THE MAYA LUNAR COUNT

By Dr. Carl E. Guthe

Director of the Anthropological Museum, University of Michigan

My subject concerns certain aspects of the indigenous calendar of the Maya Indians of Middle America. This time count consisted of named days and months associated with short number series which, in principle, is closely similar to our own calendar. The dates thus obtained, analogous to our term “Tuesday, the 29th of December,” were located, during the earlier period of their civilization, in a count of days from an hypothesized starting point in a manner identical to the system used by European astronomers when they compute in terms of “Julian days.” Because of this “Long Count” the many dates recorded in stone during the earlier period are accurate to within a day with relation to one another. For further details concerning the mechanics of this calendar, I refer you to a number of publications.

An outline of the history of the remarkable Maya civilization has been obtained in terms of this native calendar. Because of the influence which this group of people exerted both directly and indirectly upon the majority of the indigenous civilizations of the New World it is of great importance that the Maya calendar be expressed in terms of the European calendar. The problem is to determine the numerical con-
