Books on Pathology

MacCallum's Pathology
SECOND EDITION

Particularly heavy have been the additions under infectious diseases and those caused by animal parasites, wounds, the effects of poisonous gases, and the consequences of malnutrition. The sections on shock, acid-base equilibrium, hydrocephalus, immunity in tuberculosis, meningococcal infections, pneumonia after measles, influenza, cholera, and leprosy have been rewritten from personal experience.

Octavo of 1150 pages, with 555 original illustrations, many in color. By W. G. MacCALLUM, M.D., Professor of Pathology and Bacteriology, Johns Hopkins University. Cloth, $10.00 net.

Stengel and Fox's Pathology
SEVENTH EDITION

The seventh edition of this standard work is brought out after a revision so extensive that the entire book had to be reset from title page to index. Over 60 pages of matter not in the former edition, new illustrations, replacements and additions, total 100. A number of new sections have been included, and many subjects have been rewritten in the light of advanced knowledge.

Octavo of 1111 pages, with 509 text-illustrations, many in color, and 15 colored plates. By ALFRED STENGELE, M.D., Professor of Medicine, University of Pennsylvania; and HERBERT FOX, M.D., Director of the Pepper Laboratories of Clinical Medicine, University of Pennsylvania. Cloth, $8.50 net.

Mallory's Pathologic Histology

Dr. Mallory approaches his subject from the morphologic viewpoint. He so presents pathology that you are able to trace backward from any given end-result, such as sclerosis of an organ (cirrhosis of the liver, for example), through all the various acute lesions that may terminate in that particular end-result to the primal cause of the lesion.

By FRANK B. MALLORY, M.D., Pathologist to the Boston City Hospital. Octavo of 687 pages, with 683 illustrations on 497 figures, 124 in color. Cloth, $8.00 net.

Wells' Chemical Pathology
FOURTH EDITION

This work considers pathology from the standpoint of the chemical processes involved. It deals with the chemical changes that take place in pathologic conditions. It treats of the causes of disease and so provides the first step in their treatment.

Octavo of 605 pages. By H. GIDEON WELLS, M.D., Ph.D., Professor of Pathology, University of Chicago. Cloth, $7.00 net.

McConnell's Pathology
FOURTH EDITION

Dr. McConnell has carefully revised his successful book, incorporating all worth while advances in the subject. The work is a concise survey of the entire field, avoiding all unnecessary theory and discussion, adhering to the strictly practical. Technic is detailed, with formulas, etc.

Twelve mo of 611 pages, illustrated. By GUTHRIE McCONNELL, M.D., formerly Associate in Pathology, Western Reserve University, Cleveland, Ohio. Cloth, $4.50 net.

Please send me the books checked (V) and charge to my account:

NAME .......................................................... ADDRESS .................................
In the design of these Resistance Boxes and Wheatstone Bridges special attention has been given to their use in Research, Industrial and Educational Laboratories. Only the best materials are used, and each instrument receives that "personal touch" which is the true mark of quality in all laboratory apparatus.

In the Resistance Boxes and in the rheostat dials of the Wheatstone Bridges each dial contains NINE COILS of like value. Consequently there is no "kick" in the galvanometer when the dial setting is changed, because in passing from one step to the next (except from 0 to 9 or 9 to 0) the total resistance in the circuit increases or decreases by only the resistance of one coil and no greater change can occur during transition. This is not true if there are less than nine coils.

The coils of each dial are mounted securely as a unit, with the switch contacts facing downward entirely within the box, and free from dust even though the latter should find its way in under the hard rubber top. Each separate coil is wound bifilar on a brass spool with manganese wire and adjusted to within 1/10 of 1 per cent. The ratio arms of the Wheatstone Bridges are similarly constructed: they consist of coils adjusted to within 1/20 of 1 per cent. and arranged to give multiplying factors of .001, .01, .1, 1, 10, 100 and 1000.

Moulded bakelite caps cover each dial, and are marked: "units," "tens," etc. The position of the dial is indicated clearly by numbers (0 to 9) on the dial disc which appear through an opening in the dial cover. Thus the only numbers visible are those which indicate readings of the instrument and errors in observation are largely avoided. A positive "clicking" device for each dial position adds to the ease of manipulation.

Dial Pattern Resistance Boxes are supplied with one, two, three and four dials having resistances as low as 0 ohm per dial (.0 ohm per coil) and as high as 8000 ohms per dial (1000 ohms per coil).

Dial Pattern Wheatstone Bridges are furnished with either single or double ratio arm dials and either four or five rheostat dials.

From the wide variety listed in our Bulletin S-1000 the following are most popular:

SCIENTIFIC INSTRUMENTS

1211-13 ARCH ST.

