Weston Model 412

Vacuum Thermo Couple Type Portable Precision Instrument

Model 412 Vacuum Thermo Couple precision instruments are made as milliammeters, ammeters, and voltmeters. They are especially useful in the measurement of current and voltages at audio frequency, such as, in determining the impedance of telephone receivers, etc.; and for the measurement of current or voltages of irregular wave form, as, for example, the currents from spark coils.

For use on either A. C. or D. C., the voltmeters are accurate on frequencies up to and including 3000 cycles. Voltmeters with a range of one volt have a sensitivity of 125 ohms per volt. For ranges of 5 volts or over these voltmeters can be made with a sensitivity as high as 500 ohms per volt. They can also be made as millivoltmeters with ranges as low as 300 millivolts.

Milliammeters and Ammeters are made in ranges from 2 milliamperes and up and are accurate on all frequencies including radio frequencies.
