CONTENTS

Symposium of The American Society of Naturalists on the Scope of Biological Teaching in Relation to New Fields of Discovery:

From the Standpoint of a Zoologist: Professor Michael F. Guyer .................. 371

From the Standpoint of a Botanist: Professor M. A. Chrysler .................... 377

Experimentalism in Zoology: Professor G. H. Parker ............................... 381

The Production of Radium, Uranium and Vanadium Ores in 1913 .................. 385

The Premedical Conference ................................................................. 387

The American Chemical Society ......................................................... 387

Scientific Notes and News ........................................................................ 388

University and Educational News ......................................................... 391

Discussion and Correspondence:

Standard Units in Aerology: Professor Alexander Macauley Academic Elections: Professor W. Le Conte Stevens .............. 391

Scientific Books:

Denmore on Chippewa Music: Alice C. Fletcher Clarke on the Devonian of the State of Parana, Brazil: Dr. Charles K. Swartz .............................................. 393

Special Articles:

A New Cytological Staining Method: Orland E. White ....................... 394

The American Mathematical Society: Professor F. N. Cole ................. 396

The American Society of Naturalists: Dr. Bradley M. Davis ................. 397

The American Association for the Advancement of Science:

Section E—Geology and Geography: Professor George F. Kay ............... 398

Section G—Botany: Professor W. J. V. Osterhout .................................. 405

Societies and Academies:

MSS. Intended for publication and books, etc., intended for review should be sent to Professor J. McKeen Cattell, Garrison-on-Hudson, N. Y.

THE AMERICAN SOCIETY OF NATURALISTS SYMPOSIUM ON THE SCOPE OF BIOLOGICAL TEACHING IN RELATION TO NEW FIELDS OF DISCOVERY FROM THE STANDPOINT OF A ZOOLOGIST

The speaker must admit that upon taking time to reflect on the various ramifications of the subject announced his first reaction was one of wonder at himself for ever having agreed to enter into such a discussion; for obviously any statement must be the expression of a personal opinion influenced largely by the advocate's own training and the conditions which obtain in his local institution.

Upon roll-call one finds oneself confronted by such lusty newcomers as: ecology, animal behavior, comparative and general physiology, biochemistry, cytology, genetics, biometry, which, however, is really a method of work and not a special field of investigation; experimental zoology, a sort of general mélange which also includes some of the more special fields enumerated; experimental embryology, a subject inextricably interwoven with experimental cytology and which in recent times has sported a new offshoot—tissue-culture in vitro—already almost an ology in itself; not to omit such important applied subjects as parasitology, protozoology and the application of biological principles to human problems.

How much are we justified in letting these replace our traditional general zoology, invertebrate zoology, comparative anatomy of the vertebrates, histology and embryology? One realizes vividly the just merits of the new claimants, but when he faces the problem of deciding as to which
