FRIDAY, SEPTEMBER 16, 1921

Address of the President of the British Association for the Advancement of Science:

Sir T. Edward Thorpe.................. 231

Life in Other Worlds: Dr. W. D. Matthews. 239

George Trumbull Ladd: Professor C. E. Seashore .................. 242

Scientific Events:

The British Imperial Bureau of Mycology;
Ceramic Investigations by the United States Bureau of Mines; The Biology Club of the Ohio State University; Dr. Carl L. Alberg and the Bureau of Chemistry. 242

Scientific Notes and News.................. 244

University and Educational News.......... 247

Discussion and Correspondence:

Secular Perturbations of the Inner Planets:
Harold Jeffreys. Sporozoan Infection:
Frank G. Haughwout. Scientific Literature and Apparatus for Roumania: Professor E. G. Raczovita. American Scientific Literature for Foreign Countries: Dr. H. D. Barker. The Truth about Vivisection:
Dr. W. W. Keen.................. 248

Quotations:

Chemistry and the Public.................. 251

Special Articles:

Triploid Intersexes in Drosophila melanogaster: Dr. Calvin B. Bridges............ 252

The American Chemical Society: Dr. Charles L. Parsons.................. 254

MSS. intended for publication and books, etc., intended for review should be sent to The Editor of Science, Garrison-on-Hudson, New York.

ADDRESS OF THE PRESIDENT OF THE BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

The British Association for the Advancement of Science owes its origin, and, in great measure, its specific aims and functions, to the public spirit and zeal for the interests of science of Scotsmen. Its virtual founder was Sir David Brewster; its scope and character were defined by Principal Forbes. In constitution it differed from the migratory scientific associations existing on the Continent, which mainly served to promote the social intercourse of their members by annual gatherings, in that it was to be a permanent organization, with a settled establishment and headquarters, which should have not merely its yearly reunions, but which, "by methods and by influence peculiarly its own, should continue to operate during the intervals of these public assemblies, and should aspire to give an impulse to every part of the scientific system; to mature scientific enterprise; and to direct the labors requisite for discovery."

Although, for reasons of policy, it was decided that its first meeting of September 27, 1831, should be held at York, as the most central city for the three kingdoms, and its second and third meetings at the ancient Universities of Oxford and Cambridge respectively, it was inevitable that the association should seize the earliest opportunity to visit the metropolis of Scotland where, as an historical fact, it may be said to have had its origin.

The meeting in this city of September 8, 1834, was noteworthy for many reasons. It afforded the first direct proof that the association was fulfilling its purpose. This was shown by the popular appreciation which attended its activities, by the range and charac-
