DR. KARL LANDSTEINER

NOBEL PRIZE LAUREATE IN MEDICINE, 1930

By Professor STANHOPE BAYNE-JONES

THE UNIVERSITY OF ROCHESTER

It would be fitting to dedicate a meeting of the American Association of Immunologists to the celebration of the award of an honorable international prize to a great immunologist. It is especially appropriate for us to dedicate this meeting to the celebration of the award of the Nobel Prize in Medicine for 1930 to one of our former presidents—Dr. Karl Landsteiner. The association takes this first opportunity it has had, since he gained that well-deserved recognition of his accomplishments, to give him from this group what he has received from his individual friends—adoration for his scientific achievement.

1 Presidential address delivered at the annual meeting of the American Association of Immunologists, April 1, 1931, at Cleveland, Ohio. From the Department of Bacteriology, School of Medicine and Dentistry, University of Rochester, Rochester, New York.

confidence in the power of his methods of research to solve many of the problems of specificity, gratitude for the useful facts which his discoveries have placed in our hands, and an expression of affectionate personal esteem.

Dr. Landsteiner has done his work in several cities which could take pride in his achievements. A glance at his curriculum vitae and the list of more than 200 of his publications will show why this is so. It will be seen that no claim can equal that of Vienna, his birthplace and the place where all his fundamental work was begun and much of it completed. But for many years he has been at work at the Rockefeller Institute in New York, and the contributions from his laboratory there have formed a most significant part of the immunological literature of this country.
