Everything you need to measure mitochondrial (dys)function in cells

With the XF Cell Mito Stress Test Kit and the XF Analyzer you can confidently identify mitochondrial (dys)function, and measure mitochondrial response to stress.

**XF Cell Mito Stress Test Kit**
- Complete easy-to-use kit, including pre-calibrated, pre-tested reagents for 6 microplates
- Software wizard guides assay optimization, design, and interpretation
- Designed for use with the XF Analyzer
- Provides metrics essential to understanding cancer, aging, and metabolic, cardiovascular, and neurodegenerative diseases

Measuring cell metabolism is so easy now!
Cancer is a disease of cellular dysfunction involving a range of biological activities that promote unregulated proliferation. To help advance the understanding of this complex disease, R&D Systems offers an expansive selection of quality products, including high performance antibodies, proteins, ELISAs, & arrays, for investigating various cancer-related factors. Every product from R&D Systems undergoes rigorous quality control testing to ensure industry leading reliability.

Angiogenesis

- Angiopoietin-2 (Catalog # AF623)
  Human Gastrointestinal Cancer Tissue

Epithelial to Mesenchymal Transition

- E-Cadherin (Catalog # AF648)
  Human Epidermoid Carcinoma Cells

Cancer Biomarkers

- BRCA1 (Catalog # MAB22101)
  Human Breast Cancer Tissue

Inflammation

- EMAP-II (Catalog # AF1910)
  Human Colon Cancer Tissue

Growth Factor/Receptor Signaling

- Proteome Profiler™ 96 Phospho-RTK Antibody Array (Catalog # ARZ001)
  MDA-MB-453 Cell Line

Cancer Stem Cells

- MagCellect CD24+CD44+ Breast Cancer Stem Cell Isolation Kit (Catalog # MAGH111)
  MCF-7 Cell Line

Determining plant DNA content with the BD Accuri C6®

Flow cytometry within reach.

The BD Accuri® C6 flow cytometer offers a capable yet simple tool to rapidly identify plant DNA. The affordable, benchtop cytometer can help characterize the DNA content of newly discovered plant species and the impact of environmental changes on genome.

Measuring just 11 x 14.75 x 16.5 inches and weighing just 30 pounds, the BD Accuri C6 gives you the power of flow cytometry when you need it. Best of all, you don’t need to be a flow expert because BD CFlow® software’s intuitive interface will guide you from sample collection to analysis. For faster throughput, the BD CSampler® option offers reliable and easy-to-use automation with support for 48- and 96-well plates, and 24-tube racks for standard 12 x 75-mm tubes. Setup and maintenance are also simplified to increase availability and up time.

For more information about how you can more easily access the power of flow cytometry in your lab, visit bdbiosciences.com/go/dna.

Flow cytometry within reach.

Library Prep Reagents for Next Gen Sequencing

Isn’t it time to break away from the constraints of standard workflows for NGS sample prep? With NEBNext® reagents for DNA and RNA, take advantage of multiple product formats and custom options to tailor solutions for your specific needs.

Available for the leading sequencing platforms, NEBNext reagents allow you to take the next step in designing the workflow that works for you.

www.NEBNext.com

Scan this code to learn more about how NEBNext reagents deliver flexibility to your sample prep workflow

Need a code reader? Go to 2dscan.com from your mobile browser, search for ‘ScanLife’ in your app store or text SCAN to 43588

Illumina® is a registered trademark of Illumina, Inc.
Don’t miss the premier forum for the latest breakthroughs
bringing together over 17,000 attendees from over 60 countries. More than 6,000 proffered papers and hundreds of invited talks from leading experts will be presented, covering the full spectrum of cancer research, including basic, translational, clinical, and population research.

NEW in 2012:

• A revised format for the presentation of accepted clinical trials
• New session series titled Current Concepts and Controversies in Diagnostics, Therapeutics, and Prevention
• New poster session on clinical trials in progress
• A regulatory track with sessions on regulatory science and science policy
2012 MRS SPRING MEETING SYMPOSIA

