Lake El’gygytgyn, measuring 12 kilometers in diameter and 170 meters in depth, is located in a meteorite impact crater 100 kilometers to the north of the Arctic Circle in northeastern Russia. An international drilling campaign recovered a sediment record from the bottom of the lake, which sheds new light on the climate history of the Arctic over the past 2.8 million years. See page 315.
REVIEW

310  The Exploration of Hot Nuclear Matter  
B. V. Jacak and B. Müller

RESEARCH ARTICLE

315  2.8 Million Years of Arctic Climate Change  
from Lake El’gygytgyn, NE Russia  
M. Melles et al.  
A sediment core from a Russian lake provides  
a high-latitude climate record where prior  
terrestrial records have been sparse.

331  Sulfate Burial Constraints on the  
Phanerozoic Sulfur Cycle  
I. Halevy et al.  
Sulfur isotopes from the stratigraphic  
record constrain evolving mass fluxes into  
sulfate-bearing evaporite sediments.

334  Rapid Variability of Seawater Chemistry  
Over the Past 130 Million Years  
U. G. Wortmann and A. Paytan  
Modeling the evolution of the marine sulfur  
cycle suggests that short intervals of rapid  
change punctuate long periods of stasis.  
>> Perspective p. 305

337  Identifying Influential and Susceptible  
Members of Social Networks  
S. Aral and D. Walker  
A randomized experiment based on product  
adoption among Facebook friends identified  
trend setters and followers.

341  Sex-Specific Adaptation Drives Early Sex  
Chromosome Evolution in Drosophila  
Q. Zhou and D. Bachtrog  
Evolutionarily new X and Y chromosomes  
evidence how selection for sexual function  
shapes sex chromosomes.

351  LAAT-1 Is the Lysosomal Lysine/Arginine  
Transporter That Maintains Amino Acid  
Homeostasis  
B. Liu et al.  
A lysosomal membrane protein identified  
in nematodes can explain how cysteamine  
alleviates a lysosomal storage disease.

355  Deformations Within Moving Kinetochores  
Reveal Different Sites of Active and  
Passive Force Generation  
S. Dumont et al.  
Distinct active, force-generating and passive,  
frictional interactions with microtubules allow  
processive chromosome movement.

358  Regional Astrocyte Allocation Regulates  
CNS Synaptogenesis and Repair  
H.-H. Tsai et al.  
In the mouse brain, astrocytes are not as  
interchangeable as previously thought.

362  High-Resolution Protein Structure  
Determination by Serial Femtosecond  
Crystallography  
S. Boutet et al.  
A powerful x-ray laser source can probe  
proteins in detail using much smaller  
crystals than previously required.
