VELOCITY OF CHEMICAL REACTIONS

It is well known that different chemical reactions progress with greatly different velocities. For examples, the oxidation and drying of linseed oil extends over a period of days, while the explosion of gasoline vapors is completed in a small fraction of a second. In most cases where velocities of reactions are recorded they are expressed as the total mass transformed per unit of time, \( \frac{dc}{dt} \), and the absolute time required for the transformation of individual molecules is ignored or can not be estimated because there are very few methods for studying intramolecular mechanics and dynamics. In the case of explosions, however, data are available for the estimation of the time required for the reaction to proceed from molecule to molecule, as the following calculations will show.

When nitroglycerine explodes according to the reaction:

\[ 4 \text{C}_3\text{H}_5(\text{NO}_3)_3 \rightarrow 12 \text{CO}_2 + 10 \text{H}_2\text{O} + 6 \text{N}_2 + \text{O}_2 \]

the explosive wave travels at the rate of five miles per second through the mass.\(^1\) It might be argued that the explosive wave precedes the course of the chemical reaction, but since the exact nature of the former is unknown, it seems reasonable to conclude that it merely measures the progress of the chemical reaction from molecule to molecule. With this assumption the following calculations can be made.

The molecular weight of nitroglycerine is 227.1 and its density is 1.6, giving a molecular volume of 141.9 cc. Assuming this volume of nitroglycerine to be in the form of a cube, each edge will be \( \sqrt[3]{141.9} \) cms and will contain \( \phi(6.98)(10)^{12} \) molecules, or \( (1.622)(10)^7 \) molecules per linear centimeter. In five miles there are \( (8,047)(10)^4 \) cms, so that a chain of nitroglycerine molecules five miles long, spaced as they are in the liquid, contains \( (1.305)(10)^{13} \) molecules. Since the reaction proceeds from the first of these to the last one in one second, the time required for the explosion to go from molecule to molecule is \( \frac{(1.305)(10)^{13}}{(7.661)(10)^{-14}} \) seconds.

To conceive of this infinitesimal time, let us compare it to one second, which is the time of explosion of the entire mass and also approximately the lowest perceptible time unit. Making this comparison, since one year contains \( (3.1536)(10)^7 \) seconds, we find that 414,000 years bear the same relation to one second that one second bears to the time between successive explosions. In other words, if a being could take the time of a molecular explosion for his smallest perceptible time unit, then one of our seconds would bear the same relation to his time value that a geologic age does to our second.

In the above reasoning the assumption is made that a molecule of nitroglycerine explodes, sending out a wave of energy which upon striking the next molecule causes its explosion, whereupon the process is repeated; the disruption of the original molecule is assumed to be completed by the time its explosive wave has initiated the explosion of the next molecule; finally, the explosion of each molecule is assumed to be dependent upon energy received from the molecule immediately preceding. Under these conditions the time which we have calculated, namely \( (7.661)(10)^{-14} \) seconds, represents the time required for a molecule both to complete its own explosion and to initiate the explosion of its neighbor through an energy transfer. It is impossible to estimate the relative times required for these two processes; however, it is at least true that the time of the individual molecular reaction is less than the number calculated.

While at present it is impossible to follow the breaking down of such individual molecules, and although thermodynamics as yet can not treat such reaction rates, still it can be concluded that with some chemical reactions their infinitesimal times bear a ratio to the times of human experience that the latter do to geologic and astronomical times.

NEW SCIENTIFIC BOOKS

HARVEY-GLISSON, R. J. Two Thousand Years of Science. Pp. vii + 362. 121 figs. Macmillan. $4.00.

The Journal of General Physiology
EDITED BY W. J. CROZIER & JOHN H. NOETHEROP W. J. V. OSTERHOUT
Contents of Volume 13, No. 2, November 20, 1929:
MIRSKY, A. E., AND ANSON, M. L. Protein coagulation and its reversal. The reversal of the coagulation of hemoglobin.
KRÜGER, A. P., AND TAMADA, H. T. The preparation of relatively pure bacteriophage.
EMERSON, ROBERT. Measurements of the metabolism of two protozoans.
EMERSON, ROBERT. Some properties of the pigment of Blepharisma.
EMERSON, ROBERT. On the behavior of nickel carbonate in relation to photosynthesis.
ABRAMSON, HAROLD A. Electrokinetic phenomena. I. The adsorption of serum proteins by quartz and paraffin oil.

THE JOURNAL OF GENERAL PHYSIOLOGY, founded in 1914 by Dr. Jacques Loeb, contains practically all the investigations of Dr. Loeb after that time. There are, in addition, contributions by many leading physiologists, both in this country and abroad. It has now been decided to offer a complete set of the back volumes at half price to new subscribers. The first twelve volumes complete may therefore be obtained for $30.00 by new subscribers until December 31, 1929.

SUBSCRIPTION PRICE PER YEAR (ONE VOLUME), $5.00.
PUBLISHED DUMONTHLY BY THE ROCKEFELLER INSTITUTE FOR MEDICAL RESEARCH NEW YORK, N. Y.

John Dewey says:
"It is an event of the first intellectual order"

PROCESS and REALITY
By A. N. WHITEHEAD
Author of Science and the Modern World and Religion in the Making
"It is not too much to say that Mr. Whitehead's last book... is more than a fore-runner of the revival of systematic philosophies. It belongs in scope and intent with the great classic systematization of history."
—John Dewey in the N. Y. Sun.
"It will be considered one of the greatest intellectual achievements of this age."—Henry N. Wieman.
At bookstores $4.50
THE MACMILLAN COMPANY NEW YORK

A New Book
The Fundamentals of RADIO
(372 pages, 6" x 9", 402 figures.)
A text-book for students of radio giving the fundamental theories and their applications to modern practice. It explains many theoretical and practical points which have not found their way into other books.
A new 1929 edition of EXPERIMENTAL RADIO.
A laboratory manual of radio experiments.
(255 pages, 128 experiments.)
"Ramsey manages to supply that missing fact which seems to be hidden in other books."
Price postpaid
Fundamentals of Radio $3.50
Experimental Radio $2.75
University Book Store, Bloomington, Indiana.
Research Vacancies

The National Research Council of Canada will shortly appoint to its technical staff two junior researchers whose aptitude and experience are along lines of research in (1) Heat, (2) Aeronautics.

These researchers will be required to give immediate attention to problems dealing with (1) Conduction and Insulation of Heat; (2) Aerodynamics, Hydrodynamics and Aircraft Engines.

Interested applicants should communicate immediately, stating age, education, research experience, references and salary required to S. P. Eagleson, Secretary, National Research Council of Canada, Ottawa, Canada.
PHOTOELECTRIC CELLS
Television—Talking Pictures—Research
G.-M. VISITRON cells of the alkali metal hydride type are of highest sensitivity, low dark current, long life, and respond to the smallest changes of light intensity and color. Their high quality and uniform sensitivity make them the choice of leading engineers. Get technical Bulletin P-14 Free.

LIVING BULLFROGS
Safe delivery guaranteed
Teach Biology with live specimens where practicable
We have the only complete live materials establishment in America. Live plants and animals representing all types are kept on hand under semi-natural conditions at all seasons.
Also headquarters for preserved specimens of all types, microscopic slides, life histories, demonstrations, oistolological preparations, insect collections. We specialize in many important southern species not obtainable elsewhere.
All material guaranteed without reservations.
SOUTHERN BIOLOGICAL SUPPLY CO., INC.,
Natural History Building, New Orleans, La.
