## ON THE COVER

A woman holds her hand in ice water, one of several techniques used to measure pain tolerance. Typically, healthy people can submerge their

hands for up to 5 minutes. However, for some of those taking opioids, 10 to 15 seconds is the limit, suggesting opioid-induced hypersensitivity to pain. For more on recent developments in pain research, see the special section beginning on page 564. *Photo: Matthew Rakola*
