

The BD Accuri® C6 personal flow cytometer

Helping all people
live healthy lives

Flow cytometry within reach.®

The BD Accuri® C6 is a personal flow cytometer that puts flow cytometry within reach. It gives you 4-color cell analysis in an affordable, transportable, and easy-to-use format.

Measuring just 11 x 14.75 x 16.5 inches (27.9 x 37.5 x 41.9 centimeters) and weighing just 30 pounds (13.6 kilograms), the BD Accuri C6 gives both novice and experienced researchers the power of multicolor analysis, when and where you need it. BD CFlow® software's intuitive interface guides you through workflows, making it easy to begin collecting and analyzing data—even if you have little flow cytometry knowledge or know-how.

Setup and maintenance are also simplified to increase availability and up-time. In the event service is required, just pack up the system and return it. A loaner system will be provided while your system is serviced.

For more information about how you can more easily access the power of flow cytometry in your lab, visit bdbiosciences.com/go/accuri.

Flow cytometry within reach.®

RabMAbs[®] = BETTER STEM CELL ANTIBODIES

- Antibodies to pluripotent transcription factors: LIN28, Nanog, OCT4, SOX2 and more
- Validated in WB, IHC, IF, IP and FACS
- Over 6800 antibodies and counting

Why RabMAbs make better stem cell antibodies:

The rabbit immune system responds better to difficult antigens than the mouse immune system. This is critical for the development of high quality antibodies. Epitomics Rabbit Monoclonal Antibodies (RabMAbs) provide the combined benefits of superior antigen recognition of the rabbit immune system with the specificity and consistency of a monoclonal antibody, bringing you the highest quality antibody possible. Epitomics has developed various high quality stem cell marker antibodies, including a panel of RabMAbs to core pluripotent cell markers (e.g. LIN28, Nanog, OCT4, SOX2).

SOX2

Immunohistochemical analysis of paraffin-embedded embryonal carcinoma using anti-SOX2 RabMAb (cat. #2683-1)

Nanog

Immunohistochemical analysis of paraffin-embedded human dysgerminoma tissue using anti-Nanog RabMAb (cat. #3369-1)

Is it science or art?

Check out our gallery...

Scientists from around the world have been submitting inspirational images from their cellular research into GE Healthcare's 2011 IN Cell Analyzer Image Competition.

Now it's your chance to vote for your favorite image and receive a limited edition, 2012 Image Competition calendar* featuring twelve of the most popular images as voted by you.

The winning images will be displayed on NBC Universal's high-definition screen in Times Square, New York, so you decide – which image best captures the art in science?

Cast your vote today at www.gelifesciences.com/incellcompetition

NEW PRODUCTS

PROTEIN INTERACTION ASSAY

The Flex-IP immunoprecipitation kit is designed for the detection of protein interactions by co-immunoprecipitation. Formulated to enable highly efficient antigen immunoprecipitation, the kit enables immunoprecipitation using less than 10 µg of antibody and is compatible for use with mouse, rabbit, goat, and human antibodies. Typical applications include the validation of protein interactions by co-immunoprecipitation and the immunoprecipitation of proteins from cells and cell-free reactions. Designed as a complete solution for immunoprecipitation experiments, the Flex-IP kit includes protein A/G agarose, control mouse IgG, lysis/wash buffer, stock NaCl solution, and SDS-PAGE buffer as well as spin columns and collection tubes. Each kit contains sufficient materials for 40 IP reactions and is optimally suited to confirm protein-protein interactions found in DUALhybrid, DUALmembrane, and DUALhunter screens. Flex-IP immunoprecipitations are performed using common IP procedures.

AFFINITY CHROMATOGRAPHY MEDIUM

Capto Blue affinity chromatography medium is for the capture of human serum albumin (HSA) as well as purification of HSA fusion proteins, blood coagulation factors, enzymes, and recombinant proteins at laboratory and process scales. Developed from Blue Sepharose 6 Fast Flow, Capto Blue medium is more chemically stable and has a more rigid agarose base matrix than its predecessor. These improvements allow faster flow rates and larger sample volumes, leading to higher throughput and improved process economy. Depending on the target molecule, the ligand functionality of Capto Blue may be modified through the use of appropriate buffer salts and buffer conductivity to increase selectivity for desired targets. Capto Blue medium's excellent chemical stability also ensures tolerance for sodium hydroxide, enabling repeated cleaning-in-place (CIP) procedures to remove tightly bound impurities and maintain capacity.

