COVER
End-on view of the atomic model of the bacterial actinlike ParM protein double-helical filament, generated from an electron microscopic reconstruction. A bipolar spindle of antiparallel ParM filaments pushes plasmids to the cell poles, constituting the simplest known apparatus for the segregation of genetic information. The loops on the outside of the 8- to 9-nanometer-thick filaments are involved in spindle formation. See page 1334.

BREVIA

1307  Drought in Africa Caused Delayed Arrival of European Songbirds
A. P. Tøttrup et al.
A severe drought in the Horn of Africa delayed the spring arrival in Europe of two migratory species.

REPORTS

1314  Binary Millisecond Pulsar Discovery via Gamma-Ray Pulsations
H. J. Pietsch et al.
A computer-intensive search revealed gamma-ray pulsations from an exotic binary star system in data from the Fermi Telescope.

1317  Mapping Local Charge Recombination Heterogeneity by Multidimensional Nanospectroscopic Imaging
W. Boo et al.
A near-field optical probe designed to maximize its own signal enhancement can be used to image nonmetallic samples.

1321  Robust Photogeneration of H₂ in Water Using Semiconductor Nanocrystals and a Nickel Catalyst
Z. Han et al.
A photoreduction system combining nanoparticulate light absorbers with a soluble molecular catalyst proves stable for weeks.

1324  Taming of Fluoroform: Direct Nucleophilic Trifluoromethylation of Si, B, S, and C Centers
G. K. S. Prakash et al.
Proper choice of base and solvent renders fluoroform a useful reagent to introduce trifluoromethyl groups into a range of compounds.

1330  Phase Transformations and Metallization of Magnesium Oxide at High Pressure and Temperature
R. S. McWilliams et al.
Mantle minerals conductive at the high pressures and temperatures of planetary interiors could induce a magnetic field.

1334  A Bipolar Spindle of Antiparallel ParM Filaments Drives Bacterial Plasmid Segregation
P. Gayathri et al.
A bipolar spindle, formed by antiparallel actinlike filaments, pushes sister plasmids apart.

1337  Kinetic Responses of β-Catenin Specify the Sites of Wnt Control
A. R. Hernández et al.
Reducing the rate of phosphorylation of β-catenin leads to an increase in the steady-state level of the unmodified form.

1340  Tuning the Electronic Absorption of Protein-Embedded All-trans-Retinal
W. Wang et al.
Opsin-based light absorption was tuned over a 200-nanometer range by rationally engineering retinal-binding protein.

1344  Identity and Function of a Large Gene Network Underlying Mutagenic Repair of DNA Breaks
A. A. M. Al Mamun et al.
The complete set of proteins required for a mutagenic DNA-repair pathway is defined in Escherichia coli.

1348  Platelet Factor 4 and Duffy Antigen Required for Platelet Killing of Plasmodium falciparum
B. J. McMorran et al.
Interaction of a platelet protein and a red cell protein enables platelets to attack malarial parasites inside red cells.

1352  Developmental Progression to Infectivity in Trypanosoma brucei Triggered by an RNA-Binding Protein
N. G. Kolev et al.
The developmental stages of the sleeping sickness parasite can now be observed without the tsetse fly.

1353  Acute Inflammation Initiates the Regenerative Response in the Adult Zebrafish Brain
N. Kyritsis et al.
An inflammatory response to traumatic injury promotes neurogenesis and repair in the zebrafish brain.

1357  Sexually Dimorphic BDNF Signaling Directs Sensory Innervation of the Mammary Gland
Y. Liu et al.
Androgen-driven changes in receptor expression disrupt a neuronal signaling pathway and de-innervation.

1360  Mice Lacking a Myc Enhancer That Includes Human SNP rs6983267 Are Resistant to Intestinal Tumors
I. K. Sur et al.
A human genetic variant, identified in genome-wide association studies as increasing cancer risk, alters tumorigenesis in mice.

1363  Evolution of an MCM Complex in Flies That Promotes Meiotic Crossovers by Blocking BLM Helicase
K. P. Kohl et al.
Minichromosome maintenance proteins have been co-opted to make meiotic recombination safe in flies.
