P. A. Marimuthu et al.
Clonal reproduction is engineered in a sexual plant by manipulating conserved genes controlling meiosis.

RESEARCH ARTICLES
877 Extended Nucleation of the 1999 Mw 7.6 Izmit Earthquake
M. Bouchon et al.
Low-frequency seismic events may have been part of slip accumulation before a large earthquake.
>> News & Analysis p. 836
881 The Crystal Structure of the Signal Recognition Particle in Complex with Its Receptor
S. F. Ataide et al.
Guanine triphosphate controls changes in the signal recognition particle that facilitate transfer of the signal sequence to the translocon.

REPORTS
886 Metallic and Insulating Oxide Interfaces Controlled by Electronic Correlations
H. W. Jang et al.
The strength of electronic correlations dictates the transport properties of oxide interfaces.
888 Time-Reversed Lasing and Interferometric Control of Absorption
W. Wan et al.
Tuning the amplitude and phase of incident light can induce an enhancement of the optical absorption process.
892 Quantum Reflection of He2 Several Nanometers Above a Grating Surface
B. S. Zhao et al.
The helium molecule can interact at large distances with the evanescent repulsion potential of the surface.
894 Spin Selectivity in Electron Transmission Through Self-Assembled Monolayers of Double-Stranded DNA
B. Göhler et al.
Photoelectrons emitted from a DNA-covered gold surface can have an unbalanced spin population of up to 60%.
>> Perspective p. 864
897 Capillary Forces in Suspension Rheology
E. Koos and N. Willenbacher
The addition of a small amount of a nonwetting immiscible fluid to a suspension can drastically alter its rheological properties.
>> Perspective p. 868
900 Steric Control of the Reaction of CH Stretch–Excited CH2 with Chlorine Atom
F. Wang et al.
Spectroscopy elucidates the complex interplay between orientational and vibrational effects in a simple chemical reaction.
903 The Magnitude and Duration of Late Ordovician–Early Silurian Glaciation
S. Finnegan et al.
Carbonate isotopes reveal a link between past ocean temperatures and mass extinction.
906 Hibernation in Black Bears: Independence of Metabolic Suppression from Body Temperature
Ø. Tøien et al.
Hibernating black bears suppress their metabolic rate to 25% of normal, but only slightly reduce their body temperature.
>> Perspective p. 866
909 LysM-Type Mycorrhizal Receptor Recruited for Rhizobium Symbiosis in Nonlegume Parasponia
R. Op den Camp et al.
Parasponia uses a mycorrhizal signaling receptor essential for arbuscule formation to control rhizobium nodule symbiosis.
>> Perspective p. 865
912 The Antiproliferative Action of Progestosterone in Uterine Epithelium Is Mediated by Hand2
Q. Li et al.
A progestosterone-regulated transcription factor regulates stromal-epithelial communication in early pregnancy.
>> Perspective p. 863
916 Distinct Properties of the XY Pseudoautosomal Region Crucial for Male Meiosis
L. Kauppi et al.
Recombination between the sex chromosomes during sperm formation is controlled by a splicing isoform of the SPO11 protein.
>> Perspective p. 870
920 Classic Selective Sweeps Were Rare in Recent Human Evolution
R. D. Hernandez et al.
Much human genetic variation is likely due to purifying selection against deleterious mutations.
924 Early Tagging of Cortical Networks Is Required for the Formation of Enduring Associative Memory
E. Lesburguères et al.
Tagging of cortical networks at the time of encoding is crucial for long-lasting associative memories.
>> Perspective p. 869
928 Microtubule Stabilization Reduces Scarring and Causes Axon Regeneration After Spinal Cord Injury
F. Hellal et al.
Taxol stimulates the capacity of axons to grow after spinal cord injury.

CONTENTS continued >>
arthropod exoskeletons can turn into fossils. Chemical bonds hold clues to how flexible the exoskeletons were. The Mystery of the Stone Scorpion reveals that ancient scorpions were as flexible as modern ones. The study also suggests that the flexibility of ancient scorpions could have helped them adapt to their environment.

T. H. Fang, Plasticity in Gradient Nano-Grained Copper, reveals extraordinary tensile properties. The study shows that the copper can be deformed without breaking, thanks to its unique microstructure. This could lead to the development of new materials with improved strength and ductility.

Emplacement of the Central Atlantic Magmatic Province 200 million years ago greatly elevated atmospheric CO₂, as M. F. Schaller, et al. show. This study highlights the potential impact of volcanic activity on the Earth's climate.

The Biodiversity and Ecosystem Services report highlights that biodiversity is crucial for ecosystem health. The study also shows that human activities are leading to a loss of biodiversity.

A controversial new study flies in the face of a century of physiological research. A. P. Carter, et al. show that the dynein motor changes its conformation during motility. This could have implications for understanding muscle function.

Chronic pollution of the Hudson River, New York, results in rapid evolution of resistance to the pollutant. I. Wirgin, et al. demonstrate this by studying invertebrates in the river.

The production of false leads by automated curation may be co-opted to promote cancer cell survival. R. Ahmad, et al. show that a protein involved in cancer cell survival is involved in the production of false leads.

To see how scientists do it, we feature a graphic novel about how a science illustrator and animator has moved on to become a professional. J. Carpenter, et al. share their experiences.
