IN BRIEF
610  Roundup of the week’s news

IN DEPTH
613  HOW BURIED WATER MAKES DIAMONDS AND OIL
A new picture of water in the deep Earth predicts surprising chemistry  By E. Hand

614  MICROBES AND CANCER DRUGS
Gut bacteria boost immunotherapies  By M. Leslie

615  DATA CHECK: HOW A $30 BILLION HIKE BECOMES $3 BILLION
The new 2-year U.S. budget deal is frontloaded, with most of the spending increase coming in 2016  By J. Mervis

616  PACIFIC RIM MATHEMATICIANS COAXED FROM THEIR IVORY TOWERS
Programs to yoke math to industrial needs are booming in the Asia Pacific  By D. Normile

617  INDIA ORDERS PREMIER LABS TO PAY THEIR OWN WAY
“Self-finance” directive comes as government pushes indigenous innovation  By S. Ravindran

618  USING EVOLUTION TO BETTER IDENTIFY CELL TYPES
Gene expression patterns show that apparently related cells can have very different evolutionary histories  By E. Pennisi

FEATUE
620  EGGS UNLIMITED
A company’s fertility treatments spark hope and disbelief  By J. Cousin-Frankel

INSIGHTS
626  DENGUE VACCINES AT A CROSSROAD
Despite modest efficacy, a newly developed vaccine may be key for controlling dengue  By A. Wilder-Smith and D. J. Gubler

628  A PANCREATIC CLOCK TIMES INSULIN RELEASE
Circadian oscillators of beta cells control insulin secretion and glucose homeostasis  By C. Dibner and U. Schibler

629  LOVE AT SECOND SIGHT FOR CO2 AND H2 IN ORGANIC SYNTHESIS
Catalysts can combine H2 and CO2 to create building blocks for high-value products  By J. Klankermayer and W. Leitner

631  FRUSTRATING A QUANTUM MAGNET
Nuclear magnetic resonance reveals the ground state of frustrated magnets  By Y. Furukawa

632  EVIDENCE GAPS AND ETHICAL REVIEW OF MULTICENTER STUDIES
Empirical research is needed to guide federal policy  By A.-M. Ervin et al.

634  THE EPIGENOME—A FAMILY AFFAIR
Epigenome disruptions can be transmitted as altered histone modification patterns in sperm  By J. R. McCarrey

635  HOW TO ISOLATE AMERICIUM
An electrolytic process enables isolation of the radioactive element americium from used nuclear fuel  By C. Soderquist

636  A NEW DAWN FOR CATARACTS
Sterols reverse protein aggregation in an eye lens paradigm  By R. A. Quinlan

BOOKS ET AL.
638  HOLDING FAST TO DREAMS
By F. A. Hrabowski III, reviewed by I. M. Warner and G. Thomas

639  THE EVOLUTION OF EVERYTHING
By M. Ridley, reviewed by R. Gawne

639  SPOOKY ACTION AT A DISTANCE
By G. Musser

LETTERS
640  LIFT NIH RESTRICTIONS ON CHIMERA RESEARCH
By A. Sharma et al.

640  MAKING SENSE OF THE TROUBLES AT NEON
By S. V. Ollinger

641  ONLINE BUZZ: DISASTER PREPAREDNESS

DEPARTMENTS
609  EDITORIAL
Eradicating polio  By Anthony Adams and David M. Salisbury

710  WORKING LIFE
Improving student advising  By Rachel Bernstein
663 MICROBIOME
The ecology of the microbiome: Networks, competition, and stability
K. Z. Coyte et al.
▶ REVIEW P. 649

667 MOVEMENT CONTROL
Corticomotoneuronal cells are “functionally tuned” D. M. Griffin et al.

670 PLANT SCIENCE
Plant pathogenic anaerobic bacteria use aromatic polyketides to access aerobic territory G. Shabuer et al.

674 OPHTHALMOLOGY
Pharmacological chaperone for α-crystallin partially restores transparency in cataract models L. N. Makley et al.
▶ PERSPECTIVE P. 636

678 PROTEIN SYNTHESIS
Operon structure and cotranslational subunit association direct protein assembly in bacteria Y-W. Shieh et al.

680 STRUCTURAL BIOLOGY
Crystal structure of the anion exchanger domain of human erythrocyte band 3 T. Arakawa et al.

684 PLANT EVOLUTION
The Papaver rhoes S determinants confer self-incompatibility to Arabidopsis thaliana in planta Z. Lin et al.

688 PLANT GENETICS
A cucurbit androecy gene reveals how unisexual flowers develop and dioecy emerges A. Boualem et al.

691 NONHUMAN GENOMICS
The Symbiodinium kawagutii genome illuminates dinoflagellate gene expression and coral symbiosis S. Lin et al.

Molecules in a lattice of light

SPECIAL SECTION
MAVEN at Mars

INTRODUCTION
643 MAVEN explores the martian upper atmosphere B. M. Jakosky

RESEARCH ARTICLE ABSTRACTS
MAVEN observations of the response of Mars to an inter-planetary coronal mass ejection B. M. Jakosky et al.
Early MAVEN Deep Dip campaign reveals thermosphere and ionosphere variability S. Bougher et al.
Discovery of diffuse aurora on Mars N. M. Schneider et al.

REPORT ABSTRACT
Dust observations at orbital altitudes surrounding Mars L. Andersson et al.

SEE ALSO
▶ PODCAST

ON THE COVER
Paths of ions escaping Mars’ atmosphere due to solar wind radiation. The energy of the particles is illustrated by a brown-to-white gradient. The most energetic ions (white) create a plume, seen at the top. See page 643. For more on the process behind creating this data visualization, see http://scim.ag/maven-cover. Data visualization: Valerie Altonnian/Science; Data: X. Fang and the MAVEN science team
