RESEARCH ARTICLES
55  Total Synthesis of a Functional Designer Eukaryotic Chromosome
    N. Annaluru et al.
A synthetic version of yeast chromosome III with every gene tagged can substitute for the original.

58  Geophysical and Geochemical Evidence for Deep Temperature Variations Beneath
    Mid-Ocean Ridges
    C. A. Dalton et al.
Temperature variations in the upper mantle drive mantle convection.

70  Soft Microfluidic Assemblies of Sensors, Circuits, and Radios for the Skin
    S. Xu et al.
Flexible skin-integrated electronic sensors enable continuous, wireless health monitoring.

78  The Gravity Field and Interior Structure of Enceladus
    L. Iess et al.
The saturnian moon is differentiated and likely hosts a regional subsurface sea at its southern pole.

84  A 12-Million-Year Temperature History of the Tropical Pacific Ocean
    Y. G. Zhang et al.
A strong Pacific zonal surface ocean temperature gradient has existed for the past 12 million years.

87  Construction of a Vertebrate Embryo from Two Opposing Morphogen Gradients
    P. F. Xu et al.
Opposing gradients of bone morphogenetic protein and Nodal can induce the formation of a zebrafish embryo.

90  Monolignol Ferulate Transferase Introduces Chemically Labile Linkages into the Lignin Backbone
    C. G. Wilkerson et al.
Engineered poplar lignin with readily cleavable ester bonds in the polymer backbone improves wood degradability.

97  Neuronal Control of Drosophila Walking Direction
    S. S. Bidaye et al.
Activation of descending command neurons in Drosophila induces flies to walk backward.

101 SRP RNA Remodeling by SRP68 Explains Its Role in Protein Translocation
    J. T. Grotwinkel et al.
Structures of part of the signal recognition complex help explain how newly synthesized proteins are inserted into membranes.

REPORTS
70  Soft Microfluidic Assemblies of Sensors, Circuits, and Radios for the Skin
    S. Xu et al.
Flexible skin-integrated electronic sensors enable continuous, wireless health monitoring.

75  A Simple Complex on the Verge of Breakdown: Isolation of the Elusive
    Cyanofomate Ion
    L. J. Murphy et al.
Characterization of a cyanide–carbon dioxide adduct bolsters its possible role in protecting a plant enzyme from cyanide inhibition.

80  Geophysical and Geochemical Evidence for Deep Temperature Variations Beneath
    Mid-Ocean Ridges
    C. A. Dalton et al.
Temperature variations in the upper mantle drive mantle convection.

84  A 12-Million-Year Temperature History of the Tropical Pacific Ocean
    Y. G. Zhang et al.
A strong Pacific zonal surface ocean temperature gradient has existed for the past 12 million years.

87  Construction of a Vertebrate Embryo from Two Opposing Morphogen Gradients
    P. F. Xu et al.
Opposing gradients of bone morphogenetic protein and Nodal can induce the formation of a zebrafish embryo.

90  Monolignol Ferulate Transferase Introduces Chemically Labile Linkages into the Lignin Backbone
    C. G. Wilkerson et al.
Engineered poplar lignin with readily cleavable ester bonds in the polymer backbone improves wood degradability.

97  Neuronal Control of Drosophila Walking Direction
    S. S. Bidaye et al.
Activation of descending command neurons in Drosophila induces flies to walk backward.

101 SRP RNA Remodeling by SRP68 Explains Its Role in Protein Translocation
    J. T. Grotwinkel et al.
Structures of part of the signal recognition complex help explain how newly synthesized proteins are inserted into membranes.
