JOHNS HOPKINS UNIVERSITY
SCHOOL OF MEDICINE

The School of Medicine is an Integral Part of the University and is in the Closest Affiliation with the Johns Hopkins Hospital.

ADMISSION

Candidates for admission must be graduates of approved colleges or scientific schools with two years' instruction, including laboratory work, in chemistry, and one year each in physics and biology, together with evidence of a reading knowledge of French and German.

Each class is limited to a maximum of 75 students, men and women being admitted on the same terms. Applications may be sent any time during the academic year but not later than June 15th.

If vacancies occur, students from other institutions desiring advanced standing may be admitted to the second or third year provided they fulfill the requirements and present exceptional qualifications.

INSTRUCTION

The academic year begins the Tuesday nearest October 1, and closes the second Tuesday in June. The course of instruction occupies four years and special emphasis is laid upon practical work in the laboratories, in the wards of the Hospital and in the dispensary.

TUITION

The charge for tuition is $400 per annum, payable in two installments. There are no extra fees except for certain expensive supplies, and laboratory breakage.

Inquiries should be addressed to the Executive Secretary of the School of Medicine, Johns Hopkins University, Washington and Monument Sts., Baltimore, Md.

Graduates in Medicine who satisfy the requirements of the heads of the departments in which they desire to work are accepted as students for a period not less than three quarters. Tuition charge is $30 a quarter.

WANTED

at the Calcutta School of Tropical Medicine

a whole time Research Worker for research work on infectious diseases of the bowels with special reference to industrial areas.

Pay Rs 1,250/- per mensem rising by annual increments of Rs 50/- to a maximum of Rs 1,500/- per mensem plus a nonpractising allowance of Rs 500/- per mensem. The appointment will be for three years in the first instance with a possibility of extension. The agreement will be terminable on three months' notice on either side. One month's leave on full pay yearly. First class passage to India. Any one who intends to apply may obtain information as to condition of life and work in Calcutta from Professor Asa C. Chandler, Rice Institute, Texas. Apply to—

School of Tropical Medicine and Hygiene, Calcutta.
McGRAW-HILL ANNOUNCES

Published March, 1928

Swingle's

Text Book

OF

Systematic Botany

By Deane B. Swingle
Professor of Botany, Montana State College

253 pages, 6 x 9, 61 illustrations, $2.00

McGraw-Hill Publications in the Agricultural and Botanical Sciences

A TEXTBOOK presenting in logical sequence the principles of plant taxonomy and nomenclature and discussing representative families of plants. The book is applicable to all parts of the country.

CONTENTS:

Part I

PRINCIPLES AND METHODS

Part II

FAMILIES OF SPERMATOPHYTA

Send for a copy on approval

ELEMENTS OF PHYSIOLOGY
For Students of Medicine and Advanced Biology

By ERNEST G. MARTIN, Ph.D. and FRANK W. WEYMOUTH, Ph.D.
Professor of Physiology and Associate Professor of Physiology
Stanford University, California

Octavo, 784 pages with 133 engravings. Cloth, $8.00, net

Physiology is here presented by development of two key-principles. The first is the familiar key-principle—that living protoplasm is a system of molecules and ions, hence understanding of its structure and functioning is sought by applying to it the physical physico-chemical and chemical laws which describe the interrelations of molecules and ions. The first section contains an account of the nature and capacities of protoplasm as revealed by observation and experimentation.

The second section deals with the principle that every protoplasmic cell is inherently a self-sustaining system. Consequently, if it is continuously provided with a proper environment, it should continue to live and function indefinitely (subject to the possible influence of intrinsic senility). Accordingly the task of Physiology, after examining the properties of protoplasm, is to enquire as to the factors of suitable cell environment, and the limits of departure from the optimum for each. In a highly organized body, like that of man, the maintenance of proper cell-environment depends on the interaction of various complex mechanisms. The third section is concerned with these. Since bodily maintenance must be carried on in the presence of a changing external environment various adjustments of the organism as a whole are necessary. The fourth section considers these. A final chapter deals with Reproduction.

The authors have produced a textbook that (1) presents concisely and clearly those elementary facts and principles of Physiology which every qualified student should have at command; (2) refers at each step in the development to readily accessible monographs and bibliographies dealing with the matter under discussion.

Systematic Laboratory Studies of
FIELD CROPS and WEEDS

By CHARLES A. MICHELS, B.S., M.S.
Former Assistant Professor of Field Crops, Massachusetts Agricultural College

12mo, 298 pages, illustrated. Cloth, $2.75, net

Publication of these studies has been prompted by the thought that the bringing together of certain taxonomic field crop materials from many sources in a single volume would fill a long felt need for teachers of field crops. The material presented has been used by the author over a number of years in the different courses in field crops at the Massachusetts Agricultural College. It has been reorganized and new projects introduced to meet, as far as possible, the suggestions of the Committee of the American Society of Agronomy on laboratory work.

The studies presented in this book will provide a sufficient program for detailed study as well as a basis for understanding the broader implications of the most important field crops. The exercises on any specific crop are so planned that each study is complete in itself, yet the studies are so organized that they progressively develop into a more detailed and ample study.

A Laboratory Guide in
BACTERIOLOGY
Particularly for Students in Dentistry

By J. L. T. APPLETON, JR., D.D.S. and C. K. BRYANT, B.S.
Professor of Microbiology and Bacterio-Pathology and Assistant Professor of Microbiology and Bacterio-Pathology
Dental School, University of Pennsylvania

12mo, 223 pages with 23 engravings. Cloth, $2.75, net

A background of fifteen years’ experience in teaching bacteriology to dental students should be ample surety as to the value of this book in practical application to class work. The authors are in complete harmony with the present tendency to lay greater stress on the laboratory work of the course. This book will save the instructor much valuable time as it lays out a course of from one hundred and twenty to one hundred and forty hours. Instead of slurring the descriptions of technical procedures (a common fault) it gives explicit instructions which have only to be followed by the student to save much time and discouragement.