PHILADELPHIA
THE Laboratory Hydrogen Ion Potentiometer is a double-range instrument, reading directly in pH units or in millivolts. It gives the high accuracy needed for laboratory determinations of H-ion concentration, and yet is operated with an unusual degree of convenience and speed.

Measurements are made in pH units with the .1N calomel electrode at 25° C., — accuracy of potentiometer, ± .01 pH unit. Measurements are made in millivolts with any calomel electrode at any temperature, — accuracy, ± .5 millivolt.

The assembly illustrated is adapted to work with plant juices, water extracts of wheat flour and dough, and similar solutions. It consists of:

- Laboratory Hydrogen Ion Potentiometer
- Bailey Hydrogen Electrode
- 2420-c Galvanometer
- 7308 Standard Cell
- 7665 Storage Cell
- 7691 L & N Calomel Electrode
- 7595 Vessel

Price, as illustrated, excluding beaker, salt-bridge, clamp and stand. $258.00

The galvanometer is equipped with a 4-volt lamp. For use on 110 volts, the No. 2168 Resistance Unit, or for 220 volts, the No. 2169 Resistance Unit is needed. The price of either the No. 2168 or 2169 is $5.00.

The Hydrogen Ion Potentiometer and some assembled equipments are described in Bulletin S-789.

FURFURAL AS A BIOLOGICAL REAGENT

FURFURAL is an excellent preservative for Biological Specimens.
FURFURAL can be more conveniently used as an injection fluid than the usual preparations.
FURFURAL has many other uses of importance to the Biologist. See "Furfural as a Biological Reagent", by Prof. C. E. Tharaldsen, Science, Vol. LVII, page 385, March 9, 1923.

A pamphlet on Furfural will be sent on request.

THE MINER LABORATORIES

CANTERIDGE INSTRUMENTS

Cambridge A. M. Galvanometer

This galvanometer has been designed to provide a simple and inexpensive galvanometer of high sensitivity, with characteristics suitable for general laboratory work and for students' use.

The coil and magnet are of the form which has been found to give the highest sensitivity for any given period.

With a period of seven seconds, and scale distance one metre, the following sensitivities are obtainable:

- Coil: 7 ohms, deflection 105 mm. per microampere
- 20 ohms, deflection 160 mm. per microampere
- 150 ohms, deflection 365 mm. per microampere
- 1000 ohms, deflection 800 mm. per microampere

## THE COLEMAN & BELL COMPANY

**MANUFACTURING CHEMISTS**

**NORWOOD, OHIO**

Chemical Indicators and C. P. Organic Chemicals.
Biological Stains and Reagents of Highest Quality.
Made in U. S. A.
For Measuring Vacuums—

The McLeod Vacuum Gauge is a practical and scientifically accurate instrument for measuring vacuums from 200 microns to half a micron. Each gauge is calibrated and the scale marked directly in microns, making mathematical calculations unnecessary.

This type of gauge is used extensively in the laboratories and factories of the General Electric Company and is now available for use elsewhere.

The McLeod Gauge is furnished in either natural wood or mahogany finish. It can be purchased from the General Electric Company direct, or from

James G. Biddle

Central Scientific Company
Chicago, Ill.

General Electric Company
Schenectady, N. Y.

The research laboratories of the General Electric Company, at Schenectady, have been identified with scientific progress for many years. From them have come many materials and processes of incalculable value to industry as well as to the advancement of Science.
JAQUET GRAPHIC CHRONOMETER

THE TEST
IN OUR STOCK FOR IMMEDIATE SHIPMENT
OF SERVICE

JAQUET GRAPHIC CHRONOMETER. The most precise portable instrument for graphic time records, consisting of an accurate clockwork with anchor escapement; two dials on one side, one of which totals seconds and the other minutes of operation. A small lever placed beneath the box brings both hands back to zero. This lever also makes electric contact, so that by using the terminals beside the large dial, the precise moment of the beginning of an observation can be recorded by connecting with a Signal Marker.

The lever on the left-hand side stops and starts the instrument. With the use of a third electric contact, the Chronometer can also be used to record the time at a distance by means of a signal. A screw behind the writing lever permits of the precise adjustment of same by means of a small spring. When the instrument is used to record in a horizontal position, the adjusting screw of the writing lever should be unscrewed in order to stretch the spring, as in this position the weight of the writing lever is removed.

The instrument is now supplied in two executions; one recording in intervals of 1 and 1/5 seconds, and the other in 1/5, 1, 3 and 6 seconds.

On special order, the Chronometer can be supplied to record intervals of 10, 30 and 60 seconds. The degree of precision attained in the design and construction of this instrument is remarkable in that the probable error lies between .0002 and .0006 seconds of time, resulting in a linear error on the record of less than 1/10 mm where the speed of the paper is 20 cm per 1/5 second.

The instruments are mounted in handsome containing case.
