FEATU RES

MALARIA WARS
Can malaria be eliminated from the Mekong region before multiple-drug resistance makes it untreatable?

398 By L. Roberts

IN BRIEF

388 News at a glance

IN DEPTH

391 REFUGEE CRISIS BRINGS NEW HEALTH CHALLENGES
Imported pathogens are a much bigger threat to migrants than they are to Europeans

By K. Kupferschmidt

392 HOW SIGN LANGUAGES EVOLVE
Young sign languages develop in predictable ways, offering clues to language evolution

By C. Matacic

393 NO DEADLINE, FEWER REQUESTS
National Science Foundation trial spurs drop in proposals

By E. Hand

394 TEMPLETON GRANT FUNDS EVOLUTION RETHINK
$8.7 million to test controversial ideas about how organisms influence their evolution

By E. Pennisi

395 THE TINIEST TITAN
Fossil shows that even the youngest titanosaurines were ready to take on the world

By P. Monahan

396 DATA CHECK: WHEN THE PAYOFF FOR ACADEMICS DROPS, COMMERCIALIZATION SUFFERS
A change in Norway's laws leads to sharp drop in the number of patents and startups by academics

By J. Mervis

397 CADAVER STUDY CHALLENGES BRAIN STIMULATION METHODS
Unusual test of transcranial stimulation shows that little electrical current penetrates the skull

By E. Underwood

ON THE COVER

Migrant workers such as this man, one of nearly 50 workers employed at a farm in Palin, Cambodia, near the border with Thailand, are at especially high risk of contracting malaria. Reaching them is one of many challenges facing an ambitious new effort to wipe out all malaria from the Greater Mekong subregion by 2030. See page 398. Photo: Jeffrey Lau

397 CADAVER STUDY CHALLENGES BRAIN STIMULATION METHODS
Unusual test of transcranial stimulation shows that little electrical current penetrates the skull