CELL LYSIS KIT

The new ProteaPrep Zwitterionic Cell Lysis Kit, Mass Spec Grade has been specially designed for the efficient recovery of purified protein lysates from biological samples. The ProteaPrep Zwitterionic Cell Lysis Reagent is a proprietary formulation containing a mixture of salts and nondenaturing detergents that have been optimized for efficient solubilization, extraction, and recovery of most proteins during cell lysis. The ProteaPrep Zwitterionic Cell Lysis Kit features our Progenta Zwitterionic Acid Labile Surfactant I (ZALS I), a powerful acid-cleavable detergent that alleviates the problems commonly associated with CHAPS, SDS, and other detergents in proteomics studies. After completing the cell lysis, the cell extract solution will not interfere with downstream sample preparation and analysis by techniques such as mass spectrometry, enzymatic digestions, 2D gel electrophoresis, and protein quantitation (e.g., Bradford and Lowry assays). The zwitterionic detergent helps to extract difficult to solubilize proteins found in cell membranes and organelles.

NANOPARTICLE DEVELOPMENT REAGENTS

A new group of PEGylation Reagents is specifically for use in the development of gold or silver nanoparticles, self-assembled monolayers, quantum dots, and magnetic particles. The high purity polyethylene glycol (PEG) compounds of defined chain length help produce precise surface characteristics and minimize nonspecific interactions, which are important for these applications. Two varieties are available: Methyl- and Carboxy-thiol PEGylation Reagents and Methyl- and Carboxy-lipoamide PEGylation Reagents. The thiols form dative bonds when bound to gold surfaces. Monodentate thiols, such as Methyl- and Carboxy-thiol PEGylation Reagents, can be easily removed by compounds such as DTT. Bidentate thiols, such as Methyl- and Carboxy-lipoamide PEGylation Reagents, provide an added level of stability to the nanostructure and are much more resistant to removal from the metal surface by DTT or similar reagents.

HUMAN CELL REPROGRAMMING mRNA

New highly modified synthetic 5-prime capped mRNA products have been designed for reprogramming of human cells. These ready-to-use products provide a simple, safe non-integrating methodology for reprogramming cell fate based on the administration of synthetic modified mRNA that greatly increases efficiency while reducing the innate antiviral response of viral protocols. Clinical applications of induced pluripotent stem cells (iPSCs) have traditionally been limited by the low efficiency of iPSC derivation and the fact that most protocols modify the genome to effect cellular reprogramming. Moreover, safe and effective means of directing the fate of patient-specific iPSCs toward clinically applicable cell types are not possible by viral methods. The ready-to-use, highly modified mRNAs include: Klf4, c-Myc, Oct4, Sox2, LIN28 mRNA, and eGFP control, in customized formats for research.

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information.

Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by *Science* or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.

AAAS ANNUAL MEETING

Be Part of a Winning Team

Vancouver is a dynamic, multicultural city set in a spectacular natural environment. It was the proud host of the 2010 Olympic and Paralympic Winter Games. In 2012 it hosts the world's annual Olympiad of Science, 16-20 February.

AAAS organizes an international conference annually—4 days of symposia, lectures, seminars, workshops, and poster sessions that cover every area of science, technology, and education. We also organize a unique community science showcase that offers an array of hands-on demonstrations and other family friendly activities.

Attendees constitute a highly educated, global market that promotes the effective use of research and practice.

They represent nearly all U.S. states and territories as well as up to 55 countries. Technologically savvy, our attendees are always looking for new and improved tools and resources.

Take this opportunity to select or design your sponsorship and secure your exhibit space.

For more information about sponsorship opportunities and the exhibition, contact Isabel Patterson, AIM Meetings, (703) 549-9500; ipatterson@aimmeetings.com. For the program, go to www.aaas.org/meetings.

AAAS thanks

THE  KAVLI FOUNDATION for its generous support of the Science Journalism Awards.

Built for efficiency.

Competent Cells from New England Biolabs.

Ensure successful transformations with NEB cloning strains and take advantage of:

- High transformation efficiencies
- Value pricing and no dry ice charges
- Convenient product formats, including single-use tubes

NEB Competent *E. coli* – building a strong foundation for your cloning experiments.

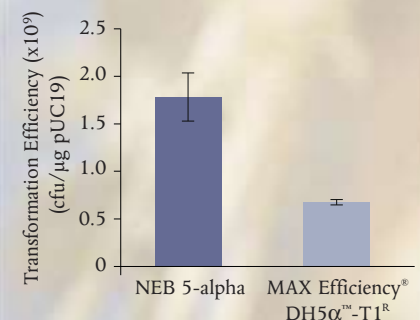

FREE SHIPPING OFFER

For the month of December, receive FREE SHIPPING on cloning competent cell purchases.

Visit www.neb5alpha.com for more information and a list of the competent cells included in this offer.

Valid in the US only.

Benefit from high transformation efficiencies with NEB 5-alpha.

The transformation efficiencies of NEB 5-alpha and MAX Efficiency DH5α-T1^R were compared using manufacturers' recommended protocols. Values shown are the average of triplicate experiments.
