Too young to win a prize in Stockholm this December?

We don’t think so.
Don’t miss the debut of Science Immunology.

Science is expanding its reach into immunology—now offering the newest online-only, weekly journal in the Science family of publications. Science Immunology will provide original, peer-reviewed research articles that report critical advances in all areas of immunological research, including studies that provide insight into the human immune response in health and disease.

Be a part of the Science Immunology debut issue publishing Summer 2016!

Submit your manuscript today at ScienceImmunology.org.

Eppendorf & Science Prize for Neurobiology
The annual Eppendorf & Science Prize for Neurobiology is an international award which honors young scientists for their outstanding contributions to neurobiological research based on methods of molecular and cell biology. The winner and finalists are selected by a committee of independent scientists, chaired by Science’s Senior Editor, Dr. Peter Stern. Researchers who are not older than 35 years are invited to apply.

You could be next to win this prize and to receive
> Prize money of US$25,000
> Publication of your work in Science
> Full support to attend the Prize Ceremony held in conjunction with the Annual Meeting of the Society for Neuroscience in the USA
> An invitation to visit Eppendorf in Hamburg, Germany

It’s easy to apply!

WILL YOUR RESEARCH LEAD TO BETTER LIVES FOR PATIENTS?

myIDP: A career plan customized for you, by you.

Visit the website and start planning today!
myIDP.sciencecareers.org

Features in myIDP include:

- Exercises to help you examine your skills, interests, and values.
- A list of 20 scientific career paths with a prediction of which ones best fit your skills and interests.
- A tool for setting strategic goals for the coming year, with optional reminders to keep you on track.
- Articles and resources to guide you through the process.
- Options to save materials online and print them for further review and discussion.
- Ability to select which portion of your IDP you wish to share with advisors, mentors, or others.
- A certificate of completion for users that finish myIDP.

Visit the website and start planning today!

Recommended by leading professional societies and the NIH
Science Robotics is a unique journal created to help advance the research and development of robotics for all environments. *Science Robotics* will provide a much-needed central forum to share the latest technological discoveries and to discuss the field’s critical issues.

Join in the excitement for the Fall 2016 debut!
Next-Generation Sequencing Control
The Archer SureShot Triple (ALK, RET, ROS1) Fusion-Positive Control has recently been launched to benchmark greater confidence in gene fusion detection using Archer FusionPlex Panels. The reference control is comprised of formalin-fixed paraffin-embedded (FFPE) curls of homogenously mixed, precisely defined cell lines that contain EML4-ALK, CCDC6-RET, and SLC34A2-ROS1 fusions. When used alongside FusionPlex Panels that contain ALK, RET, or ROS1 fusions, the SureShot controls are a powerful measure of extraction, library preparation, sequencing, and panel performance. SureShot Negative Controls are also available, containing 100% wild-type cells that carry no target-gene fusion.

Genotyping Solution
The Eureka Genotyping Solution is a new, targeted genotyping-by-sequencing (GBS) solution that delivers high-throughput sample processing with low cost per sample. This result is enabled by an innovative, multiplexed combination of allele- and sample-specific barcodes that support high sampleplexing on a sequencer while delivering high-quality single nucleotide polymorphism (SNP) analysis. The Eureka genotyping assay overcomes the challenges associated with current GBS technologies, which are susceptible to variability in genomic reads and missing SNP information, high cost, and complex informatics analysis. Customers can access the Eureka genotyping assay as a service provided by Affymetrix Research Services Laboratory or as a kit-based product to run in their own facility. Complementing the Eureka genotyping offerings, the new 24-sample configuration on the high-density Axiom 96 platform can interrogate upward of 800,000 markers, while the new 96-sample configuration on the Axiom 384 HT platform can assay about 50,000 genetic variants.

Vascular Contrast Agent
BriteVu offers the latest in terminal vascular contrast agents for use with advanced imaging such as micro-computed tomography (micro-CT). BriteVu fills the vascular system down to the capillary level, creating a detailed and highly visible cast. Important features include ease of use, low cost, high radiodensity, and safe ingredients. BriteVu has been successfully used in numerous mammal, reptile, and bird species—even human cadavers—to visualize the entire vascular system and specific organs or regions with incredible detail. Given its complete blood vessel filling, researchers can generate accurate 3D vascular maps for cancer, trauma, stroke, diabetes, malformations, and normal and other disease tissue states using CT. BriteVu can also be used in angiogenesis, drug development, and other studies.

GF-1 Viral Nucleic Acid Extraction Kit
The GF-1 Viral Nucleic Acid Extraction Kit is designed for rapid and efficient purification of viral DNA/RNA from samples such as serum, plasma, body fluid, or virus-infected cell culture supernatant. The purification is based on the usage of denaturing agents to provide efficient cell lysis, denaturation of proteins, and subsequent release of DNA or RNA. Special buffers provided in the kit are optimized to enhance the binding of DNA or RNA onto a specially treated glass filter membrane for efficient recovery of highly pure DNA or RNA. The kits require no organic-based extraction. They are highly pure DNA or RNA, ready to use for routine molecular biology applications such as PCR and reverse transcription PCR.

Gel Analysis Software
The new version of UltraQuant is a further step forward for this very user-friendly gel analysis software. Version 8.31.15 has a number of new and improved functions, making it one of the most convenient gel analysis packages available. UltraQuant is included with all Omega Lum systems, where it works seamlessly alongside the SmartCapture Technology imaging platform. Once an image is captured, UltraQuant can quickly and easily provide a full analysis of the gel or blot using a minimum of steps. Naturally, UltraQuant has a fully automatic mode for the detection of lanes and bands across the gel or blot. Detection sensitivity can be set to an optimum position to achieve the best result. A very effective and easy-to-use edit function gives the user complete control over any lane or band that needs to be added or subtracted.

WHO WILL WIN THE PRIZE

The result will be unveiled in June. The winners will receive:

⭐ A Grand Prize of $25,000 and a Runner-Up Prize of $5,000 will be awarded.
⭐ The Grand Prize Winning Essay will be published in Science; a brief abstract of the Runner-Up Essay will be published in Science.

The 2016 award ceremony will be held in San Francisco, on 23rd June, 2016.

Stem cells and regenerative medicine is the new frontier in life sciences. Boyalife, Science, and Science Translational Medicine jointly establish a global award to recognize and reward scientists in the fields of stem cells and regenerative medicine with a focus on developing cell-based treatments for cancer, degenerative disorders, immunotherapy and stem cells transplantation.