Co-sponsored by the Japan Society of Applied Physics*

ELECTRONICS AND PHOTONICS
A Amorphous and Polycrystalline Thin-Film Silicon Science and Technology
B Heterogeneous Integration Challenges of MEMS, Sensor, and CMOS LSI*
C Interconnect Challenges for CMOS Technology—Materials, Processes, and Reliability for Downsizing, Packaging, and 3D Stacking
D Nanocontacts—Emerging Materials and Processing for Ohmicity and Rectification
E Materials and Physics of Emerging Nonvolatile Memories*
F Phase-Change Materials for Memory and Reconfigurable Electronics Applications
G Reliability and Materials Issues of III-V and II-VI Semiconductor Optical and Electron Devices and Materials II*
H Silicon Carbide—Materials, Processing, and Devices
I Recent Advances in Superconductors, Novel Compounds, and High-Tc Materials*
J Organic and Hybrid-Organic Electronics
K Advanced Materials and Processes for “Systems-on-Plastic”*
L Group IV Photonics for Sensing and Imaging*
M Optical Interconnects—Materials, Performance, and Applications

MATERIALS SCIENCE AND MATERIALS CHEMISTRY FOR ENERGY
N One-Dimensional Nanostructured Materials for Energy Conversion and Storage
O Next-Generation Energy Storage Materials and Systems
P Advanced Materials and Nanofactories for Hydrogen Storage and Carbon Capture
Q Titanium Dioxide Nanomaterials
R Bandgap Engineering and Interfaces of Metal Oxides for Energy
S Design of Materials for Sustainable Nuclear Energy
T Bio-inspired Materials for Energy Applications
U Materials for Catalysis in Energy
V Advanced Materials Processing for Scalable Solar-Cell Manufacturing II
W Nanostructured Solar Cells
Y Actinides—Basic Science, Applications, and Technology
Z Conjugated Organic Materials for Energy Conversion, Energy Storage, and Charge Transport

NANOSTRUCTURED MATERIALS AND DEVICES
AA Inorganic Nanowires and Nanotubes—Synthesis, Properties, and Device Applications*
BB Solution Synthesis of Inorganic Films and Nanostructured Materials

CC Hierarchically Self-assembled Materials—From Molecule to Nano and Beyond
DO De Novo Carbon Nanomaterials
EE New Functional Nanocarbon Devices*
FF Nanodiamond Particles and Related Materials—From Basic Science to Applications
GG Functional Inorganic Nanoparticle-Polymer Composites with Engineered Structures and Coupled Properties
HH Nanocomposites, Nanostructures, and Heterostructures of Correlated Oxide Systems*
II Nanoscale Materials Modification by Photon, Ion, and Electron Beams*
JJ Nanoscale Thermoelectrics—Materials and Transport Phenomena
KK Plasmonic Materials and Metamaterials
LL New Trends and Developments in Nanomagnetism
MM Topological Insulators

BIOLOGICAL, BIOMEDICAL AND BIO-INSPIRED MATERIALS
NN DNA Nanotechnology
OO Structure-Function Design Strategies for Bio-enabled Materials Systems
PP Manipulating Cellular Microenvironments
QQ Mechanobiology of Cells and Materials
RR Molecules to Materials—Multiscale Interfacial Phenomena in Biological and Bio-inspired Materials
SS Structure/Property Relationships in Biological and Biomimetic Materials at the Micro-, Nano-, and Atomic-Length Scales
TT Interfaces in Materials, Biology, and Physiology
UU Integration of Natural and Synthetic Biomaterials
VV Nanomedicine for Molecular Imaging and Therapy
WW Plasma Processing and Diagnostics for Life Sciences*

GENERAL MATERIALS SCIENCE
XX Computational Materials Design in Heterogeneous Systems
YY Rare-Earth-based Materials
ZZ Transforming Education in Materials Science and Engineering
AAA Synthesis, Fabrication, and Assembly of Functional Particles and Capsules
BBB Functional Materials and Ionic Liquids
CCC Local Probing Techniques and In-Situ Measurements in Materials Science

The resolution of light microscopy was long thought to be limited by the wavelength of light, but recent advances have far surpassed this barrier and the most recent technologies are now allowing for the super-resolution imaging of biomolecules at a subcellular level, including the visualizing membrane glycoproteins, observing physical interactions between proteins, and studying cellular processes in 3-D. This webinar will explore how some of the latest technologies can be applied and implemented to advance your research.

Our experts from the NIH Intramural Research Program will:

• Share their experiences using cutting-edge microscopy technologies
• Discuss the advantages, challenges, and limitations of current systems
• Provide advice on how you can best apply these technologies
• Answer questions submitted by you!

SPEAKERS
Hari Shroff, Ph.D.
National Institute of Biomedical Imaging and Bioengineering, NIH
Bethesda, MD

Sriram Subramaniam, Ph.D.
National Cancer Institute, NIH
Bethesda, MD

Clare M. Waterman, Ph.D.
National Heart, Lung and Blood Institute, NIH
Bethesda, MD

All speakers are part of the NIH Intramural Research Program.

