How hepatitis C replicates its genome

715 & 771

INSIGHTS

712 BUILT FOR TOUGH CONDITIONS
High-resolution structural data help to explain the mechanical properties of rodent teeth By Y. Politi and J. C. Weaver
REPORT P. 746

713 Tying up a transcription factor
A bivalent small molecule inhibits the activity of a rogue transcription factor in leukemia By A. Chen and A. N. Koehler
REPORT P. 779

715 Kickstarting a viral RNA polymerase
Hepatitis C virus RNA–dependent RNA polymerase primes synthesis of its RNA genome with an inbuilt proteinaceous primer By S. Bressanelli
REPORT P. 771

716 Breaking the intestinal barrier to deliver drugs
The structure of a tight junction protein bound to a disruptive toxin may guide drug delivery strategies By P. Artursson and S. D. Knight
REPORT P. 775

718 Just add water dimers
Fast reaction with water dimers may limit the impact of the simplest Criegee intermediate on atmospheric chemistry By M. Okumura
REPORT P. 751

719 Harnessing weak interactions for enantioselective catalysis
The traditional tools of physical organic chemistry benefit from modern data analysis techniques By T. Lu and S. E. Wheeler
REPORT P. 737

720 Randomize evaluations to improve health care delivery
Administrative data and experimental designs lead the way By A. Finkelstein and S. Taubman

724 Plant behaviour and intelligence
By A. Trewavas, reviewed by A. G. Zink and Z.-H. He

725 The man who touched his own heart
By R. Dunn, reviewed by Y. Nusinovich

LETTERS

727 Cancer risk: role of environment
By N. A. Ashford et al.

727 Cancer risk: tumors excluded
By J. D. Potter and R. L. Prentice

728 Cancer risk: role of chance overstated
By C. Wild et al.

728 Cancer risk: prevention is crucial
By C. Gotay et al.

728 Cancer risk: many factors contribute
By M. Song and E. L. Giovannucci

729 Cancer risk: accuracy of literature
By M. O’Callaghan

729 Response
By C. Tomasetti and B. Vogelstein
