POCKET MICROSCOPE

For any degree of Magnification from 30X to 200X

The entire stand of this new microscope is a one-piece hollow casting of aluminum alloy which makes the instrument rigid and at the same time light in weight. Net weight 11 oz.

The initial magnification is increased by elongating the draw tube and the magnifications thus obtained are read off from the graduations on the tube.

The optical system consists of an orthoscopic eye-piece and a standard achromatic objective which insures good definition.

May also be used for micro-projection drawing and photomicrography.
