COVER
Reconstruction of a ~2-million-year-old Australopithecus sediba skeleton (height: ~1.3 meters) based on fossils from the Malapa Hominin 1 (MH1), MH2, and MH4 specimens from Malapa, Gauteng, South Africa. Brown indicates discovered fossils. Au. sediba exhibits a mosaic morphology distinct from that of other australopiths and early Homo. See pages 132 and 163, as well as www.sciencemag.org/extra/sediba.
