COVER
Eroded landscape of Yellowknife Bay, Gale crater on Mars. Sheepbed mudstone is seen in the foreground, ~ 4 meters distant from the Curiosity rover camera that took the photo; Gillespie sandstone is in the middle field. The foothills of Mt. Sharp (upper left), ~ 20 kilometers distant, are Curiosity’s ultimate destination. Exploration of this region by the Curiosity rover offers evidence of an ancient, potentially habitable environment. See the special section beginning on page 386 and at www.sciencemag.org/extra/curiosity.

>> Report p. 428

Increased Dust Deposition in the Pacific Southern Ocean During Glacial Periods
F. Lamy et al.
A million-year-long marine sedimentary record of dust supply to the Pacific Southern Ocean reflects global climate.

A Peptide Hormone and Its Receptor Protein Kinase Regulate Plant Cell Expansion
M. Haruta et al.
A signaling system important in the regulation of plant cell size during development is identified.

A Different Form of Color Vision in Mantis Shrimp
H. H. Thoen et al.
Stomatopods use multiple photoreceptors to allow rapid color recognition rather than color discrimination.
>> Perspective p. 381

Riskier Ripples Allow Bats and Frogs to Eavesdrop on a Multisensory Sexual Display
W. Halfwerk et al.
Calling frogs incidentally produce water ripples that are targeted by rival males and frog-eating bats.

Endothelial Cell-Derived Angiopoietin-2 Controls Liver Regeneration as a Spatiotemporal Rheostat
J. Hu et al.
Endothelial cells control liver regeneration through paracrine hepatotrophic and autocrine endotheliotropic mechanisms.

Single β-Actin mRNA Detection in Neurons Reveals a Mechanism for Regulating Its Translatability
A. R. Buxbaum et al.
Imaging of β-actin messenger RNA (mRNA) in neurons reveals transient alteration of mRNA availability during synaptic plasticity.

Visualization of Dynamics of Single Endogenous mRNA Labeled in Live Mouse
H. Y. Park et al.
A transgenic mouse with fluorescently labeled endogenous β-actin mRNA permits single-molecule analysis in live cells.

The HydG Enzyme Generates an Fe(CO)₂(CN) Synthon in Assembly of the FeFe Hydrogenase H-Cluster
J. M. Kuchenreuther et al.
Vibrational spectroscopy traces the origin of carbon monoxide and cyanide ligands in the active site of di-iron hydrogenase enzymes.
>> Perspective p. 378

IFI16 DNA Sensor Is Required for Death of Lymphoid CD4 T Cells Abnormally Infected with HIV
K. M. Monroe et al.
The intracellular sensor that triggers the death of human lymphoid CD4 T cells abnormally infected with HIV is identified.
>> Perspective p. 383

Adaptation of Innate Lymphoid Cells to a Micronutrient Deficiency Promotes Type 2 Barrier Immunity
S. P. Spencer et al.
Vitamin A deficiency alters the balance of innate immune cells in the gut, promoting resistance to nematode infection.

Transmissible Dog Cancer Genome Reveals the Origin and History of an Ancient Cell Lineage
E. P. Murchison et al.
An unusual tumor in dogs arose more than 10,000 years ago, and despite a huge mutational burden, its genome has remained stable.
