

## These Seven Points make the FFSA the logical laboratory microscope

- 1—The **Objective Elements** are mounted in threadless metal cells. This means that they will always remain in perfect alignment and that distance between the lens elements is maintained unalterably.
- 2—The **Body Tube** is of fixed length to insure best performance of objectives at all times.
- 3—The **Abbe Condenser** is divisible for various types of illumination and to allow the use of a special element for dark field work.
- 4—The **Patented Side Fine Adjustment** is exceedingly slow in action and has automatic takeup for wear. One adjustment head is graduated to read 2.5 microns of vertical movement. The adjustment automatically ceases to act when objective touches the slide.
- 5—The **Improved Rack and Pinion Substage** gives long range of movement.
- 6—The **Built-on Mechanical Stage** is easy to operate and gives plenty of room for manipulation. It can be quickly removed.
- 7—The **Bausch & Lomb Optical Company's** trade mark represents the experience of seventy-five years of optical work.

ORGANIZED IN 1873

ANNOUNCEMENT

may be obtained by application to

THE REGISTRAR  
80 East Concord Street,  
Boston, Massachusetts

## JOHNS HOPKINS UNIVERSITY SCHOOL OF MEDICINE

The School of Medicine is an Integral Part of the University and is in the Closest Affiliation with the Johns Hopkins Hospital.

### ADMISSION

Candidates for admission must be graduates of approved colleges or scientific schools with two years' instruction, including laboratory work, in chemistry, and one year each in physics and biology, together with evidence of a reading knowledge of French and German.

Each class is limited to a maximum of 75 students, men and women being admitted on the same terms. Applications may be sent any time during the academic year but not later than June 15th.

If vacancies occur, students from other institutions desiring advanced standing may be admitted to the second or third year provided they fulfill the requirements and present exceptional qualifications.

### INSTRUCTION

The academic year begins the Tuesday nearest October 1, and closes the second Tuesday in June. The course of instruction occupies four years and especial emphasis is laid upon practical work in the laboratories, in the wards of the Hospital and in the dispensary.

### TUITION

The charge for tuition for 1929-30 will be \$600 per annum, payable in two installments. There are no extra fees except for certain expensive supplies, and laboratory breakage.

Inquiries should be addressed to the Executive Secretary of the School of Medicine, Johns Hopkins University, Washington and Monument Sts., Baltimore, Md.

Graduates in Medicine who satisfy the requirements of the heads of the departments in which they desire to work are accepted as students for a period not less than three quarters. Tuition charge is \$50 a quarter.

## A NEW JOURNAL OF PHYSICS THE PHYSICAL REVIEW SUPPLEMENT

*Issued Quarterly by the*

AMERICAN PHYSICAL SOCIETY

*and devoted to*

### Studies in Contemporary Physics

Contents of First Issue, July 1, 1929

Values of the General Physical Constants  
—R. T. BIRGE  
Statistical Theories of Matter, Radiation  
and Electricity —K. K. DARROW  
Evidences for the Corpuscular Character of  
Radiation —A. H. COMPTON

These articles will appeal especially to high school, college and university teachers of Physics and Chemistry. They will be written so that those who are not specialists will receive a clear, interesting and reliable view of those things which make contemporary Physics so fascinating.

Those who subscribe prior to July 1 will receive an off-print on stiff cardboard of the tables of physical constants as evaluated by Birge.

Subscription rate \$4.00 per year

(To members of the American Physical Society or American Chemical Society, \$3.00 per year.)

### Physical Review Supplement

Minneapolis, Minnesota

## Two Interesting New Books in Psychology

### GENERAL PSYCHOLOGY FOR COLLEGE STUDENTS

*To be  
published  
in  
August*

### SYSTEMATIC PSYCHOLOGY: PROLEGOMENA

*To be  
published  
in  
June*

**By CARL NEWTON REXROAD**

*Professor of Psychology at Stephens College*

This textbook provides for freshman or sophomore courses an approach to psychology through the examination of scientific methods and principles. It offers, without polemics, a clear presentation of the postulates and point of view from which behavioristic psychology works; a study of the application of biological concepts, particularly the concept of gradient, to the problem of understanding human construction and behavior; an analysis of the various types of learning in terms of conditioned responses with a description of the development of human behavior in the light of this analysis; and a reinterpretation of data collected by psychologists working from other points of view.

The author has been unusually successful in giving the student a practical understanding of the problems of human behavior and in making the development logical, the treatment concise, the style simple, clear, and direct.

**By EDW. BRADFORD TITCHENER,**

*late Sage Professor of Psychology in Cornell University.  
Edited by H. P. WELD, Professor of Psychology  
in Cornell University*

This volume contains all that was written of Professor Titchener's final judgment in the solution of a problem to which he had dedicated his professional life, namely, the establishment of psychology as a science coördinate with biology and physics.

He proposes definitions of psychology, biology, and physics, in both formal and material terms, that of biology in particular being both new and unique. The book is of interest no less to systematic biologists and physicists than to psychologists. It reflects the intimate knowledge of a worker in science together with a broad historical background, a sympathetic and critical insight, and the literary skill for which the author is so well known.
