What if you could...

- use up to **44% less plastic** for your nucleic acid purification*
- **recycle ALL** of your packaging and plastics
- AND, still recover the same **highly pure** DNA?

Now, you can.
It’s time for change.

Introducing Monarch™ Nucleic Acid Purification Kits

It’s time to transform your DNA purification experience. NEB’s Monarch Nucleic Acid Purification Kits are optimized for maximum performance and minimal environmental impact. With an innovative column design, buffer retention is prevented, eliminating risk of carryover contamination and enabling elution in smaller volumes. The result – highly pure DNA for your downstream applications.

Make the change and migrate to Monarch today.

Optimized design of Monarch Miniprep Columns

- Labeling tab and frosted surface provide convenient writing spaces
- Made with less plastic for reduced environmental impact
- Unique, tapered design eliminates buffer carryover and allows for elution in as little as 30 μl
- Binding capacity up to 20 μg
- Column tip is compatible with vacuum manifolds

Request your free sample at NEBMonarch.com
Wow us with the stunning discoveries and probing insights you can bring to life with data visualization.

MONGOLIA
June 30–July 13, 2016

Explore Mongolia, “Land of the Blue Sky” with Chris Carpenter! See vast landscapes from the Gobi Desert to the granite mountains of Khogno Khan Nat’l. Park. Enjoy the renowned Nadaam Festival in Karakorom, once the capital of the Mongolia Empire, and visit Okhon Valley World Heritage Site. Look for wild horses at Hustai Nat’l. Park. $3,995 + air.

For a detailed brochure, call (800) 252-4910
All prices are per person twin share + air

CALL FOR PAPERS! MANUSCRIPTS DUE MAY 1, 2016.

WE’VE GOT A MATERIAL
INTEREST IN YOU

Publish in our Special Series, Materials By Design. We’ll waive all APCs.
Use code: ADVSSMBD

Science Advances, the new, open-access journal from AAAS, is accepting papers for an exciting Special Series, Materials By Design, that showcases work in material science and engineering with potential global impact.

Gel Documentation System
The HeroDoc Plus is a compact system for imaging gels and blots. The compact darkroom/hood assembly will sit comfortably on any laboratory bench within its small footprint. A unique lift-up hood and a built-in ultraviolet (UV) protection shield enable the user to do preparative work easily and safely. Should the user wish to raise the shield, an automatic cutoff switch will provide protection from any harmful effects of UV light. A high-sensitivity charge-coupled device (CCD) camera combined with a distortion free, software-controlled lens, ensures quality image capture from 10 ms up to 60 minutes. This is more than adequate for most fluorescent gel and blot image capture. Illumination comes from a massive 28 cm x 22 cm filter midrange transilluminator, while built-in white and blue light-emitting diodes (LEDs) provide epi-illumination as standard. Multilanguage, Herostore image capture and control software effortlessly enables the user to acquire images of their gels and blots.

Noise-Free Microscope Camera
With the new Olympus UC90 microscope camera, it is now possible to maximize the information captured from life and materials science samples with ease and simplicity. The UC90 excels in capturing and documenting real-life details, while a 4K ultrahigh definition (UHD) mode supports scientists in overcoming the limitations of the oculars with the many benefits of complete on-screen operation. In-depth sample analysis is achieved without compromise, with the UC90’s 9-megapixel, 1-inch charge-coupled device (CCD) color sensor. This not only provides a large field of view covering nearly all the sample area normally observed through the oculars, but the high resolution in combination with perfect color reproduction also retains the sample’s every detail. Without the need to switch objectives to capture large sample structures, monitor operation is fast and efficient, allowing quick creation of detailed images that are ideal for documentation and accurate retrospective analysis.

Gel Imager
The Imagel Gel Doc system for iPhone or Android is the smart way to quickly grab your gel images. Just hook up your smartphone to the compact hood and start to collect images of all your gels quickly and easily. The Imagel can be used with three different light sources. Use the blue light-emitting diode (LED) transilluminator for DNA applications that use Green DNA, GelGreen, SYBR Green, SYBR Safe, SYBR Gold, and for protein applications using LavaPurple. An ultraviolet transilluminator will let you work with AmberDNA, ethidium bromide, SYBR, Oriloe, fluorescent gel stain, GelRed, SYPRO Ruby, Coomassie, Fluor Orange, and Krypton. Also, using a white light source you can capture images of proteins using Coomassie Blue, copper, silver, or zinc stains. The Imagel is very simple to use. Just snap a photo and save on your phone or upload to the cloud for hosting, sharing, and image analysis and annotation features.

Plant Nucleic Acid Extraction Kit
The GF-1 Plant DNA extraction kit is designed for rapid and efficient purification of genomic DNA from a wide range of plant tissues. The purification is based on the usage of denaturing agents to provide lysis of tissue cells, denaturation of proteins, and the subsequent release of genomic DNA. Special buffers provided in the kit are optimized to enhance binding of DNA onto a specially treated glass filter membrane for efficient recovery of highly pure genomic DNA. The GF-1 will give yields of up to 20 μg of DNA. The genomic DNA is ready to use for routine molecular biology applications such as restriction enzyme digestion, polymerase chain reaction (PCR), Southern blotting, and DNA fingerprinting. Each kit contains buffer, wash buffer, elution buffer, and proteinase K.

Large-Scale Transient Transfection Medium
BalancD Transfectionary CHO is a cell culture medium for rapid, scalable production of recombinant proteins through transient transfection in Chinese hamster ovary (CHO) cells. The new medium is chemically defined, animal component free, and specifically designed to support sustained high growth with increased transfection efficiency that can yield gram-scale protein expression. Transient gene expression (TGE) has evolved into a cost-effective, rapid alternative to stable cell-line engineering for the production of recombinant proteins and antibodies needed for early-stage biopharmaceutical development activities. CHO cells are the most prevalent platform used for commercial production of biopharmaceuticals and are therefore viewed as preferential hosts for TGE. The challenge has been in obtaining protein yield of sufficient quantity and quality, leading many scientists to focus on human embryonic kidney (HEK) 293 cell transfection. The ability to obtain gram-scale yields by transient transfection in CHO cells is a real step forward toward cutting costs and development time for biotherapeutic research.

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/about/new-products-section for more information.

Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by Science or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.
AAAS, publisher of Science, thanks the sponsors and supporters of the 2016 Annual Meeting

EPIGENETICS: DISCOVERY THROUGH VALIDATION

CST antibodies for epigenetic-related targets, including histone modifications, epigenetic regulators, and general transcription factors.

CST antibodies validated for ChIP according to ENCODE* Consortium guidelines.

Validated Tools for Discovery:

» SimpleChIP® Kits to facilitate Chromatin IP from cells and tissue.

» PTMScan® Kits and Services to enable MS-based discovery of methylated and acetylated proteins.

» Most ChIP-validated antibodies approved for additional applications like IHC, Flow, IF and WB.
