The first global award for stem cells and regenerative medicine

Stem cells and regenerative medicine is the new frontier in life sciences. Boyalife, Science, and Science Translational Medicine jointly establish a global award to recognize and reward scientists in the fields of stem cells and/or regenerative medicine with a focus on developing cell-based treatments for cancer, degenerative disorders, immunotherapy and stem cells transplantation.

The 2016 award ceremony will be held in San Francisco, on 23rd June, 2016.

The winners will receive:
☆ A Grand Prize of $25,000 and a Runner-Up Prize of $5,000 will be awarded.
☆ The Grand Prize Winning Essay will be published in Science; a brief abstract of the Runner-Up Essay will be published in Science.

Learn more about the Prize, visit: www.sciencemag.org/prize/boyalife/rules
All about Biotechnology and Health Improvement

Boyalife Group is an enterprise centered on innovation in the biotechnology field covering stem cell technology and bio-pharm. Founded in 2009, Boyalife Group has more than 30 wholly-owned subsidiaries and holding companies currently, becoming the leading brand in healthcare and pharmaceutical center in China.

Our operative segments all for better health are including:

- Stem Cell Technology
- Regenerative Medicine & Anti-aging
- Cancer Immunotherapy
- Genomics & Precision Medicine
- Healthcare Management
- Cloning Technology
- Innovative Drug Discovery
- Disease Model Research

We are inviting gifted candidates from around the world to join us, we will offer you a dynamic environment to develop work of globe consequence.

Become a member! Contact: career@boyalife.com

Time for change.

Introducing Monarch™ Nucleic Acid Purification Kits

It’s time to transform your DNA purification experience. NEB’s Monarch Nucleic Acid Purification Kits are optimized for maximum performance and minimal environmental impact. With an innovative column design, buffer retention is prevented, eliminating risk of carryover contamination and enabling elution in smaller volumes. The result – highly pure DNA for your downstream applications.

Make the change and migrate to Monarch today.

Optimized design of Monarch Miniprep Columns

- Labeling tab and frosted surface provide convenient writing spaces
- Made with less plastic for reduced environmental impact
- Unique, tapered design eliminates buffer carryover and allows for elution in as little as 30 μl
- Binding capacity up to 20 μg
- Column tip is compatible with vacuum manifolds

Request your free sample at NEBMonarch.com
CALL FOR PAPERS

BROADER IMPACT
B1 Today’s Teaching and Learning in Materials Science—Challenges and Advances
B2 The Business of Materials Technology

BIOMATERIALS AND SOFT MATERIALS
BM1 Spatiotemporally and Morphologically-Controlled Biomaterials for Medical Applications
BM2 Stimuli Responsive Organic and Inorganic Nanomaterials for Biomedical Applications and Biosafety
BM3 Biomaterials for Regenerative Medicine
BM4 Materials and Manufacturing of Biointerfaces Devices and Stretchable Electronics
BM5 Materials for Biointegrated Photonic Systems
BM6 Fabrication, Characterization and Applications of Bioinspired Nanostructured Materials
BM7 Functional Nanostructured Polymers for Emerging Energy Technologies

ELECTROCHEMISTRY
EC1 Redox Activity on the Molecular Level—Fundamental Studies and Applications
EC2 Facilitating Charge Transport in Electrochemical Energy Storage Materials
EC3 Catalytic Materials for Energy and Sustainability
EC4 Material, Devices and Systems for Sustainable Conversion of Solar Energy to Fuels
EC5 Proton Transfer and Transport—From Biological Systems to Energy Applications

ELECTRONICS, MAGNETICS AND PHOTONICS
EM1 Materials Issues for Quantum Computing
EM2 Rare-Earths in Advanced Photonics and Spintronics
EM3 Electronic and Ionic Dynamics at Solid-Liquid Interfaces
EM4 Structure-Property Relationships of Organic Semiconductors
EM5 Materials and Mechanisms of Correlated Electronic Phenomena in Oxide Heterostructures
EM6 Thin-Film Transistors—New Materials and Device Concepts
EM7 Functional Plasmonics
EM8 Spin Dynamics in Nonmagnetic Materials and Devices
EM9 Materials and Nanostructures for Magnetic Skyrmions
EM10 Emerging Materials and Technologies for Nonvolatile Memories
EM12 Diamond Electronics, Sensors and Biotechnology—Fundamentals to Applications

