Blakiston Books

YOUNGKEN—Textbook Of Pharmacognosy, 3rd Edition
It discusses pharmacognosy from both the morphologic and taxonomic viewpoints. It is used as a systematic textbook, also for practical work by the drug analyst, pharmacognosist, pharmacist, drug collector, etc. It gives synonyms, titles, habitats, ash, purity limits, physical characteristics, microscopic structure, constituents of crude drugs of U. S. Pharmacopoeia, National Formulary, and many commercial materials. Many tables and the latest advances in technic are included.
367 Illustrations (700 Figures) 817 Pages. Cloth $6.00

ROBBINS and RAMALEY—Plants Useful To Man
It presents in a direct way those phases of botany that are of genuine human interest—the economical, cultural, commercial, medicinal, ornamental sides.
241 Illustrations. Cloth $3.00
By Prof. W. W. Robbins (California) and Prof. Francis Ramaley (Colorado)

BARTON-WRIGHT—Recent Advances In Plant Physiology, 2d Edition
This book covers the main problems of recent work in plant physiology with stress upon the economic aspects.
54 Illustrations. Cloth $4.00
By E. C. Barton-Wright, F.R.S.E. (Edinburgh)

SMITH—Recent Advances In The Study Of PLANT VIRUSES.
The first comprehensive account of the vast amount of work done in the study of plant virus diseases. It covers technique and makes comparisons of plant and animal viruses.
68 Illustrations. Cloth $4.00
By K. M. Smith, Ph.D. (Cambridge)

SANSOME and PHILP—Recent Advances In Plant Genetics.
Problems of great importance are discussed in this book. The authors are interested in creating new varieties for farmer and gardener and are actively engaged in research.
56 Illustrations. Cloth $4.00
By F. W. Sansome, F.R.S.E. and J. Philp, F.L.S. John Innes Horticultural Insti. (Eng.)

MENNELL—Physical Treatment By Movement, Manipulation and Massage.
It presents the rationale of massage treatment, various forms of mobilization, Swedish movements, exercises in detail for each condition, etc.
274 Illustrations. 32 Plates, 8 In Color. Cloth $6.00
By J. B. Mennell, M.D. (Cantab.) St. Thomas's Hospital, Lond.

A REPORT TO THE
TERMITE INVESTIGATIONS COMMITTEE
TERMITES AND TERMITE CONTROL
A Book Intended Primarily for Biologists,
Architects, Engineers, Contractors,
Building Inspectors, and
Users of Wood
A Discussion of the Biology of Termites, and an Account of
the Termites of the United States, Mexico, the Canal Zone,
the West Indies, Hawaii, and the Philippine Islands, with
Recommendations for Prevention and Control by Methods of
Construction and the Use of Chemically Treated and Un-
apalatable Woods.
Price $5.00
(900 pages, 181 figures and illustrations in text)
N.B.—Thousands of dollars have been expended upon the
necessary research and the preparation of the material
of this volume, but none of this expense has been added to
the publication cost. Thus it is possible to sell the book at
this reasonable price. Any profits accruing from the sales
of this book will go toward further research on termites.

The Journal of
Nutrition
Published monthly by The Wistar Institute of Anatomy and Biology beginning with No. 1 of Vol. 7, issued on
January 10, 1934.
This journal will continue its same high scientific standard under the editorial management of an internationally
known group of biochemists and nutrition experts.
The Journal of Nutrition is the official organ of the American Institute of Nutrition.
Two volumes of 600 pages each will be published during a year. Price per volume $5.00 domestic, $5.50 foreign.

OCCASIONAL PUBLICATION NO. 1 OF THE AMERICAN
ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE
A summary which clarifies for the first time many
of the problems arising in connection with inventions
made by scientists from the social, economic and
legal viewpoints. A balanced, frank and realistic
picture is presented of the points to be considered
when an important invention is involved from the
standpoint of the individual investigator or his insti-
tution.

A Swift Messenger in Time of Need

To everybody there comes, suddenly, the great emergency — the occasion when, regardless of all else, the desperate human need stands first and alone.

To find somebody, to carry word to somebody, to get somebody’s advice, to bring somebody quickly, to learn somebody’s final answer is for the moment the one, all-important purpose.

Have you ever stopped to consider how great a part the telephone plays in the meeting of such emergencies?

Even our daily routine is a succession of lesser emergencies. Satisfactory living in this complicated world consists largely in grasping situations as they arise, one after another — solving each promptly, finally, and getting on to the next. We dare not be always just a little too late.

It is because of all this that the telephone is so essential and helpful in the daily life of so many people. To millions of homes it brings security, happiness and the opportunity for larger achievement.

Your home is safer — life moves more smoothly — when you have extension telephones in the rooms you use most. The cost is small, especially when you consider the time and steps saved, the increased comfort and privacy. Installation can be made quickly, at the time you set. Just call the Business Office of your local Bell Telephone Company.
FOR HIGH PRECISION IN MEASURING ELECTROLYTIC CONDUCTIVITY

This Bridge is based on the studies of Professor Grinnell Jones of Harvard, and makes possible a new and higher order of precision in measurements of electrolytic conductivity.

The resistors in the Jones bridge have, at 2000 cycles p. s. or less, an effective a.c. resistance that is within 0.001 percent of their d.c. resistance. Residual capacitances and inductances are negligible. These unusual characteristics arise from the fact that the resistors are not wound, but are woven to a recently developed pattern.

For checking or calibration, each resistor may be compared directly with Bureau of Standards type standards, without the use of auxiliary apparatus. The ratio coils are adjusted to within 0.01 percent of each other, and are connected by a slidewire, so that the ratio arms may be brought to exact equality. Condensers are provided for balancing residual capacitances, including that of the conductivity cell. A modified Wagner earth connection is provided for bringing the detector to earth potential. Shielded transformers for input and output are provided. In brief, great precaution has been taken to make this instrument capable of the highest precision. We shall be glad to send complete details on request.
