Three-dimensional computer models such as this one help researchers explore the mechanisms behind core-collapse supernovae, the violent death of short-lived massive stars. In the image, tubes represent paths of gas falling into a supernova, deflected by an accretion shockwave (horizontal width of 600 km); colors represent different velocities. The question of how stars explode is one of the "Mysteries of Astronomy" described in a special News package beginning on page 1090.

REPORTS

1133 The Detection and Characterization of a Nontransiting Planet by Transit Timing Variations
D. Nesvorný et al.
Analysis of the deviations in the orbit of a transiting exoplanet revealed an outer planet in the same planetary system.
>> Perspective p. 1121

1137 Tracking Cooper Pairs in a Cuprate Superconductor by Ultrafast Angle-Resolved Photoemission
C. L. Smallwood et al.
Time-resolved spectroscopy is used to probe the dynamics of electron pairing recovery in a high-temperature superconductor.

1140 Graphene Barristor, a Triode Device with a Gate-Controlled Schottky Barrier
H. Yang et al.
The absence of defects and surface oxides at a graphene-silicon interface enables voltage control of graphene devices.

1143 Tailoring Electrical Transport Across Grain Boundaries in Polycrystalline Graphene
A. W. Tsen et al.
Overlap between crystallites in vapor-grown graphene improves its electronic conductivity.

1147 Theory Untangles the High-Resolution Infrared Spectrum of the ortho-H₂-CO van der Waals Complex
P. Jankowski et al.
High-level calculations assign the unusually complex spectrum of a molecular pair implicated in interstellar chemistry.

1150 Secreted Kinase Phosphorylates Extracellular Proteins That Regulate Biominalization
V. S. Tagliabracci et al.
The elusive enzyme that modifies proteins involved in building bone and teeth has now been identified.

1154 Evolution of a Vertebrate Social Decision-Making Network
L. A. O’Connell and H. A. Hofmann
Across vertebrates, behaviorally relevant brain regions are remarkably conserved over 450 million years of evolution.

1157 Evolutionary Trade-Offs, Pareto Optimality, and the Geometry of Phenotype Space
O. Shoval et al.
The fitness of an organism can be modeled graphically to determine how phenotypic trade-offs are maximized.
>> Perspective p. 1114

1160 Chitin-Induced Dimerization Activates a Plant Immune Receptor
T. Liu et al.
Structural analysis shows how fungus-derived chitin dimerizes its receptor on target plants and triggers defense responses.

1164 Rocket Launcher Mechanism of Collaborative Actin Assembly Defined by Single-Molecule Imaging
D. Breitsprecher et al.
Triple-color microscopy suggests two factors interact to initiate actin formation and then separate as the filament grows.

1168 The Amyloid Precursor Protein Has a Flexible Transmembrane Domain and Binds Cholesterol
P. J. Barrett et al.
The structure of the APP transmembrane domain allows processive cleavage and cholesterol binding that may enhance cleavage.

1171 Computational Design of Self-Assembling Protein Nanomaterials with Atomic Level Accuracy
N. P. King et al.
A general computational method is used to design protein building blocks that self-assemble into target architectures.

1175 Generic Indicators for Loss of Resilience Before a Tipping Point Leading to Population Collapse
L. Dai et al.
Experiments in yeast confirm that statistical indicators can signal the approach of population crashes.

1178 B Cell Receptor Signal Transduction in the GC Is Short-Circuited by High Phosphatase Activity
A. M. Khalil et al.
Restricted B cell signaling in the areas responsible for immune memory cell production promotes affinity maturation.
>> Perspective p. 1120

1182 Restoring Voluntary Control of Locomotion after Paralyzing Spinal Cord Injury
R. van den Brand et al.
A rehabilitation program involving robotic neuroprosthetics restores previously paralyzed hindlimb function.