ENERGY AND SUSTAINABILITY
ES1 Materials Science and Chemistry for Grid-Scale Energy Storage
ES2 Materials Challenges for Flow-Based Energy Conversion and Storage
ES3 Perovskite Solar Cell Research from Material Properties to Photovoltaic Function
ES4 Thermoelectric Polymers and Composites—Nontraditional Routes to High Efficiency
ES5 Materials Research and Design for A Nuclear Renaissance
ES6 Scientific Basis for Nuclear Waste Management

MECHANICAL BEHAVIOR AND FAILURE MECHANISMS OF MATERIALS
MB1 Intermetallic-Based Alloys—From Fundamentals to Applications
MB2 Materials under Mechanical Extremes
MB3 High-Entropy Alloys
MB4 Glassy, Nanocrystalline and Other Complex Alloy Systems and Their Applications
MB5 Size Effects and Small-Scale Mechanical Behavior of Materials
MB6 Cyclic Deformation and Fracture at the Nanoscale
MB7 Shear Transformation Mechanisms and Their Effect on Mechanical Behavior of Crystalline Materials

NANOMATERIALS
NM1 Semiconductor Nanowires, Nanoribbons and Heterostructures—Synthesis, Characterizations and Functional Devices
NM2 2D Layers and Heterostructures beyond Graphene—Theory, Preparation, Properties and Devices
NM3 Nanotubes and Related Nanostructures
NM4 Nanomaterials-Based Solar Energy Conversion
NM5 Nanomembrane Materials—From Fabrication to Application
NM6 Nanoscale Materials and Devices by High-Temperature Gas-Phase Processes

PROCESSING AND MANUFACTURING
PM1 Ion Beam-Enabled Nanoscale Fabrication, Modification and Synthesis
PM2 Plasma Processing via Liquid for Life Sciences and Environmental Applications
PM3 Science-Enabled Advances in Materials- and Manufacturing-Technologies
PM4 Novel Materials, Fabrication Routes and Devices for Environmental Monitoring
PM5 Hierarchical, Hybrid and Roll-to-Roll Manufacturing for Device Applications

THEORY, CHARACTERIZATION AND MODELING
TC1 In Silico Materials Chemistry
TC2 Design, Discovery and Understanding of Materials Guided by Theory, Computation and Data Mining
TC3 Materials Issues in Art and Archaeology
TC4 Advances in Spatial, Energy and Time Resolution in Electron Microscopy

Meeting Chairs
Bernard Bewlay, General Electric–Global Research Center
Silvia Gradečak, Massachusetts Institute of Technology
Sarah Heilshorn, Stanford University
Ralph Spolenak, ETH Zürich
T. Venky Venkatesan, National University of Singapore

Don’t Miss These Future MRS Meetings!
2017 MRS Spring Meeting & Exhibit
April 17 – 21, 2017
Phoenix, Arizona

2017 MRS Fall Meeting & Exhibit
November 26 – December 1, 2017
Boston, Massachusetts
Gilead Sciences has spent 25 years working to improve treatments for people living with HIV, with an ultimate goal in mind: finding a cure. To that end, we’ve set aside funding to support academic institutions, nonprofit organizations and community groups committed to HIV cure activities. Visit www.gilead.com/HIV-Cure-FOA to learn more and apply for funding.
Botanical Iceland

Land of Fire & Ice & Nature’s Paradise!
July 2-11, 2016

Outdoors enthusiasts grab your cameras and field guides, and come explore Iceland! Discover Iceland in all of its great natural beauty. Iceland has captured the imagination of people all over the world since Jules Verne wrote the “Journey to the Center of the Earth” in 1871. Iceland has a proud heritage—it is the world’s oldest democracy. Its plant life and the natural wonders are truly magical! This trip is a tremendous introduction to the heritage of Iceland, from geology to history and landscapes with many fascinating plants. $4,295 pp + air.

