Hydride anions moving through oxides

FEATURE

1254 VOYAGE INTO DARKNESS
Researchers are learning that Arctic organisms aren’t dormant during the long polar night
By E. Kintisch

INSIGHTS

PERSPECTIVES

1258 REBOOT GITMO FOR U.S.-CUBA RESEARCH DIPLOMACY
Transform Guantánamo into a peace park and ecological research center
By J. Roman and J. Kraska

1260 SQUEEZING INTO SUPERCONDUCTIVITY
Synchrotron light sources can be used to probe superconductivity at extreme pressures
By V. Struzhkin

1262 LARGE, SOFT, AND POLARIZABLE HYDRIDE IONS SNEAK AROUND IN AN OXYHYDRIDE
A perovskite containing highly electropositive cations conducts hydride anions
By S. Yamaguchi

1264 THE ENIGMATIC TUFT CELL IN IMMUNITY
An intestinal cell stimulates the immune response to parasitic infections
By N. Harris

1266 A RADICALLY UNEXPECTED MECHANISM
Bioconversion of the antibiotic nosiheptide proceeds via unforeseen radical intermediates
By J. Bridwell-Rabb and C. L. Drennan

1267 QUANTUM DYNAMICS IN THE SMALLEST WATER DROPLET
Two hydrogen bonds in a six-molecule water cluster break simultaneously in a concerted set of movements
By D. C. Clary

1268 A SATIATING SIGNAL
A glycosylation enzyme in specific brain neurons is a nutrient sensor that controls body weight
By G. J. Schwartz

BOOKS ET AL.

1270 SCIENCE BLOGGING
C. Wilcox et al., Eds.; reviewed by A. D. Thaler

1271 HALF-EARTH
By E. O. Wilson, reviewed by C. J. Griffiths

LETTERS

1273 A WAVE OF INSPIRATION
By J. McNerney

1273 RISKS OF WOLBACHIA MOSQUITO CONTROL
By E. L. S. Loreto and G. L. Wallau

1273 CURBING IRAN’S ACADEMIC MISCONDUCT
By B. Ataie-Ashtiani

Fine-tuning of a radical-based reaction by radical S-adenosyl-L-methionine tryptophan lyase G. Sicoli et al.

Structural and molecular basis for Ebola virus neutralization by protective human antibodies J. Misasi et al.

Pluto's surface, as seen by the New Horizons spacecraft. At left is the bright white Sputnik Planum, a plain of nitrogen ice. Its numerous surface pits are probably formed by sublimation.

On the right are the dark red highlands of Krun Macula, rising 2.5 kilometers above the plains. To create this image, several exposures of the Long-Range Reconnaissance Imager were combined with color data from the Multispectral Visible Imaging Camera. See pages 1280 to 1293.
