611 Real-Space Identification of Intermolecular Bonding with Atomic Force Microscopy J. Zhang et al. An atomic force microscope tip bearing a single carbon monoxide molecule was used to resolve hydrogen bonding contacts between molecules.

614 One-Dimensional Electrical Contact to a Two-Dimensional Material L. Wang et al. Metal contacts to graphene along its edge improve bonding and, in turn, electronic performance.

617 Pacific Ocean Heat Content During the Past 10,000 Years Y. Rosenthal et al. Marine records show how ocean heat content has varied in step with climate over the past 10,000 years.

621 Reconstructing the Microbial Diversity and Function of Pre-Agricultural Tallgrass Prairie Soils in the United States N. Fierer et al. Analysis of microbiota in prairie soil relicts offers insights into the ecological function of a near-extinct biome.

624 Structural Basis for flg22-Induced Activation of the Arabidopsis FLS2-BAK1 Immune Complex Y. Sun et al. The molecular basis for how a plant heterodimeric receptor responds to bacterial infection signals is elucidated.

628 Regulation of Temperature-Responsive Flowering by MADS-Box Transcription Factor Repressors J. H. Lee et al. A warm spring favors early flowering by invoking less transcriptional repression by a floral repressor complex.

632 Mosaic Copy Number Variation in Human Neurons M. J. McConnell et al. Single-cell genomics reveals that individual adult human neurons acquire diverse individual genomes.

637 Resident Neural Stem Cells Restrict Tissue Damage and Neuronal Loss After Spinal Cord Injury in Mice H. Sabelström et al. Glial scarring helps to maintain the integrity of the injured spinal cord in mice.
