

Science

There's only one
SIR ISAAC NEWTON

Sir Isaac Newton's contribution to science can only be described as unique. Over his lifetime, Newton offered insights into physics, mathematics, natural philosophy, and even alchemy, and is now considered by many to be one of the greatest scientists who ever lived. In 1687, the publication of his *Philosophiæ Naturalis Principia Mathematica* was an influential landmark in scientific thinking that defined the principles of universal gravitation and the laws of motion—setting the foundation that scientists would turn to for over 300 years.

Today, scientists from around the world turn to *Science*. With 700,000 print readers every week and 3.6 million unique visitors to the online site each month, *Science* reaches more people than any other scientific print publication or website. What's more, as part of the non-profit AAAS, the revenue generated by *Science* supports programs around the world that help inform science policymakers, enhance science diplomacy, strengthen the scientific workforce, and improve science education.

So if you want to reach physicists, mathematicians, life scientists, or even the occasional alchemist, there's only one *Science*. Visit *Science* today at sciencemag.org.
