1363 CIRCULAR RNAS HINT AT NEW REALM OF GENETICS
Mysterious loops of RNA sometimes serve as templates for unexplored proteins
By K. Servick

1364 DEADLY CHEMISTRY
Underground labs in China are devising potent new opioids faster than U.S. and Chinese authorities can respond
By K. McLaughlin

1365 SHREDDING PROTEINS, SENDING SIGNALS?
Nerve cells may communicate with shredded proteins
By M. Leslie

1367 HOW CYANOBACTERIA WENT GREEN
The discovery of a sister group to Cyanobacteria helps to elucidate how oxygen-generating photosynthesis evolved
By R. E. Blankenship
REPORT P. 1436

1368 CAN WE PROTECT ISLAND FLYING FOXES?
Flying foxes play key ecological roles on tropical islands, yet face rising threats
By C. E. Vincenot et al.

1369 BREATHING TO INSPIRE AND AROUSE
A small population of brainstem neurons connects breathing behavior to brain arousal
By S. Sheikhbahaei and J. C. Smith
REPORT P. 1411

1372 HOW CYANOBACTERIA WENT GREEN
The discovery of a sister group to Cyanobacteria helps to elucidate how oxygen-generating photosynthesis evolved
By R. E. Blankenship
REPORT P. 1436

1373 COSTIMULATION, A SURPRISING CONNECTION FOR IMMUNOTHERAPY
T cell cosignaling molecules may determine sensitivity to immunotherapy
By D. L. Clouthier and P. S. Ohashi
REPORTS PP. 1423 & 1428

1374 LOOKING BACKWARD TO MOVE REGULATIONS FORWARD
Rigorous ex post analyses can improve regulatory policies
By M. Cropper et al.

1375 HARMONIZING LEGAL COMPLEXITY
Bring tools of complexity science to bear on improving law
By J. B. Ruhl et al.

1376 MECHANIZED CREATURES
A new exhibition surveys five centuries of robotic invention
By P. Sareh and M. Kovac

1377 GLOBAL ROADLESS AREAS: CONSIDER TERRAIN
By R. Wu et al.

1378 RESPONSE
By P. L. Ibisch and N. Selva

1379 GLOBAL ROADLESS AREAS: HIDDEN ROADS
By A. C. Hughes

1380 CRESTING A GRAVITATIONAL WAVE
Harry Collins, a sociologist embedded in the LIGO project, recounts the discovery of a lifetime
By A. Cho

Science for life By Bruce Alberts

1446 WORKING LIFE
Creating our own community By Cecilia Sánchez and Anya Brown

ON THE COVER

Cross-sectional view of a sunflower root system. Globally, soils contain large amounts of organic carbon, more than half of which is stored at depths greater than 20 centimeters. By warming the entire soil profile, Hicks Pries et al. found that microbial decomposition of organic carbon at all soil depths is stimulated by warmer temperatures. See page 1420.
