Feature: Mussels Get a Helping Hand

The cover photograph shows a nearly buried mussels mound, with a helping hand extending from above to assist the mussels. The mussels are depicted as being in a natural, underwater setting, possibly a coastal or estuarine environment. The photograph captures the essence of environmental conservation, with the human hand symbolizing intervention or assistance. The mussels themselves appear to be partially Buried, indicating a natural state where the mussels are integrated into their aquatic habitat.

“Nearly Buried, Mussels Get a Helping Hand
The Evolutionary Allure of Mussels”

This image illustrates the evolutionary allure of mussels, highlighting their natural camouflage and the role of human intervention in their conservation.

**EDITORIAL:** Regenerative Engineering

CT. Laurencin and Y. Khan

The future of tissue regeneration lies in "regenerative engineering," with biomaterials playing a key role.

**COMMENTARY:** What Is the Greatest Regulatory Challenge in the Translation of Biomaterials to the Clinic?

G. D. Prestwich et al.

Leaders in the field list the greatest barriers to biomaterials translation.

**PERSPECTIVE:** Tools for Building Vascular Networks

H. Bae et al.

Advances in generating vascular networks in biomaterials may aid translation of tissue engineering technologies.

**PERSPECTIVE:** Dynamic Environments—The Fourth Dimension

M. W. Tibbetts and K. S. Anseth

Four-dimensional cell matrices will aid in the translation of cell-based therapies.

**REVIEW:** Engineering Complex Tissues

A. Atala et al.

Advances in tissue engineering technologies will enable regeneration of complex tissues and organs.

**REVIEW:** Designing Regenerative Biomaterial Therapies for the Clinic

E.T. Pashuck and M. M. Stevens

Research, regulatory, and clinical aspects are considered for biomaterial translation.