All prices are per person twin share + air

Science Immunology

Don’t miss the debut of Science Immunology.

NOW ACCEPTING PAPERS

Science is expanding its reach into immunology—now offering the newest online-only, weekly journal in the Science family of publications. Science Immunology will provide original, peer-reviewed research articles that report critical advances in all areas of immunological research.

Be a part of the Science Immunology debut issue publishing Summer 2016!
Submit your manuscript today at ScienceImmunology.org.

Science Immunology
qPCR Assays
The PrimeTime Gene Expression Master Mix is an optimized enzyme mix for probe-based quantitative polymerase chain reaction (qPCR). This newest product enhances the Integrated DNA Technologies (IDT) PrimeTime qPCR product line, as researchers can economically obtain both assays and a master mix that are optimized and validated to work together. PrimeTime qPCR Assays are available with a choice of dyes and quenchers, and the predesigned assays are backed by a performance guarantee. The versatile, stable master mix easily integrates into new and existing experimental workflows, because it is also compatible with all commercially available 5’ nuclease gene expression assays. The PrimeTime qPCR Assays and Master Mix deliver accurate, sensitive gene expression analysis with efficiencies >90% in two-step reverse transcription (RT)-qPCR under both fast and standard cycling conditions. This provides the reproducibility that gives researchers confidence in the quality of their data, whether it be from singleplex or duplex reactions.

HPLC Column
The Thermo Scientific Acclaim AmG C18 high-performance liquid chromatography (HPLC) column is a high-performance, reversed-phase column designed for ion-pairing chromatographic separations and optimized for various aminoglycoside (AmG) antibiotics analyses, including drug purity and impurity characterization and quantification, therapeutic drug monitoring, and residual control testing in different matrices. AmG analysis requires columns that are robust to withstand harsh, low-pH conditions. The new Acclaim AmG C18 columns have been engineered specifically for this application. Our unique silica surface chemistry provides a layer of protection during the separation process and extends column longevity. Thermo Fisher Scientific

XUV Spectrometer
McPherson’s new grazing incidence wavelength dispersive optical spectrometer allows rapid analysis of spectral light in the ~1-nm to 300-nm wavelength region (4 eV to 1,200 eV). In addition to performing high-harmonic laser generation experiments, the Model 248/310 is also useful for measuring ion- or discharge light sources and for astrophysics detector calibration. At FLASH, the free electron laser experiment conducted by DESY in Hamburg, Germany, the McPherson 248/310 ultrahigh vacuum (UHV) model assisted in analysis of the 2.3-nm to 4.4-nm water window (a region transparent to light). Space scientists and plasma physicists who need an instrument for vacuum ultraviolet and extreme ultraviolet (EUV/XUV) capitalize on the 248/310’s range and flexibility. Configured in reverse, it operates as a tunable light source. This is useful for spectral calibration and spectroscopy in the vacuum ultraviolet and the extreme and soft X-ray wavelength region (EUV and SXR respectively). Direct detection charge-coupled devices (CCDs), image intensifiers, microchannel plates, or electron multipliers provide a wide range and flexible detection.

This is useful for spectral calibration and spectroscopy in the vacuum ultraviolet and the extreme and soft X-ray wavelength region (EUV and SXR respectively). Direct detection charge-coupled devices (CCDs), image intensifiers, microchannel plates, or electron multipliers provide a wide range and flexible detection.

Benchtop Workstation
The CleneCab Workstation is a low-cost, benchtop alternative to a cleanroom. For those who wish to create a local cleanroom or safe environment to prevent contamination when working with samples, this is the ideal solution. The CleneCab provides a bench top size environment of 62 x 42 x 77 cm. Constructed from 10-mm acrylic glass, the workstation protects the sample from external contamination and the user from biohazards. It can also be used for other situations in which a high-demand for cleanliness or protection is required, as with radioactive labeling of DNA. Its construction provides ideal shielding from radioactive substances like 32P. Five powerful, timer-controlled ultraviolet (UV) tubes combined with special reflectors efficiently irradiate the entire working surface. The workstation is also equipped with a microprocessor to control the energy of the UV tubes. The UV dose can be preset very easily in energy (mJ) or time units (s).
