

Dr. Arko Ghosh, Branco Weiss fellow since 2010, explores how mental processes and motor behavior can be influenced by sensory information from the body.

Know what science will look like tomorrow?

Apply today.

The magnitude of the challenges we face today requires people with fresh thinking and novel approaches. To help find new ways forward, Society in Science – The Branco Weiss Fellowship gives extraordinary postdocs and engineers a generous grant to pursue an unconventional project for up to five years anywhere in the world. Have an idea that could change tomorrow? Get in touch with us today!

MiSeq® Next-generation sequencing for all you seek.

You want amazing accuracy and performance on your benchtop. Illumina delivers—yet again. The MiSeq personal sequencer is the only fully integrated, truly end-to-end benchtop solution around. It's just one more example of why Illumina solutions generate a remarkable 90% of all the world's sequencing data. Discover what's possible.

THE SECOND HOTTEST TOOL IN CHEMISTRY?

If you think Bunsen burners are hot, get to know SciFinder[®], the world's hottest chemical information research product. Used by top scientists, SciFinder is the only tool that provides access to the most comprehensive and trustworthy chemistry-related content. And that's why SciFinder is the choice for chemistry research.[™]

CHIRAL MEDIA

Lux Cellulose-1 and -2 are unique and complementary chiral stationary phases, which are now available in a 10 μm particle size for batch preparative chromatography. The two cellulose-based phases add to a dependable, high-resolution screening set with a wide range of selectivity. The new 10 μm particles are available both in Axia-packed preparative columns, and in bulk, enabling customers to pack their own columns. Lux chiral phases Cellulose-1, -2, -3, and -4 are already offered in 20 μm bulk media for use in batch preparative and simulated moving bed chromatography. Packing columns with new 10 μm particles delivers increased efficiencies by enabling the use of shorter columns without compromising results. Lux Cellulose phases benefit from Phenomenex's unique manufacturing process and silica coating technology. Lux Cellulose-1 uses cellulose tris (3, 5-dimethylphenylcarbamate) as the chiral selector. Lux Cellulose-2 provides a second chiral selector, cellulose tris (3-chloro-4-methylphenylcarbamate), providing a unique chlorinated stationary phase with complementary selectivity to Lux Cellulose-1.

DNA CLONING AND ASSEMBLY KITS

GeneArt Seamless PLUS Cloning and Assembly Kits use a proprietary enzyme mix to recognize and precisely assemble DNA fragments without the need for restriction digestion, ligation, or introduction of extra DNA sequence (seamless). The kits are designed to work with any vector a researcher chooses plus one to four fragments (or more depending on fragment sizes and workflow) in an *in vitro*, typically ≤ 30 minute room temperature reaction to create constructs up to 40 kb in size. The GeneArt Seamless Cloning and Assembly Enzyme Mix is the economical choice for creating constructs up to 13 kb with the option for high throughput assembly. The GeneArt Site-Directed Mutagenesis PLUS System can be employed to introduce deletions, insertions, and substitutions ranging from small to large fragment sizes and can facilitate single or multisite mutagenesis. Up to three sites can be edited in a single plasmid at greater than 90% efficiency.

UV CROSSLINKER

A high-quality, inexpensive ultraviolet crosslinker that makes it possible to identify and analyze trace amounts of DNA/RNA with far greater sensitivity, accuracy, and speed than with conventional analysis. The Select XLE-Series UV crosslinker covalently binds nucleic acids to membranes in under 30 seconds—240 times faster than vacuum-oven baking. It has a unique true-ultraviolet (UV)-monitoring circuitry that safeguards valuable test results from washouts, even when the tubes age. Researchers also rely on this versatile instrument for eliminating polymerase chain reaction contamination, nicking ethidium-bromide-stained DNA in agarose gels, gene mapping for creating cleavage-inhibiting thymine dimers, RecA mutation screening in *E. coli*, UV sterilization, and miscellaneous UV-dosage applications. The Select Series crosslinker features a “smart” user-friendly, fully programmable microprocessor, built-in “help” messages, and an auto-repeat function that make its operation amazingly fast and simple. It features five 8-watt tubes and is available in a choice of 254 nm, 312 nm, and 365 nm versions.

MODULAR CHROMATOGRAPHY SYSTEM

The ÄKTA pure is a chromatography system for flexible, reliable, and intuitive purification of proteins. ÄKTA pure is an easy-to-use modular system that offers the flexibility to support both routine and challenging purification requirements, as well as being adaptable to changing research needs. In today's research environment, scientists are often expected to undertake all aspects of the protein discovery workflow, from genomics to purification and characterization, and the requirement to isolate specific proteins at high purity in short timelines makes chromatography conditions and methodologies more challenging. ÄKTA pure is specifically designed to enable researchers—from beginners to experts—to easily isolate their target protein, whether under simple or complex conditions. ÄKTA pure eliminates the need for programming skills to control the chromatography run, with the addition of simple drag-and-drop method templates in the UNICORN 6 control software.

C-MOUNT SPECTROMETERS

A new series of adapters simplify the integration of c-mount CMOS and CCD cameras with McPherson high-performance spectrometers. Easy and secure c-mount adapters are suitable for cryogenic, TE-cooled, deep depletion, near infrared InGaAs, and sensitive Silicon visible range cameras. They fasten via one-inch, 32-pitch screw thread with 17.526 mm back distance to focal plane. C-mount adapters are widely used for many types of digital cameras. Two dimensional detectors like digital cameras are essential for techniques like spectral imaging and multi-fiber spectroscopy. The new McPherson adapters have a nested design to accommodate the threaded, rotating c-mount. The new adapters allow mounting c-mount detectors firmly, precisely, and in the correct rotational orientation on spectrometers to intercept well focused spectra at the focal plane. A micrometer inside the spectrometer—not a wiggly draw tube—allows precise and reproducible focus trimming (if required). The adapters are available as optional accessories for all new and legacy McPherson instruments.

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information.

Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by *Science* or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.

Announcing our new partnership with NASA Federal Credit Union

Dear Member:

AAAS is committed to offering you member benefits that fit your needs and make your membership more valuable.

With that in mind AAAS is embarking on a new partnership with NASA Federal Credit Union that will provide you with access to a wide range of financial tools and products. Like AAAS, NASA Federal Credit Union is dedicated to serving the scientific community. This shared perspective is just one of the many reasons that we are embarking on this partnership.

As you may know, we have recently ended our banking relationship with Bank of America, but we're confident that our new partnership with NASA FCU will provide you with a superior banking experience. NASA FCU offers members better ways to save and smarter ways to borrow with friendly, professional service – along with anytime, anywhere account access.

Moreover, unlike other financial institutions that have public stockholders, NASA FCU is a not-for-profit financial cooperative where being a member means being an owner, too. And as a member/owner, you will enjoy unique benefits like: better loan rates, higher dividends and state-of-the-art products and services.

We'll be sending you more information about this great new benefit over the coming months. In the meantime, be sure to visit nasafcu.com/AAASpackage to apply for the new AAAS Platinum Advantage Rewards or Platinum Cash Rewards credit cards. You can also take a sneak peek at the AAAS Check Card and Checks coming soon.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Ian King'.
