NEWS

IN BRIEF
976 News at a glance

IN DEPTH
978 BATTLE OVER DRILLING IN ARCTIC REFUGE REIGNITES
North America’s largest and healthiest caribou herd could be at risk, conservationists fear By W. Cornwall

979 GM BANANA SHOWS PROMISE AGAINST DEADLY FUNGUS STRAIN
Consumer distrust could slip up disease-resistant variety By E. Stokstad

980 CONGRESS OFFERS DEFENSE SCIENTISTS A BIGGER PAYDAY
Legislation boosts royalties that scientists at military laboratories can get from their patented inventions By J. Mervis

981 AN EARTHLY SEARCH FOR GOLD’S COSMIC ORIGINS
Budding factory for heavy nuclei gets boost from discovery of neutron star merger By A. Cho

982 DO BACTERIOPHAGE GUESTS PROTECT HUMAN HEALTH?
Bacteria-killing viruses are taken up by human epithelial cells, among the hints that they have a role within our body By G. Guglielmi

983 SURVEY OF ARCHAEA IN THE BODY REVEALS OTHER MICROBIAL GUESTS
Methane producers in the gut may contribute to disease By E. Pennisi

FEATURE
984 TOUGHER THAN HELL
Transistors that thrive on heat and pressure could take spacecraft to the surface of Venus By P. Voosen

INSIGHTS

990 WHY DO EARTH’S EQUATORIAL WAVES HEAD EAST?
Topological effects may direct ocean and atmospheric waves near the equator By J. A. Biello and T. Dimofte

992 EDITING PEPTIDE PRESENTATION TO T CELLS
Structures reveal how high-affinity peptides are presented to induce immune responses By P. Cresswell

993 VIRUSES HIJACK A HOST IncRNA TO REPLICATE
Viruses induce a host IncRNA to rewire cellular metabolism to promote their replication By J. J. Kotzin et al.

994 AS THE EXTENSION, SO THE TWIST
Artificial internal structures blur the boundary between materials and machines By C. Coulais

996 ENHANCING THE RNA ENGINEERING TOOLKIT
The CRISPR-Cas13 system can be used to engineer RNA By L. Yang and L.-L. Chen

998 THE WAY FORWARD FOR VECTOR CONTROL
Pesticide resistance must be countered to control insects that serve as disease vectors By J. Hemingway

1000 CHANNELRHODOPSIN REVEALS ITS DARK SECRETS
A high-resolution structure of channelrhodopsin 2 provides key insights for optogenetics By K. Gerwert

1001 QUANTUM INTERFERENCE BEYOND THE FRINGE
The discovery 30 years ago of interference of pairs of photons signaled the onset of an era for quantum optics By I. Walmsley

POLICY FORUM
1003 VALUING WATER FOR SUSTAINABLE DEVELOPMENT
Measurement and governance must advance together By D. E. Garrick et al.

BOOKS ET AL.
1006 COMMON GROUNDS
A wide-ranging natural history illuminates the pleasures and the plight of wild coffee By L. Fabiani

1007 MAKING THE FUTURE
Three brothers anticipate the rise of digital fabrication By P. Shapira

24 NOVEMBER 2017 • VOLUME 358 • ISSUE 6366

Downloaded from http://science.sciencemag.org/ on November 24, 2017
Ten-month-old infants infer the value of goals from the costs of actions

by A. B. Leverkus et al.

Major role of nitrile-oxidizing bacteria in dark ocean carbon fixation

by M. G. Pachciaaki et al.

An interferon-independent IncRNA promotes viral replication by modulating cellular metabolism

by P. Wang et al.

Architecture of eukaryotic mRNA 3’-end processing machinery

by A. Casañal et al.

Control of zeolite framework flexibility and pore topology for separation of ethane and ethylene

by P. J. Bereciartua et al.

Three-dimensional mechanical metamaterials with a twist

by T. Frenzel et al.

Control of the TAPBPR–MHC I complex reveals the mechanism of peptide loading and editing

by C. Thomas and R. Tampé

Crystal structure of a TAPBPR–MHC I complex reveals the mechanism of peptide editing in antigen presentation

by J. Jiang et al.

Topological origin of equatorial waves

by P. Delplace et al.

Three-dimensional mechanical metamaterials with a twist

by T. Frenzel et al.

Crystal structure of a TAPBPR–MHC I complex defines the mechanism of peptide editing in antigen presentation

by J. Jiang et al.

Crystal structure of a TAPBPR–MHC I complex defines the mechanism of peptide editing in antigen presentation

by J. Jiang et al.

Topological origin of equatorial waves

by P. Delplace et al.

Three-dimensional mechanical metamaterials with a twist

by T. Frenzel et al.

Crystal structure of a TAPBPR–MHC I complex defines the mechanism of peptide editing in antigen presentation

by J. Jiang et al.

Crystal structure of a TAPBPR–MHC I complex defines the mechanism of peptide editing in antigen presentation

by J. Jiang et al.

Crystal structure of a TAPBPR–MHC I complex defines the mechanism of peptide editing in antigen presentation

by J. Jiang et al.

Crystal structure of a TAPBPR–MHC I complex defines the mechanism of peptide editing in antigen presentation

by J. Jiang et al.
Science 358 (6366), 975-1098.