STACKABLE DESICCATORS
Multi-Storey Cubic Desiccators overcome the space inefficiencies of traditional round desiccators which occupy a large bench area while providing only a small circular shelf for actual sample placement. This range of desiccators comprises four multi-shelved stackable cubic desiccators, which are made from highly transparent, noncorrosive, and shatterproof polycarbonate. The internal volumes range from 11 to 45 L with between two and six shelves, and this significantly enhances the storage capacity of the desiccators. Each unit has a full front door that uses a grease-free airtight vacuum seal, which ensures that a vacuum of 1 Torr over 72 hours is held. Also, a vacuum gauge is mounted on the top left hand side of the door while the three-way stopcock mounted on the left hand side of the chamber allows for the removal and replacement of the internal atmosphere as needed. Each unit is available in smoked acrylic to block ultraviolet light.

INVERTED LIGHT MICROSCOPE
The Axio Vert.A1 is an inverted microscope with extensive performance capabilities. For the first time, a compact cell culture microscope combines all standard contrasting techniques in a single stand. In transmitted light, the Axio Vert.A1 offers brightfield, phase contrast, polarization contrast, PlasDIC, VAREL, and improved Hoffmann modulation contrast (iHMC). The microscope is the only system in its class to also offer differential interference contrast (DIC). This makes it possible to record very fine structures in cells, enabling users to better assess cell cultures. In fluorescence applications, the Axio Vert.A1 uses long-life LED illumination. The entire image field is illuminated homogeneously; no alignment is necessary. As LED excitation light does not contain any undesired ultraviolet components, cell survival rate increases significantly. The Axio Vert.A1 has been specially designed so that it can be positioned directly beside the incubator or the sterile bench. Adapters allow comfortable, upright work in either a seated or standing position.
Carl Zeiss

PARP1 ENZYME ACTIVITY ASSAY
The PARP1 Enzyme Assay is designed for detection of poly (ADP-ribose) polymerase (PARP) activity and screening of activators and inhibitors. PARPs catalyze the addition of ADP-ribose moieties onto substrate proteins and play a role in DNA repair, chromatin structure, cell cycle, and cell death. The kit is a flexible, homogenous, no-wash assay for quantifying enzymatic activity. Based on patent-pending technology, this assay employs nicotinamidase to measure nicotinamide generated upon cleavage of NAD⁺ during PARP-mediated poly-ADP-ribosylation of a substrate, thereby providing a direct, positive signal assessment of the activity of PARP1 and PARP2. The new PARP assay utilizes a novel, patent-pending, fluorescently coupled enzyme assay for nicotinamide degradation to permit the use of native NAD⁺ substrate and flexibility with peptide/protein acceptor substrates.

ANTIBODY ARRAY
The Panorama Neurobiology Antibody Array is designed for fast protein expression analysis of hundreds of signaling targets that are indicative of neuronal health and development. The Panorama Neurobiology Antibody Array assesses a broader range of signaling targets, and is expected to provide the most comprehensive view available of the cell signaling and regulation pathways that are key to neuronal development and neurodegenerative disorders. The Panorama Neurobiology Antibody Array enables, within a single day, direct comparisons of neuronal protein expression patterns using a variety of serum, cell, or tissue extracts derived from humans, mice, or rats. The array’s 224 polyclonal and monoclonal antibodies are spotted in duplicate, high-density spots on a nitrocellulose-coated slide treated to reduce background fluorescence. Antibodies in the array are also available separately from the Sigma Life Science Antibody catalog of more than 50,000 antibodies.

BIO SPECTRO METER
The new Eppendorf BioSpectrometer combines accuracy and sensitivity with outstanding flexibility in a small robust instrument. The Eppendorf BioSpectrometer extends our current detection product line by offering scanning capabilities allowing routine and complex methods such as measuring cytotoxicity, proteins, fluorescent dyes, and more. The BioSpectrometer kinetic model features a temperature-controlled cuvette shaft that requires no additional accessories in order to study enzyme or substrate kinetics. Scanning spectrum as well as individual wavelength measurements can be monitored in the spectral range of 200 to 830 nm. Preprogrammed methods facilitate quick start applications and prevent errors, while a USB port is provided for simple data transfer. No PC is necessary to operate the system and integrated data processing options enable basic data processing directly on the device. Apart from standard cuvettes such as the Eppendorf UVette, the BioSpectrometer can also accommodate micro volume cuvettes.

**New Products**

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information. Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by Science or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.
