A hexabenzocoronene molecule (diameter: 1.4 nanometers) imaged by noncontact atomic force microscopy using a microscope tip terminated with a single carbon monoxide molecule. The carbon-carbon bonds in the imaged molecule appear with different contrast and apparent lengths. Based on these disparities, the bond orders and lengths of the individual bonds can be distinguished. See page 1326.

REPORTS
1314  Octet-Line Node Structure of Superconducting Order Parameter
      in KFe$_2$As$_2$
      K. Okazaki et al.
      Laser-based photoemission spectroscopy is used to map out the pairing gap of an
      iron-based superconductor.

1318  Relaxation and Prethermalization
      in an Isolated Quantum System
      M. Gring et al.
      Two halves of a split ultracold gas of rubidium atoms retain memory of the
      initial state for an extended time.

1322  Oxidative Aliphatic C-H Fluorination
      with Fluoride Ion Catalyzed by a Manganese Porphyrin
      W. Liu et al.
      A catalyst introduces fluorine in a convenient, mild fashion to a range of relatively inert
      hydrocarbons.

1326  Bond-Order Discrimination
      by Atomic Force Microscopy
      L. Gross et al.
      Images detected with an atomic force microscopy tip decorated with a carbon
      monoxide molecule could distinguish Pauling bond order.
      >> Perspective p. 1305

1330  Glacier Extent During the Younger Dryas and 8.2-ka Event on Baffin Island,
      Arctic Canada
      N. E. Young et al.
      Cooling during the event that occurred 8.2 thousand years ago was less extreme
      but more evenly distributed across the seasons than during the Younger Dryas.

1333  Initiation of Cell Wall Pattern
      by a Rho- and Microtubule-Driven Symmetry Breaking
      Y. Oda and H. Fukuda
      A Rho guanosine triphosphatase–based regulatory mechanism reveals how plants
      remodel membranes and cell walls to produce various cell shapes.

1336  A Killer-Protector System Regulates Both
      Hybrid Sterility and Segregation Distortion
      in Rice
      J. Yang et al.
      A genetic locus containing three protein-coding genes underlies the system causing hybrid
      sterility among rice species.

1340  Single Reconstituted Neuronal SNARE Complexes Zipper in Three Distinct Stages
      Y. Gao et al.
      Zippering of a single SNARE complex generates high force and energy that can
      potentially drive synaptic membrane fusion.
      >> Perspective p. 1300

1343  Highly Conserved Protective Epitopes
      on Influenza B Viruses
      C. Dreyfus et al.
      Three broadly neutralizing human monoclonal antibodies protect mice against influenza B.

1348  Structural Probing of a Protein Phosphatase 2A Network by Chemical
      Cross-Linking and Mass Spectrometry
      F. Herzog et al.
      Spatial restraints revealed by chemical cross-linking and mass spectrometry elucidate
      the topology of a dynamic signaling network.

1353  Global Gene Deletion Analysis Exploring
      Yeast Filamentous Growth
      O. Ryan et al.
      Yeast genes involved in the dimorphic switch between cell budding and filamentous growth
      types are identified.

1357  A Critical Period for Social Experience–Dependent Oligodendrocyte
      Maturation and Myelination
      M. Makinodan et al.
      In mice, early social experience regulates prefrontal cortex myelination that is essential
      for normal cognitive development.

1360  Active DNA Demethylation in Plant Companion Cells Reinforces Transposon
      Methylation in Gametes
      C. A. Ibarra et al.
      Activation of transposable elements in the companion cells of plant gametes can silence
      transposable elements in the gamete.
