Castle Incubators are Ventilated by Heated Air

Success in incubation year in and year out depends upon absolute constancy and uniformity of temperature.

Castle triple walled incubators give this surety because:

1. Combination of water and air jackets prevents temperature fluctuation.
2. Continual circulation of freshly heated air prevents one part of chamber being at a higher or lower temperature than standard.

These are the finest examples of scientific incubator manufacture. They are made in many sizes and models. Ask for the Incubator Bulletin which gives specifications and prices.
