62 Adoptive cell transfer as personalized immunotherapy for human cancer — S. A. Rosenberg and N. P. Restifo
69 Neoantigens in cancer immunotherapy — T. N. Schumacher and R. D. Schreiber

ON THE COVER
Cancer immunotherapy harnesses the power of the immune system to kill tumors. These therapies aim to activate and expand T cells, such as those shown in blue, to specifically kill tumors (black). Current approaches include antibodies targeting inhibitory proteins on T cells, adoptive T cell therapy, and tumor vaccines, among others. See page 54.
