FRIDAY, NOVEMBER 5, 1897.

CONTENTS:
The Geological Congress at St. Petersburg: J. H. Stevenson .................................................. 673
A New Investigation of Man's Antiquity at Trenton, I: HENRY C. MERCER; II: ARTHUR HOLICK .... 675
Diversity of Languages: RICHARD T. COBURN .............................................................. 682
Geology and Geography at the American Association for the Advancement of Science: C. H. SMYTH, JR. 688
Geological Society of America: C. H. SMYTH, JR. 691
Regeneration in Oligochaete Worms .............................................................. 692
The Survey of the Forest Reserves: W. F. MORSELL .................................................. 694
Current Notes on Anthropology:—
Maya Day Symbols; The Viking Club: D. G. BRINTON .................................................. 695
Botanical Notes:—
A Model Natural History Survey Bulletin; The Useful Fiber Plants of the World: CHARLES E. BESSERY .............................................................. 696
Scientific Notes and News:—
Report of the Secretary of Agriculture; Geological Survey of West Virginia; The New York Zoological Park; The International Leprosy Conference; General .............................................................. 697
University and Educational News .............................................................. 702
Discussion and Correspondence:—
Organic Selection: THOMAS DWIGHT. A Gasoline Launch for Field Work: G. D. HARRIS ............ 703
Scientific Literature:—
Societies and Academies:—
The Biological Society of Washington: F. A. LUCAS. University of Wisconsin Science Club: WM. S. MARSHALL .............................................................. 707
Scientific Journals:.............................................................................................................. 708
New Books .......................................................................................................................... 708

MSS. intended for publication and books, etc., intended for review should be sent to the responsible editor, Prof. J. McKeen Cattell, Garrison-on-Hudson, N.Y.

THE GEOLOGICAL CONGRESS AT ST. PETERSBURG.

The Seventh International Geological Congress convened at St. Petersburg, Russia, on August 29, 1897, in accordance with the Czar's invitation, presented at the Fifth Congress in 1891.

The enrollment far exceeded that of any previous Congress, the preliminary list showing 966 names, of which only 270 were of Russians. The final list has about 1,100, about 120 of them being American.

The arrangements were upon an imperial scale. Free transportation on all Russian railroads was provided not merely for the members, but also for their families. Excursions were given such as no other Congress can expect, unless, indeed, another meeting be held in Russia. A guide book of 660 pages, with many maps, plates and sections, was prepared, giving detailed information respecting the geology of regions to be visited, a most valuable contribution to geological literature, making accessible, to geologists all over the world, facts previously published for the most part only in proceedings of scientific societies and sealed up in the Russian language.

Three excursions preceded the Congress. That to the Ural Mountains, shared in by somewhat more than 200 members, was in charge of Dr. Tschernychew and lasted for four weeks. This, extending beyond railroad and all other ordinary means of trans-
