REPORTS

144 Search for the Exit: Voyager 1 at Heliosphere’s Border with the Galaxy
S. M. Krimmig et al.

147 Magnetic Field Observations as Voyager 1 Entered the Heliosheath Depletion Region
L. F. Burlaga et al.

150 Voyager 1 Observes Low-Energy Galactic Cosmic Rays in a Region Depleted of Heliospheric Ions
E. C. Stone et al.
The Voyager 1 spacecraft entered an unexpected region of the heliosphere at the boundary with interstellar space.

154 One-Step Assembly of Coordination Complexes for Versatile Film
and Particle Engineering
H. Ejima et al.

157 Nanoscale Atoms in Solid-State Chemistry
X. Roy et al.

159 Inorganic clusters combine with C₆₀ to form layers and three-dimensional ionic materials through charge transfer.

159 Enhanced Remote Earthquake Triggering
at Fluid-Injection Sites in the Midwestern United States
N. J. van der Elst et al.

160 Fossil Musculature of the Most Primitive Jawed Vertebrates
K. Trinajstic et al.

164 Structural Basis for the Counter-Transport Mechanism of a H⁺/Ca²⁺ Exchanger
T. Nishizawa et al.

168 Membrane proteins that exchange calcium ions for cations regulate access by sliding their helices around the ions.

172 Crystal Structure of NLRC4 Reveals Its Autoinhibition Mechanism
Z. Hu et al.

175 Biosynthesis of Antinutritional Alkaloids in Solanaceous Crops Is Mediated by Clustered Genes
M. Itkin et al.

179 Some of the chemicals that domestication has reduced in potato and tomato are derived from clusters of biosynthetic genes.

183 Infectivity, Transmission, and Pathology of Human-Isolated H7N9 Influenza Virus in Ferrets and Pigs
H. Zhu et al.

186 Mg²⁺ Regulates Cytotoxic Functions of NK and CD8 T Cells in Chronic EBV Infection Through NKG2D
B. Chainge-Delalande et al.

188 Magnesium supplementation in patients with a primary immunodeficiency restores immune responses to Epstein-Barr virus.

191 Microcircuits for Hierarchical Elaboration of Object Coding Across Primate Temporal Areas
T. Hirabayashi et al.

Neuronal activity representing novel features emerges in hierarchically lower brain areas earlier than previously thought.
